I. Introduction

I.A. Purpose

The Wisconsin Emergency Response Plan (WERP) is a comprehensive all-hazards plan developed by the authority of Chapter 323 of the Wisconsin Statutes, which provides for a statewide program of emergency management. Attachment 1 identifies additional legal authorities relevant to the WERP.

As a home rule state, Wisconsin recognizes that the safety and well-being of every resident of every jurisdiction in the state are the responsibility of the senior elected officials at the lowest level of government affected by an emergency. It is the premise of this plan that all levels of government share the responsibility for working together in preventing, preparing for, responding to, and recovering from the effects of an emergency or disaster incident.

Together with relevant state and federal law and with its supporting plans and documents, this plan:

I.A.1. Facilitates the protection of lives, property, and the environment in major disasters of any nature.

I.A.2. Coordinates support to local governments as requested for disaster response, damage assessment, identification of mitigation opportunities, and implementing recovery efforts.

I.A.3. Coordinates supporting plans outlined in Attachment 2, emergency support functions (ESFs), annexes, attachments, and appendices.

I.A.4. Provides emergency management policy for administration officials, agency managers, and emergency managers before, during, and after a disaster.

I.A.5. Supersedes all Wisconsin emergency response and operations plans promulgated prior to the publication of this plan.

I.B. Scope

This plan considers the emergencies and disasters likely to occur in Wisconsin and describes the:

I.B.1. Responsibilities delineated by state and federal law, regulation, administrative rule, executive order, and policy.

I.B.2. Roles and responsibilities of state agencies and their relationship to local, county, tribal, federal, volunteer agencies, and private sector partners involved in emergency management.

I.B.3. Functions and activities necessary to implement the National Preparedness System’s five mission areas: Prevention, Protection, Mitigation, Response, and Recovery.

I.B.4. Sequences and processes that trigger phases and levels of emergency activation.

I.B.5. Use of government, private sector, and volunteer resources during emergencies.

I.B.6. Application of information collected or recorded, decisions made, and procedures developed in the planning process, during response, and in the after-action review following emergency operations or training events.

II. Planning Assumptions

II.A. Threat Assessment and Vulnerability

Natural, technological, and human-caused hazards pose a threat, significant in frequency, magnitude, or both, to the lives, property, economy, and the environment in the State of Wisconsin. Detailed information about specific threats and mitigation programs are contained in multiple locations.

II.A.1. The Threat and Hazard Identification and Risk Assessment (THIRA), an adjunct to this plan:

a) Identifies and analyzes Wisconsin-specific threats and hazards of significant concern
b) Explores key impacts
c) Assesses capability targets based on the most significant impacts
d) Identifies core capability gaps for further examination and resolution

II.A.2. The Wisconsin Hazard Mitigation Plan (WHMP), an adjunct to this plan:

a) Establishes the state’s mitigation strategy
b) Identifies the goals, recommended actions, and initiatives that will reduce or prevent injury and damage from natural hazards
c) Summarizes the composition and work of the Wisconsin Silver Jackets Hazard Mitigation Team (WSJHMT)

II.A.3. The relevant ESF and incident annexes provide additional hazard analysis and mitigation measures for specific threats and hazards.

II.B. Potential Effects

The WERP recognizes that emergencies may produce cascading effects with an initial incident, either in Wisconsin or in other states, leading to follow-up threats or incidents including:

II.B.1. Damage and destruction of homes, facilities, vehicles, and other property damage
II.B.2. Disruption of power, fuel, communications, water, and other vital services
II.B.3. Contamination of people, food, water, property, or the environment
II.B.4. Damage to critical infrastructure
II.B.5. Disruption of government functions, economic, and financial disruption
II.B.6. Looting and other disruption of law and order
II.B.7. Mass casualties
II.B.8. Displacement of residents with widely varying needs
II.B.9. Need for management and care of household pets, service animals, and livestock
II.B.10. Sizeable influx of survivors from other states

The consequences of disasters to the physical, mental, and financial health of Wisconsin residents can be extensive.

II.C. Responsibility

II.C.1. Effective preparedness requires ongoing public awareness and education programs so that residents will be prepared, when possible, and understand their own responsibilities should a major disaster or emergency event occur.

II.C.2. In Wisconsin’s home rule system, incidents are managed at the lowest possible jurisdictional level.

II.C.3. Department of Military Affairs (DMA)/Wisconsin Emergency Management (WEM) coordinates state agency response in support of local units of government.

II.C.4. State agencies support local response in accordance with local, state, and national authorities and guidance and are expected to provide:

a) Initial and ongoing resources, when warranted and requested, under their own authorities and funding.

b) Alert, notification, pre-positioning, and timely delivery of resources to enable the management of potential and actual state-declared disasters.

c) Proactive support for major, catastrophic, or potentially catastrophic incidents in their initial phases to:

(1) Be agile in reaching out to counties, tribes, and others in advance of requests for support.
(2) Use protocols for expedited delivery of resources.

II.C.5. Government at all levels must continue to function under all threat, emergency, and disaster conditions. Continuity of Government (COG)/Continuity of Operations (COOP) plans are essential adjuncts to this plan.

II.C.6. The Federal Emergency Management Agency (FEMA) coordinates federal response activities in accordance with the National Response Framework (NRF) and federal recovery assistance, contingent on the magnitude of the disaster, as prescribed in the Robert T. Stafford Disaster Assistance and Emergency Relief Act as codified in 42 U.S.C. § 5121, et seq., and as further amended.

II.D. Capability Assessment

Emergency planning at all levels is based on the pre-identification and documentation of needs, resources, resource shortfalls, and contingencies.

II.D.1. Local government response to disaster can quickly exhaust their resources, making outside assistance necessary.

II.D.2. State capabilities are addressed through the Wisconsin THIRA; individual agency plans referenced by this plan’s annexes; in the WebEOC Resource Request and Deployment Module (RRDM); through relevant agreements, compacts, and contracts; and through integration with multi-jurisdictional plans.

II.D.3. If the state is unable to satisfy all emergency resource requests during a major emergency or disaster, it will request assistance from other states through the Emergency Management Assistance Compact (EMAC) and the federal government through a presidential disaster declaration.

III. Policies

III.A. General Authority

This plan is developed, promulgated, and maintained pursuant to state and federal statutes, regulations, and guidance as outlined in Attachment 1, Laws and Regulations.

III.B. Department of Military Affairs/Wisconsin Emergency Management

Chapter 323 of the Wisconsin Statutes establishes an organization of emergency management to prepare the state and its political subdivisions to cope with emergencies resulting from a disaster or the imminent threat of a disaster.

III.B.1. The governor determines the responsibilities of state departments and its independent agencies with respect to emergency management and by order shall direct those departments and agencies in utilizing personnel, facilities, supplies, and equipment before and during a gubernatorial state of emergency.

III.B.2. During a gubernatorial-declared state of emergency and under § 323.12(4), Wis. Stats., the governor shall issue orders, delegate such authority as is necessary to the WEM administrator, and direct the division to coordinate emergency management activities. The governor may also do any of the following:
a) Declare priority of emergency management contracts over other contracts; allocate materials and facilities in his or her own discretion; and take, use, and destroy, in the name of the state, private property for emergency management purposes.

b) Issue such orders as he or she deems necessary for the security of persons and property.

c) Contract on behalf of the state with any person to provide, on a cost basis, equipment and services to be used to respond to a disaster or the imminent threat of a disaster.

d) Suspend the provisions of any administrative rule if the strict compliance with that rule would prevent, hinder, or delay necessary actions to respond to the disaster.

III.B.3. The governor or designee may request federal assistance in the event of an emergency incident. When requesting federal resources, the state identifies the type and quantity of resources needed.

III.B.4. The governor delegates authority to the adjutant general or designee to implement the WERP as needed.

III.B.5. The adjutant general, who heads the DMA, serves as the governor’s homeland security advisor and as the governor’s principal assistant for directing and coordinating emergency management activities.

III.B.6. The adjutant general administers the state’s program of emergency management on a day-to-day basis by:

   a) Developing and adopting a state plan of emergency management to prepare the state and its subdivisions to cope with emergencies resulting from a disaster, or the imminent threat of a disaster, and to minimize, to make repairs to, or restore infrastructure or critical systems that are destroyed or damaged by a disaster.

   b) Prescribing and carrying out statewide training programs and exercises to develop emergency management proficiency, disseminate information, and coordinate emergency management programs.

   c) Furnishing guidance and establishing standards for emergency management programs for local units of government, and prescribing nomenclature for all levels of emergency management.

   d) Providing preparedness information to Wisconsin residents.

   e) Administering the Wisconsin Disaster Fund, which provides grants to local and tribal governmental units on a 70/30 cost-share basis for disaster recovery when federal disaster assistance is not available and when communities meet an established per capita threshold in damages.

III.B.7. In accordance with § 323.10, Wis. Stats.:

   a) “If the governor determines that a public health emergency exists, he or she may issue an executive order declaring a state of emergency related to public health for the state or any portion of the state and may designate the department of health services as the lead state agency to respond to that emergency.”

   b) “If the governor determines that the emergency is related to computer or telecommunication systems, he or she may designate the department of administration as the lead agency to respond to that emergency.”
c) In the absence of an alternative determination, the lead state agency for all state emergencies is the DMA/WEM.

III.B.8. The WERP is guided by Presidential Policy Directive 8 (PPD-8) which:

a) Organizes preparedness activities in five key mission areas:

(1) Prevention – those capabilities necessary to avoid, prevent, or stop a threatened or actual act of terrorism.

(2) Protection – those capabilities necessary to secure the homeland against acts of terrorism and manmade or natural disasters.

(3) Mitigation – those capabilities necessary to reduce loss of life and property by lessening the impact of disasters.

(4) Response – those capabilities necessary to save lives, protect property and the environment, and meet basic human needs after an incident has occurred.

(5) Recovery – those capabilities necessary to assist communities affected by an incident to recover effectively.

b) Defines the core capabilities that are essential for the execution of each of the five mission areas.

III.B.9. The WERP conforms to Homeland Security Presidential Directive 5 (HSPD-5) by incorporating the all-hazards operational and planning provisions of:

a) The National Incident Management System (NIMS).

   (1) WEM uses the Incident Command System (ICS) in disaster response.

   (2) WEM uses Unified Command in situations that affect multiple jurisdictions, multiple agencies within a jurisdiction, or by multiple levels of government.

b) The National Response Framework (NRF) is one of the five documents in the suite of National Planning Frameworks.

   (1) The WERP is structurally patterned after the NRF.

   (2) The WERP defines and prescribes emergency concepts of operations, training, and exercising consistent with the NIMS.

III.B.10. Unless otherwise specified by law, the role of any state agency in an emergency declared under Chapter 323 is to assist local units of government and local first responders in responding to a disaster or the imminent threat of a disaster. § 323.02.(19), Wis. Stats. defines "state agency" as "any office, commission, board, department, or bureau of state government".

III.B.11. Agency employees expected to respond to emergencies or disasters within Wisconsin will have NIMS and ICS training commensurate with their expected roles in response to such emergencies or disasters.

III.B.12. Local jurisdictions respond first to disasters and can quickly exhaust their resources, making outside assistance necessary.

   a) When such assistance is provided, local elected officials continue to retain control over the response. Generally, see Chapters 59, 60, 61, 62, and 66 of the Wisconsin Statutes.
b) Under § 323.11 of the Wisconsin Statutes the governing body of any local unit of government may declare, by ordinance or resolution, an emergency existing within the local unit of government.

c) The emergency power of the governing body of the local unit of government includes the general authority to order, by ordinance or resolution, “whatever is necessary and expedient for the health, safety, protection, and welfare of persons and property within the local unit of government in the emergency.” See § 323.14(4), Wis. Stats.

d) Outside assistance, whether from the county, state, federal government, volunteer, or private sector, is delivered to support the local effort.

III.B.13. This plan may be activated in either of the following manners:

a) By the WEM senior duty officer (SDO) who then notifies the WEM administrator, the adjutant general, and the governor’s office.

b) By the WEM administrator who then notifies the adjutant general, and the governor’s office.

c) At the direction of the adjutant general who then notifies the governor’s office.

d) At the direction of the governor through a declaration of a state of emergency.

III.B.14. The governor may issue an executive order declaring a state of emergency for the state or any portion of the state if he or she determines that an emergency resulting from a disaster or the imminent threat of a disaster exists.

III.B.15. Legal issues arising from the activation or execution of this plan are referred to the DMA general counsel.

III.B.16. Legal issues arising from questions of worker’s compensation, liability of state or local units of government may be subject to Chapter 323 Subchapter IV, Wis. Stats. and are referred to the DMA general counsel.

III.C. Department of Military Affairs/Wisconsin National Guard

Pursuant to § 321.39, Wis. Stats., the governor may order into state active duty members of the DMA/WING.

III.C.1. The WING support begins during the assessment or response phase and ends at an appropriate point during the recovery phase when it is apparent that local government or the private sector can resume control of a capability in a given area of the incident.

III.C.2. The WING typically arrives at an incident completely self-sufficient with enough transportation, food, water, fuel, lodging, and medical support to sustain the force throughout the operation. However, there may be times when this support is requested from other responding agencies.

III.C.3. In the event a requested capability is not available through the WING because it does not normally exist or has been mobilized or exhausted, the WING will ask WEM to request support through the EMAC.

III.C.4. Capabilities provided by the WING are subject to unit mobilizations in support of Title 10 (active duty) missions.

III.D. Priorities for Emergency Management
Incident priorities are the core basis for the decision-making that leads to setting incident objectives and developing incident action plans in each operational period. This plan at all times adheres to the following priorities:

III.D.1. Life safety

III.D.2. Incident stabilization

III.D.3. Property and environmental preservation

III.E. Inclusiveness Policy

III.E.1. Emergency services are provided without regard to economic status, age, racial, religious, political, ethnic, citizenship, or other affiliation.

III.E.2. All emergency services must meet the Americans with Disabilities Act of 1990 – (ADA) 42 U.S. Code Section 12101 etse., and as further amended, and other disability rights laws for physical, programmatic, and communications access (e.g. preparedness, warnings and notifications, evacuations, sheltering, temporary and interim housing).

III.E.3. WEM’s policies and plans conform with the “Whole Community” concept identified in the NRF including children; older adults; individuals with disabilities, and others with access and functional needs; those from religious, racial, and ethnically diverse backgrounds; people with limited English proficiency; and owners of animals, including household pets and service and assistance animals.

III.F. County Government – Common Policies

In accordance with applicable constitutional, statutory, and administrative law, local units of government and counties in Wisconsin operate under “home rule” authority, and retain local control over emergency management activities in their jurisdictions insofar as they also fulfill their emergency management responsibilities and authority defined in Chapter 323 of the Wisconsin Statutes to:

III.F.1. Establish and maintain an emergency management plan and program that is compatible with the state plan of emergency management and Chapter 323 of the Wisconsin Statutes.

a) Assign primary and support emergency responsibilities based on existing resources and capabilities or mutual aid agreements.

b) Organize resources in accordance with either the annex or emergency support function planning framework, ensuring that plans contain sufficient concise content (e.g. crosswalks, charts) to effectively link operations systems to the WERP.

III.F.2. Designate a head of emergency management to:

a) Coordinate and assist in developing local emergency management plans within the county.

b) Integrate local plans with the county plan.

c) Direct countywide emergency management training programs and exercises.

d) Promote and provide opportunities for emergency response personnel to successfully complete all NIMS training and certification commensurate with their levels of responsibility.
III.F.3. Issue local emergency proclamations and request state assistance, when appropriate.

III.G. State Agencies – Common Policies

The policies that follow articulate essential standards for developing and maintaining a sustainable emergency management program with maximum capacity for vertical and horizontal integration in multi-jurisdictional or large-scale emergencies.

III.G.1. General

a) Appoint at least one state agency emergency coordinator with the appropriate level of responsibility and authority to manage the responsibilities that follow.

b) Appoint additional coordinators as necessary.

c) Identify and share new technology and procedures for use in completing emergency management goals and objectives.

III.G.2. Mitigation

a) Participate, as appropriate, on the WSJHMT in the development, implementation, and maintenance of the WHMP.

b) Develop, implement, promote, and enforce policies and programs that reduce the effects of an emergency or disaster.

c) Support intergovernmental coordination in hazard mitigation.

d) Assist with structural and non-structural hazard analysis of state government facilities to identify hazard risks and mitigation strategies for reducing vulnerability.

e) Coordinate the completion of recommendations for which the WSJHMT have lead responsibility and educate agency staff regarding agencies’ mitigation responsibilities.

f) Enhance the public’s hazard awareness.

g) Support local mitigation activities.

h) Review the WHMP semi-annually and provide a progress report to the WEM hazard mitigation officer.

III.G.3. Preparedness

a) Capability assessment

(1) Define, assess, and document required capabilities to execute all emergency management responsibilities.

(2) Catalog all available resources (trained and credentialed personnel, both career and volunteer, equipment, and facilities) using NIMS typing and credentialing standards.

(3) Define and catalog mission-ready packages.

(4) Evaluate interoperability of assets.
b) Planning

(1) Develop and maintain individual agency plans that support the ESFs contained in this plan such as:
   (a) Standard operating procedures
   (b) Notification rosters and systems
   (c) Multi-jurisdictional operations procedures

(2) Develop and maintain the ESFs in this plan for which they have primary responsibility.

(3) Ensure that all plans and procedures provide for populations with access and functional needs, children as well as pets and service animals.

(4) Ensure that copies of all necessary ESF specific plans, procedures, manuals, resource lists, and other reference materials are located in the State Emergency Operations Center (SEOC).

(5) Support, as appropriate, regional, county, municipal, and tribal counterparts in developing response capabilities and plans.

(6) Maintain and disseminate current information on federal and state policies, laws, and regulations relevant to agency responsibility in emergency operations.

(7) Develop and maintain memoranda of understanding (MOU) and mutual aid agreements.

(8) Identify deficiencies in plans and determine appropriate corrective action recommendations.

(9) Identify, develop, and incorporate, as necessary:
   (a) Private sector capabilities and resources
   (b) Backup response and recovery processes

(10) Facilitate the maintenance and expansion of programs such as Wisconsin Voluntary Organizations Active in Disaster (WI VOAD), Wisconsin Emergency Assistance Volunteer Registry (WEAVR), and Medical Reserve Corps (MRC) to prepare volunteers for emergency response and recovery support.

(11) Promote and support coordination and cooperation between governmental, private sector, and non-governmental agencies to facilitate response efforts.

(12) Develop and maintain a Continuity of Operations Plan (COOP) that addresses how the agency will provide essential services to residents, and other state agencies, during response and recovery operations and to return the agency to normal operations.

c) Training
(1) Ensure that all agency emergency response personnel have successfully completed all NIMS training and certification commensurate with their levels of responsibility.

(2) Train all agency emergency response personnel in the organization and use of the WERP with particular emphasis on the ESF 5, agency ESFs, and relevant incident-specific annexes.

d) Exercise

(1) Conduct exercises of individual agency plans.

(2) Vigorously promote engaged participation in exercises by all potential stakeholders.

(3) Participate in exercises of the WERP.

e) Outreach

(1) Communicate with the public to advocate and provide instructions for individual and family emergency preparedness.

III.G.4. Response

a) During non-emergency daily operations, notify WEM of any significant event, incident, emergency, or disaster that:

(1) Presents a potential for loss of life.

(2) Presents a potential for loss or damage to critical infrastructure.

(3) Presents a significant threat to environmental resources.

(4) Presents potential for private and public economic losses.

(5) Impacts the ability of local or state government to provide public services.

b) Provide personnel to staff the SEOC on a 24 hours a day, 7 days a week basis for the duration of center operations as dictated by agency ESF.

c) Assign sufficient personnel and resources to staff the agency's lead and supporting roles in each relevant ESF as well as SEOC general staff positions, as needed.

d) Maintain liaison to local, county, municipal, and tribal counterparts, and volunteer and private partners to provide situational awareness, coordination, support, and additional resources, as needed.

e) Support activation and coordination of mutual aid.

f) Provide personnel and resources for field deployment, as necessary.

g) Issue advisories and protective actions recommendations via ESF 15, External Affairs to the public, as necessary.

h) Assign public information officers to support staffing of the SEOC as outlined in ESF 15, External Affairs.

i) Maintain liaison and coordination with federal agency and ESF counterpart resources and assets.

j) Execute response activities in accordance with NIMS standards as adapted to Wisconsin.
k) Coordinate with county emergency management directors to collect data from uniform disaster situation reports (UDSRs).

l) Coordinate with state and federal staff to conduct preliminary damage assessments (PDAs).

m) Initiate recovery efforts during emergency response operations by supporting the assessment, consultation, documentation, planning and prioritization, and exchange of information to develop appropriate long-term recovery actions.

III.G.5. Recovery

a) Develop policies, programs, and procedures to support the:
   
   (1) Assessment of damages and impacts on critical service delivery.
   
   (2) Return of vital systems to minimum operating standards.
   
   (3) Restoration of critical services to the community.
   
   (4) Provision for the basic needs of the public.

b) Provide staff to continue ESF responsibilities in the SSEC, joint field office (JFO), disaster recovery center (DRC), and other recovery centers for the duration of activated ESF status.

c) Serve as prescribed in ESF 14, Short-Term Community Recovery and Mitigation.

d) Participate, as appropriate, on the Wisconsin Recovery Task Force (WRTF) in the development, implementation, and maintenance of the Wisconsin Recovery Plan.

e) Assign sufficient personnel and resources to staff the relevant Recovery Support Functions (RSFs) as well as state recovery structure positions, as needed.

f) Comply with after-action review evaluation and remediation requirements.

III.G.6. Administration

During response and recovery operations maintain detailed records of actions taken in order to:

a) Create historical records.

b) Recover costs.

c) Address insurance needs.

d) Develop mitigation strategies.

III.H. Tribal Government

The United States government recognizes tribes as domestic, sovereign, independent nations with the right to self-governance, tribal sovereignty, and self-determination. Tribal governments are responsible for the protection and preservation of life, property, and the environment on tribal lands.

III.H.1. Federal and state relationships

a) Under the Robert T. Stafford Disaster Relief and Emergency Assistance Act (Stafford Act), federally-recognized Indian tribes may directly request their own emergency and major declaration, or they may request assistance under a state request.
b) Federally-recognized Indian tribes can request assistance for incidents that impact the tribe, but do not result in a Stafford Act declaration.

III.H.2. Emergency management

a) Tribal governments maintain various levels of emergency preparedness, coordination, communication, and collaboration with federal, state, and local governments.

b) When there is threat of an emergency or actual emergency, tribal authorities must take the appropriate actions to cope with the situation and activate their tribal emergency preparedness procedures and plans.

III.H.3. Disaster assistance

a) The state and its political subdivisions will make every effort to support the tribal nations in their response and recovery efforts.

b) As conditions require and upon request from the tribe, the available and appropriate federal, state, and local government resources will, in accordance with prior arrangements and as authorized by law, be committed to tribal lands to protect lives, property, and the environment.

III.I. Non-Governmental Organizations (NGO)

III.I.1. The American Red Cross is chartered by an act of Congress “to continue and carry on a system of national and international relief in time of peace and apply the same in mitigating the sufferings caused by pestilence, famine, fire, flood, and other great national calamities, and to devise and carry on measures for preventing the same…” (36 U.S.C. § 300101). The State of Wisconsin may not limit or in any way affect the responsibilities of the American Red Cross as authorized by Congress. See § 323.01(3), Wis. Stats.

III.I.2. Many NGOs are organized into the Voluntary Organizations Active in Disaster (VOAD), its Wisconsin affiliate, WI VOAD, and its Milwaukee area counterpart, Citizens and Organizations Active in Disaster (COAD). Such organizations give direct aid and assistance to victims of emergencies and disasters.

III.I.3. NGOs are urged to develop and maintain emergency management programs consistent with the standards and systems prescribed in this plan.

III.I.4. Emergency managers at all levels of government are urged to engage NGOs in planning, training, and exercising across the spectrum of activities governed by this plan.

III.J. Private-Sector Organizations

Private-sector organizations support the WERP either through voluntary actions to help ensure business continuity or by complying with applicable laws and regulations.

To assist in response and recovery from an incident, private-sector organizations:

III.J.1. Take responsibility for their internal preparedness by:

a) Identifying risks and performing vulnerability assessments.

b) Developing business contingency and response plans.

c) Enhancing their overall readiness.
d) Implementing appropriate prevention and protection programs.

e) Coordinating with their suppliers and critical infrastructure and key resource (CIKR) customers to identify and manage potential cascading effects of incident-related disruption through contingency planning.

III.J.2. Accept responsibility to:

a) Share information appropriate within the law with the government.

b) Provide goods and services through contractual arrangements or government purchases, or where appropriate, mutual aid, and assistance agreements with host communities.

c) Act as corporate citizens to donate and facilitate donations by others of goods and services.

d) Where required, bear the cost of planning and response to incidents, regardless of cause. When required, these private-sector organizations are expected to mobilize and employ the resources necessary and available in accordance with their plans to address the consequences of incidents at their own facilities or incidents for which they are otherwise responsible.

III.J.3. Participate with the Business Emergency Operations Center (BEOC) to:

a) Coordinate response and recovery efforts between the SEOC and the private sector during training, disasters, and emergencies.

b) Improve communication and situational information between businesses impacted by a disaster, or tasked with providing supplies or services to the impacted areas, and governments at all levels.

III.K. Plan Administration and Maintenance

The WERP is developed with assistance and input from the designated members of all levels of government, private sector, volunteer, and NGOs that have emergency management responsibilities.

III.K.1. Plan development

a) WEM develops the WERP Basic Plan as well as selected ESFs, attachments, and incident annexes.

b) The designated primary lead agencies and their designated support agencies develop their respective ESF components.

c) WEM provides format and content guidance for all ESFs, attachments, and annexes, as appropriate.

d) All ESF lead agencies provide signed approval of their planning components and each subsequent revision.

e) The governor of the State of Wisconsin accepts the plan and each subsequent revision.

f) Following each gubernatorial term, the incoming governor endorses the plan with a current, signed promulgation order.

g) Attachments to this Basic Plan and its annexes provide a record of changes.
h) Those portions of the WERP that do not contain sensitive or confidential information are available to the public and are posted on the WEM website. The public can obtain hard copies of the plan in accordance with the provisions of Wisconsin’s Open Public Records Law. See §§ 19.31 – 19.39, Wis. Stats.

III.K.2. Exercise

a) In addition to routine activation of the WERP, WEM regularly conducts exercises to test the responsiveness and capabilities of the plan.

b) Exercises are designed to enhance the training of local, tribal, state, and volunteer personnel on their roles and responsibilities in the five mission areas of emergency management.

c) A number of these exercises test federal response plans and integration.

III.K.3. After-action review

a) WEM conducts internal and inter-agency after-action reviews (AARs) of all phases of each operation and exercise to review:

   (1) Actions taken.
   (2) Resources expended.
   (3) Economic and human impacts.
   (4) Equipment shortcomings.
   (5) Operational readiness.
   (6) Lessons learned.

b) WEM, in consultation with the involved emergency organizations, recommends revisions and upgrades to the appropriate plans, programs, exercise plans, and resources along with proposed timelines for resolution of operational shortcomings.

c) The WEM administrator submits an after-action report to the adjutant general, who, on behalf of the governor, ensures completion of the remediation plan.

III.K.4. Plan revision

a) Biennial review

   (1) WEM coordinates release of a new version of the plan every two years to include all updates and changes since the previous version.
   (2) WEM management endorses the new version and routes it first to department secretaries for signatures and then to the adjutant general for approval.
   (3) The governor accepts the new version.

b) Substantive interim updates involving policy or of significant magnitude

   (1) WEM coordinates with staff from the lead agency and supporting agencies of the relevant plan component to form a working group.
   (2) The working group submits its revision recommendations to WEM management for endorsement and then to the department secretary for the lead agency to sign and implement the changes.
(3) The revised and date-tracked plan component replaces its predecessor in the current WERP, with changes noted on the revisions page at the end of the document.

(4) WEM management presents revised versions to the adjutant general.

c) Procedural changes that modify plan operation without changing policy

(1) WEM coordinates with staff from the lead agency of the relevant plan component to update and incorporate the needed procedural changes. A work group may be convened, if necessary.

(2) Planners submit their recommendations to WEM management for endorsement and then to the department secretary for the lead agency to sign and implement the changes.

(3) The revised and date-tracked plan component replaces its predecessor in the current WERP, with changes noted on the revisions page at the end of the document.

d) Non-substantive changes (e.g. names, contact information)

(1) WEM in coordination with lead agency staff of the relevant plan component completes revisions, as needed.

(2) The revised and date-tracked plan component replaces its predecessor in the current WERP, with changes noted on the revisions page at the end of the document.

IV. Concept of Operations

This plan brings together all aspects of emergency planning necessary to prepare for, respond to, recover from, and mitigate emergencies throughout the state. The plan provides the information necessary to allow emergency managers at all levels to be better prepared for future operations, and have quicker response times during emergencies. Additionally the WERP acts as a guiding document during actual incidents and events by providing the overall roles and responsibilities of all agencies involved.
IV.A. Emergency Response Flowchart

Figure 1: Emergency Response Flowchart
IV.B. Roles and Responsibilities

IV.B.1. County and tribal government

a) Response

(1) Manage the incident using their own resources and drawing additional resources from other local, county, tribal, and non-governmental agencies.

(2) Coordinate controlled access to the disaster area.

(3) Coordinate the evacuation and shelter of affected populations consistent with the “Whole Community” concept identified in the NRF including children; older adults; individuals with disabilities and others with access and functional needs; those from religious, racial, and ethnically diverse backgrounds; people with limited
**State of Wisconsin**

**Emergency Response Plan**

English proficiency; and owners of animals, including household pets and service and assistance animals.

(4) At the onset of an emergency or disaster assess the need for outside assistance:

(a) Incident commanders share situation updates among responding organizations and jurisdictions.

(b) Local jurisdictions provide situation reports to the county emergency operations center (EOC) in accordance with established plans and procedures.

(c) Counties provide situation reports and damage assessments to WEM.

(5) Determine the need to declare a local state of emergency.

(6) Coordinate through the county to obtain state assistance.

(7) Coordinate through the county with WEM if state and federal resources may be required.

(8) Maintain accurate activity logs, financial records, and situation reports of disaster-related activities.

(9) Begin the damage assessment process using the UDSR.

b) Recovery

(1) Determine recovery priorities and implementation strategies such as:

(a) Restoring essential services.

(b) Assigning personnel, obtaining additional assistance, and managing donated resources.

(c) Coordinating access to the disaster area.

(d) Coordinating restoration activities (e.g. re-entry).

(e) Identifying short-term and long-term health and behavioral health impacts and determining how to address them.

(f) Addressing the long-term economic impacts of disaster.

(2) Continue with the damage assessment process.

(3) Identify potential mitigation projects.

(4) Make appropriate applications for federal disaster assistance and ensure programs are administered according to guidelines.

(5) Demobilize and resume normal operations.

IV.B.2. State government

a) WEM

(1) Operate and maintain the Wisconsin Duty Officer System, a staffed 24 hours a day, 7 days a week, 365 days a year, alerting, notification, and monitoring system to link counties and local jurisdictions to immediate emergency support and resources.

(2) Elevate the SEOC and all relevant ESFs.
(3) Deploy the mobile command center (MCC) and other WEM-owned assets.

(4) Recommend, as appropriate, that the governor declare a state of emergency and issue other orders.

(6) Initiate requests for interstate and federal assistance, as necessary.

(7) Activate the WSJHMT

b) All primary and support agencies

(1) Fulfill agency responsibilities as set forth in the Wisconsin Duty Officer System.

(2) Initiate internal notification systems and individual agency plans.

(3) Initiate all relevant ESFs.

(4) Staff the SEOC following procedures set forth in ESF 5.

(5) Initiate recovery efforts concurrently with response activities, coordinating closely among local, county, tribal, state, federal, and volunteer agencies that have roles in response and recovery operations.

(6) Conduct internal and inter-agency after-action reviews of all phases of the disaster and execute remediation measures for any deficiencies identified.

IV.C. Response Organization

The following summarizes selected standard components of Wisconsin’s emergency response organization. The system is described in greater breadth and depth in relevant ESFs, ESF attachments, standard operating procedures (SOPs), and incident annexes to this plan.

IV.C.1. Local organization

a) Incident command post (ICP)

The field location at which the primary tactical-level, on-scene incident command functions are performed.

b) Local/county/tribal EOC

The physical location which coordinates local information and resources to support the incident commander.
Figure 3: Local Response Organization

Local Response Organization

Incident Coordination & Resource Support

- Local/County/Tribal Emergency Operations Center
- WI Regional Resources

Incident Command

- Area Command (multi-event)
- Incident Command Post (ICP)
- Incident Command Post (ICP)
- Incident Command Post (ICP)

When a jurisdiction exhausts its own resources and those available through regional mutual aid and support systems, WEM escalates state support.
IV.C.2. Regional organization

a) WEM regions

(1) WEM’s regional directors are dispatched to the disaster scene, as appropriate, to coordinate state assistance in support of local, county, and tribal operations.

(2) Multi-Agency Coordination (MAC)

WEM can activate a MAC element to provide on-scene coordination of respective state agency support to local disaster response and recovery efforts.
b) Mutual Aid Box Alarm System - Wisconsin (MABAS WI)

(1) A voluntary mutual aid measure established in accordance with § 323,13(1)(d), Wis. Stats. and Wisconsin Administrative Code Chapter WEM 8 for deploying fire, rescue, and emergency medical services personnel in a multi-jurisdictional and multi-agency response. For more information, please refer to ESF 4.

(2) Supported by the WEM Fire Services Coordinator.

Figure 5: MABAS WI Division Map

<table>

<tbody>
<tr>
<td>Purple</td>
<td>Counties with active MABAS WI divisions – the numeral indicates the division number</td>
</tr>
<tr>
<td>Gray</td>
<td>Counties not actively pursuing MABAS WI participation</td>
</tr>
</tbody>
</table>
c) Emergency Police Services (EPS)

(1) A mutual aid system for proper coordination of state and local law enforcement activities. For more information, please refer to ESF 13.

(2) Supported by the WEM EPS coordinator.

Figure 6: EPS Area Map
d) Wisconsin Hazardous Materials Response System

Figure 7: Wisconsin Hazmat Response System

Wisconsin Hazardous Materials Response System

IV.C.3. State organization

a) Wisconsin Duty Officer System

(1) The WEM duty officer (DO) and SDO continuously monitor events around the state when contacted by the National Weather Service (NWS), Wisconsin Department of Transportation (WisDOT), or county emergency management offices.
b) Incident management teams (IMTs)

(1) An incident management team is a comprehensive resource (a team) to either augment ongoing operations through provision of infrastructure support, or when requested, transition to an incident management function to include all components and functions of a command and general staff. An IMT:

(a) Includes command and general staff members as well as support personnel.

(b) Has formal response requirements and responsibilities.

(c) Has pre-designated roles and responsibilities for members (identified and able to be contacted for deployment).

(d) Is available 24 hours a day, 7 days a week, 365 days a year.

(2) Teams in Wisconsin

(a) Department of Natural Resources (DNR) IMT.

(b) Brown County IMT.

(c) Southeast Wisconsin IMT.

(d) Southwest Wisconsin IMT.

c) Multi-Agency Coordination (MAC) element

Provide a process for on-scene coordination of support to local disaster response and recovery efforts (See ESF 5, Attachment 2).

d) Agency operations center(s)

When an emergency incident necessitates state agency support, such agencies may activate their department operations centers.

e) SEOC

(1) The physical location at which state coordination of information and resources to support local incident management occurs. The primary SEOC location is at the DMA, Joint Forces Headquarters, Room A111, 2400 Wright Street, Madison, Wisconsin. For more information, please refer to ESF 5.

(2) Mobilization to an alternate SEOC is described in the DMA/WEM Continuity of Operations Plan (COOP). There are two alternative SEOC locations.

(a) Armed Forces Reserve Center (AFRC), 6001 Manufacturers Drive, Madison, WI

(b) REACT Center/Volk Field Air National Guard Base, near Camp Douglas, WI

f) ESFs

The WERP emulates the NRF which groups agency response and recovery activities by unique functional responsibilities among 15 ESFs that:

(1) Are each headed by a primary state agency with one or more state agencies and non-governmental organizations designated to support the function based on their resources and capabilities.

(2) Are used in conjunction with one or more additional ESFs to facilitate the state’s response to a particular incident.
(3) May include one or more sub-functional groups.
(4) Have counterpart federal ESFs, with which they must coordinate for acquisition of assistance under the NRF.

IV.C.4. Emergency Management Assistance Compact (EMAC)

a) EMAC is a congressionally-ratified mechanism that provides form and structure to interstate mutual aid.

b) Through EMAC, a disaster-impacted state can request and receive assistance from other member states quickly and efficiently, resolving two key issues upfront: liability and reimbursement.

c) The State of Wisconsin has formally adopted EMAC under § 323.80, Wis. Stats.

d) For additional information regarding EMAC, please see ESF 7.

IV.C.5. Federal organization

a) Regional response coordination center (RRCC)

(1) Coordinates the deployment and management of U.S. regional-level emergency response teams and resources to support disasters, special events, field operations, incidents of regional significance, and other events.

b) Joint Field Office (JFO)

In the event of a presidential disaster declaration, a temporary local facility for coordination of local, tribal, state, and federal incident response and recovery support.

c) Federal ESFs

The following table illustrates the federal agency ESF counterparts to the Wisconsin ESFs.

### IV.D. Readiness Levels

DMA/WEM operates a Duty Officer (DO) System to provide a single point of contact for coordinated state support to respond to incidents when notified. First responders, local units of
government, and state agencies inform DMA/WEM through the DO System when an incident occurs. Based on the magnitude of the incident, DMA/WEM assumes, as appropriate, one of five readiness levels to coordinate state agency response. For more information, please refer to ESF 5.

IV.D.1. The five readiness levels represent a graduated increase in capacity ranging from the lowest (Level 5) to the highest (Level 1). Readiness level assumptions are described in Table 5.

IV.D.2. Wisconsin’s readiness levels correspond to FEMA Region V RRCC Activation Levels.

### Table 5: Readiness Levels

<table>
<thead>
<tr>
<th>Readiness Levels</th>
<th>Assumptions</th>
</tr>
</thead>
</table>
| **Level 1** (Full-Scale SEOC Operation) | - Full-scale SEOC operation with 24-hour staffing  
- Implementation of ESF 5 and all administrative systems  
- Activation of all other appropriate state ESFs  
- Governor’s Executive Order declaring a State of Emergency  
- Request for a federal (Stafford Act) declaration and appropriate federal response and recovery support |
| **Level 2** (Partial SEOC Operation) | - Partial SEOC operation including staffing of the Logistics Section to manage anticipated or actual resource requests.  
- Implementation of ESF 5 and all appropriate administrative systems (e.g. multi-agency coordination)  
- Activation of all other appropriate state ESFs  
- Governor’s Executive Order declaring a State of Emergency  
- Potential request for a federal (Stafford Act) declaration and appropriate federal response and recovery support |
| **Level 3** (Minimal SEOC Operation) | - Minimal SEOC operation (e.g. support for smaller scale incidents, active monitoring of severe weather conditions)  
- Implementation of ESF 5 and all appropriate administrative systems  
- Potential request for a Governor’s Executive Order declaring a State of Emergency |
| **Level 4** (Enhanced Monitoring Operation) | - DO and SDO maintain an enhanced level of monitoring of local incidents or any imminent threats that may require state support  
- At the discretion of the SDO, DMA/WEM and appropriate state agencies may participate from remote locations using the Web EOC incident management system  
- Staff maintains communication with affected jurisdiction(s) and coordinate resource requests |
| **Level 5** (Steady State Operation) | - Steady state operation of DMA/WEM and the DO System  
- DO and SDO:  
  - Maintain situational awareness of local incidents or any imminent threats that may require state support  
  - Process routine requests for state assets  
  - Provide notifications in accordance with standard operating guidelines and standard operating procedures  
  - Initiate elevation of the SEOC to level 4 or higher |

| **Federal ESF Coordinating Agencies** | U.S. Department of Transportation (US DOT)  

### I. Introduction

#### I.A. Purpose

To ensure the safety and efficiency of the transportation system and related economic activity during response and recovery by coordinating the use of transportation resources (human, technical, equipment, facility materials, and supplies) to support the needs of local government, voluntary organizations, and other agencies requiring emergency transportation assistance.

#### I.B. Scope

ESF 1 embodies considerable intermodal expertise as well as public and private sector transportation stakeholder relationships. WisDOT, with the assistance of the ESF 1 support agencies, provides transportation assistance in domestic incident management, including the following activities:

**I.B.1. Monitor and report**

Monitor and report status of and damage to the transportation system and infrastructure as a result of an incident or event. Monitor, provide leadership, and guidance to county, tribal, and local government entities regarding their roadways, upon their request and considering home rule or sovereignty implications.

**I.B.2. Traffic control planning**

Identify temporary alternative transportation solutions that can be implemented by others when systems or infrastructure are damaged, unavailable, or overwhelmed.

**I.B.3. Transportation systems/resources planning**

Coordinate and support prevention, preparedness, response, recovery, and mitigation activities among transportation stakeholders within the authorities and resource limitations of ESF 1 agencies.

**I.B.4. Infrastructure repair**

Coordinate the restoration and recovery of the transportation systems and infrastructure.

**I.B.5. Evacuation planning**
Provide transportation route identification and emergency traffic control plans.

I.B.6. Modal element support under the direct authority of WisDOT related to aviation, maritime/harbors, local roads/structures, transit, and railroads.

   a) Pipeline transportation safety, although under the umbrella of the US DOT, is not supported by WisDOT.

   b) Pipeline transportation safety is supported by the Public Service Commission (PSC) under ESF 12.

ESF 1 is not responsible for movement of goods, equipment, animals, or people.

I.C. Policies

   I.C.1. WisDOT/DTSD and WisDOT/WSP and all supporting state agencies named in this ESF have the responsibility and authority to plan for and respond to disasters under Chapter 323, Wis. Stats.

   I.C.2. The State of Wisconsin will support a local, county or tribal jurisdiction with evacuation and transportation needs by drawing, as able, from local, state, and federal government, volunteers, and the private sector.

   I.C.3. Local, county, and tribal governments are responsible for evacuation and transportation and have the primary responsibility for incident prevention, preparedness, response, and recovery, including county-wide planning for these activities.

   I.C.4. When activated to respond to an incident, the primary agencies for ESF 1 develop work priorities in cooperation with the local, county, and tribal government.

   I.C.5. Local authorities are responsible for obtaining required permits, waivers, and clearances related to ESF 1 support.

   I.C.6. The private sector is responsible for a large proportion of the state and national infrastructures, and local and state authorities will encourage their participation in ESF 1 incident action planning and other planning activities.

II. Concept of Operations

II.A. General

   II.A.1. Upon alert notification of a state emergency operations center (SEOC) elevation to:

       a) Level 4 through the statewide bureau’s duty officer, a WSP representative or DTSD representative(s), or both, will participate from remote locations, closely monitoring and contributing to the incident site. Staff maintains communications with affected jurisdictions and coordinates resources remotely.

       b) Level 3 or higher to DTSD at the Traffic Management Center (TMC) and to the WSP respectively through the statewide bureau’s duty officer, a WSP representative or DTSD representative(s), or both, will report to the SEOC within one hour of notification based on the elevation level to provide key transportation-related information, planning, and emergency response capabilities to the incident commander.

   II.A.2. Based on the incident objectives and incident action plan (IAP), the scope of response activities ESF 1 will conduct during emergency operations include:
a) Reporting on the status of the interstate and state highway system, county and local roadways, when applicable, and specifically when roadways are operating below applicable standards.

b) Coordinating with county, tribal and local government entities about transportation system availability and conditions in terms of evacuations, oversize/overweight, damage assessment, and availability.

c) If routes are not operating to applicable standards, identification of alternate temporary routes and modes for transportation blockages on the state highway system.

d) Adapting traveler warning and information services to accommodate system conditions, incident objectives, and IAP direction.

e) Providing longer-term coordination of the restoration and recovery of the affected transportation systems and infrastructure, including strategies that address freight and logistics resilience.

f) Providing engineering services related to design and construction services in the aid of recovery efforts.

II.B. Organization

WisDOT emergency organization will require that select WisDOT staff serve in emergency response roles in addition to their normal duties. Emergency Transportation Operations (ETO) response staff are further characterized as follows (detailed descriptions provided in WisDOT ETO Plan):

II.B.1. First responders

Personnel that arrive on the emergency scene, evaluate, and make a determination of whether a response has the potential to escalate.

a) WSP troopers
b) DTSD Regional Incident Management Coordinator(s) (RIMC)
c) DTSD specialized technical inspectors

II.B.2. Contact personnel

Staff that serve as the points of contact for positions that support emergency operations having the authority to commit resources.

a) WSP duty sergeants
b) Traffic Management Center (TMC) staff
c) DTSD Regional Duty Officer (RDO)
d) DTSD Statewide Bureau Duty Officers (SWBDO)

II.B.3. Liaisons

Personnel trained to coordinate directly with other emergency response agencies/divisions. ETO liaisons include:

a) DTSD Wisconsin Highway Emergency Liaison Personnel (WisHELP)
b) DTSD regional maintenance engineers and coordinators
II.B.4. Communications personnel
Personnel that provide notifications and information to the public and media.
   a) STOC operators
   b) WSP communication center dispatchers
   c) Public Information Officer(s) (PIO)
   d) DTSD Regional Communications Manager(s) (RMC)

II.C. Mobilization Triggers
II.C.1. Following an alert notification of an SEOC elevation to Level 4 or above to the DTSD at the TMC and to the WSP, respectively:
   a) DTSD activates appropriate regional and statewide bureau office staff.
   b) WSP activates designated personnel to respond to the SEOC.
   c) DTSD will manage ETO incident response escalations as they relate directly to ESF 1 based on the recommendations of the incident commander and field personnel.

II.C.2. DTSD statewide bureau duty officers serve as primary points of contact between Incident Command (IC), SEOC, WisHELP, and the TMC.

II.C.3. The WSP Director of the Bureau of Field Operations, or his/her designee, serves as the primary point of contact for WSP response operations at all levels.

II.C.4. Notification of the SEOC elevation to Level 4 or higher comes from WEM directly to ETO staffing personnel, the WSP, and the TMC. When the SEOC is elevated, WisDOT will activate staff on the following schedule:
   a) Level 4
      WisDOT and WSP will participate from remote locations closely monitoring and contributing to the incident site.
   b) Level 3
      (1) WisDOT will send a member of the DTSD to staff the WisDOT station at the SEOC when deemed appropriate.
      (2) WSP will send a member to the WSP station at the SEOC.
   c) Level 2
      (1) WisDOT will send a member of the DTSD to staff the WisDOT station at the SEOC.
      (2) WSP will send a member to the WSP station at the SEOC.
   d) Level 1
      (1) WisDOT will send a member of the DTSD and a PIO (as needed).
      (2) WSP will send a member to the WSP station in the SEOC.

II.D. WisDOT Response Structure
II.D.1. WisDOT will coordinate with the SEOC and local government to the regional level.
II.D.2. Each WisDOT region and WSP post is prepared to coordinate with the county emergency operations centers and send liaisons to:

a) Provide on-site support, as needed. WisDOT is prepared to provide on-site support at an incident site, local jurisdiction, and/or EOC.

b) Monitor and report status of and damage to transportation systems and infrastructure as a result of an incident or emergency.

c) Provide situational awareness to the local jurisdictions and to the SEOC.

d) Report status of state highway system facilities.

e) Identify alternate transportation solutions implemented by WisDOT or other agencies when systems or infrastructure are damaged, unavailable, or overwhelmed.

f) Coordinate alternate transportation with local jurisdictions and mass transit providers.

g) Provide support to local jurisdictions for planning and implementing alternate routing on the local road network.

h) Provide support to the local jurisdictions and the FEMA evacuation liaison team.

i) Assist in the coordination of large-scale highway evacuations, especially if involving more than one state.

j) Coordinate the restoration and recovery of the state highway infrastructure.

k) Prioritize restoration efforts based on the impacts to regional, statewide, and national interdependencies based on the functional classification of the roadway(s) with the top priority being given to the interstate system.

l) Coordinate and support prevention, protection, mitigation, response, and recovery activities among transportation stakeholders.

m) Support the local jurisdictions and federal planning efforts as they relate to transportation, including evacuation planning.

n) Work within the NIMS process to assist in ensuring that access and functional needs populations are included in the planning process.

III. Agency Responsibilities

The WERP Basic Plan defines standardized tasks that constitute prevention, protection, mitigation, response, and recovery responsibilities of any agency that serves a role in emergency management. The following defines those responsibilities that are unique to ESF 1, and is intended to be used in conjunction with the common tasks outlined in the Basic Plan.
### III.A. Lead Agency – Wisconsin Department of Transportation

#### Table 2: Lead Coordinating Agency Functions

<table>
<thead>
<tr>
<th>Agency</th>
<th>Functions</th>
</tr>
</thead>
</table>
| Department of Transportation | Division of Transportation System Development  
- Coordinate transportation emergency management activities in support of the WERP.  
- Conduct damage assessments on the state highway system.  
- Assist in promptly identifying impediments on evacuation routes on the state highway system and contacting responsible parties to remove the impediment.  
- Provide highway routing information necessary to redirect traffic from affected areas, provide road signs, and coordinate provision of barricades.  
- Coordinate the mobilization of personnel and equipment required for engineering services as related to the state highway system.  
- Coordinate the development of emergency contracts to pay private vendors for repairs to the state highway system, including roadways and bridges.  
- Direct the removal of debris on roadways, railroads, airstrips, etc., critical for emergency vehicle passage. |
| Department of Transportation | Wisconsin State Patrol  
- Assist local law enforcement and local authorities with highway traffic operations, access control, security, and emergency response.  
- Work with DTSD and local law enforcement in traffic directions and evacuation efforts.  
- Provide state with communications network using microwave phone lines.  
- Assist with contraflow operations, if necessary.  
- Help coordinate recovery activities.  
- Direct the removal of debris on roadways, railroads, airstrips, etc., critical for emergency vehicle passage. |

| Wisconsin National Guard |  
- Coordinate WING personnel and equipment to assist civilian government agencies when requested, if available, and when appropriate with debris removal, road repairs, construction of temporary roadways, traffic operations, access control, security, and emergency response. Assistance may include, but is not limited to, the following Mission Ready Packages (MRPs):  
  - Community/Highway Assistance  
  - Engineering Mobility Support  
  - Joint Reception, Staging, Onward Integration (JRSOI)  
  - Manpower Support  
  - Traffic Control Strike Team  
  - Transportation Support |
| All other Wisconsin governmental support agencies | Agency as a whole  
- Provide transportation system support to state operations, as requested. |

I. Introduction

I.A. Purpose

I.A.1. Adequate, reliable communications and information technology equipment, facilities, and capacity for first responders and emergency management officials at all levels are core necessities for developing incident situational awareness and providing a common operating picture. ESF 2:

a) Coordinates strategic and tactical communications and information technology assets and statewide infrastructure.

b) Supports the rapid and accurate dissemination of information relating to impending or occurring natural or technological incidents to federal, state, tribal, and local officials, and the general public.

I.B. Scope

I.B.1. ESF 2 is an integral element of the WERP and applies to all state agencies and state-owned communications and warning resources and information technology systems during an emergency declared by the governor (§323.10, Wis. Stats).

I.B.2. ESF 2 may also support certain non-emergency events as determined by the governor, the adjutant general, or the WEM administrator.

I.C. Policies

I.C.1. Except for the following incident types, WEM is the lead ESF 2 agency and the WEM communications and warning officer is the ESF 2 coordinator:

---

a) Public health emergencies declared by the governor: WI DHS may be designated the lead agency for public health emergencies as in accordance with §323.10, Wis. Stats.

b) Cyber emergencies declared by the governor: DET may be designated the lead agency for cyber related emergencies in accordance with §323.10, Wis. Stats.

I.C.2. Except for cyber-related emergencies, DET supports ESF 2 by providing robust and reliable information technology infrastructure for state and local agencies on a day-to-day basis and during pending or occurring emergencies.

I.C.3. On request, the WEM Communications and Warning officer may make communications and warning assets assigned to WEM available to state, local, and non-government agencies during pending or occurring emergency incidents and certain non-emergency events.

   a) When WEM cannot directly support requests for communications resources, the WEM Communications and Warning officer coordinates with other state agencies for assets under their control.

   b) Where WEM, or another state agency, cannot support a resource request, the WEM Communications and Warning officer may request resources through ESF 7.

I.C.4. Through ESF 2, WEM provides emergency alerting capability for key state and local jurisdiction officials in the event of an emergency or pending emergency.

I.C.5. In conjunction with ESF 15, WEM can provide emergency alerting capability for the public for impending or occurring emergencies.

I.C.6. ESF 2 supports state agency continuity of operations plans (COOP) addressing telecommunications and information technology requirements at alternate locations.

I.C.7. The WERP Cyber Incident Annex outlines procedures, policies, organization, actions, and responsibilities for a coordinated, multidisciplinary, broad-based approach to prepare for cyber-related incidents.

II. Concept of Operations

II.A. General

II.A.1. The WEM Communications and Warning unit is responsible for providing trained communicators and reliable communications and, in conjunction with the DMA Information Technology Section, information technology infrastructure and capabilities at primary and alternate SEOCs as well as other locations due to exigent circumstances.

II.A.2. As necessary, the WEM Communications and Warning unit may request communications assistance through state-to-state mutual aid compacts, Emergency Management Assistance Compact (EMAC) requests, and from FEMA through federal ESF 2.

II.A.3. The SEOC provides emergency communications between local jurisdictions and state agencies as well as the federal government.

   a) Communications line of succession

      (1) Voice communications
(a) Telephone
   (i) Commercial landline telephone
   (ii) Commercial wireless telephone
   (iii) Commercial satellite telephone

(b) Two-way radio (see attachment 1 for specific radio frequencies)
   (i) Wisconsin Interoperable System for Communications (WISCOM) statewide trunked radio system
   (ii) WEM two way radio repeater system
   (iii) FEMA Federal Emergency Management Agency National Radio Systems (FNARS)
   (iv) WI ARES/RACES
   (v) State and national standard interoperable channels

(2) Data communications
   (a) WebEOC®
   (b) Email
   (c) Facsimile
   (d) WI Trac (for hospital to hospital information)
   (e) WI ARES/RACES

II.B. Organization

II.B.1. The WEM Communications and Warning unit, organized under the Response Section of the Bureau of Response and Recovery, is staffed by a Communication Officer and an Assistant Communications Officer.

II.B.2. When the SEOC is operating at Level 3 or above, the WEM Communications and Warning unit supports ESF 2 in the ICS logistics section.

II.C. WEM Communications Capabilities and Assets

II.C.1. WEM maintains a warning center on a 24 hour/365 day basis.
   a) A landline telephone system is the primary notification system to communicate with Federal Agencies.
   b) WEM provides a 24-hour hotline (800-943-0003) as a primary means for the public, local, county, and tribal officials to contact the WEM duty officer (DO). Callers to the 24-hour hotline will hear a voice recording with the following options:
      (1) Press 1 for Hazardous Substance Spills or to report a DNR emergency.
         (a) Between 7:00 AM and 10:00 PM this routes calls to the DNR Hotline. DNR Hotline staff will notify the appropriate spill coordinators, DNR Duty Officer, and DNR staff as necessary. The DNR Duty Officer will notify the WEM Duty Officer as necessary.
         (b) Between 10:00 PM and 7:00 AM and during weekends this routes calls to
District 1 State Patrol. District 1 State Patrol staff will notify the DNR Duty Officer as necessary.

(2) Press 2 to report an emergency to the WEM Duty Officer

(a) Between 7:00 AM and 10:00 PM this routes calls to the DNR Hotline. DNR Hotline staff will handle the calls according to the WEM Duty Officer Manual and will notify the WEM Duty Officer and Senior Duty Officer as necessary.

(b) Between 10:00 PM and 7:00 AM this routes call to the Wisconsin National Guard Joint Operations Center (JOC). JOC staff will handle the calls according to the WEM Duty Officer Manual and will notify the WEM Duty Officer and Senior Duty Officer as necessary.

(3) Press 3 for MABAS third alarm fire activations and to contact Badger Red Dispatch Call Center.

c) The WEM Radiological Emergency Preparedness Section provides an as needed, just-in-time call center known as the Wisconsin Disaster Information Assistance Line (WI-DIAL) at 855-582-3993. The State Emergency Operations Center (SEOC) manager can activate WI-DIAL for radiological as well as all hazards drills, exercises, emergency incidents, and planned events, as needed.

d) WEM provides, uses, and maintains facsimile machines at several locations at WEM headquarters in Madison and at the six regional offices.

e) WEM provides most employees with a wireless telephone for voice, text, and email messages.

f) WEM provides, uses, and maintains a limited number of satellite telephones capable of using the wireless telephone networks as a backup for key WEM facilities including the SEOC, the six regional offices, and for all key WEM staff members.

g) WEM has the capability to initiate or participate in video teleconferences (VTC) using equipment disbursed from the WEM communications and warning office.

h) A secure telephone (STE) is available in the WEM administrator’s office at WEM headquarters. Note: A limited number of key staff have the required DoD or DHS security clearances to operate the STE equipment during regular office hours. Backup and off-hours STE operations may be accomplished with an STE located in the Joint Operations Center.

II.C.2. To enhance situational awareness, WEM conducts teleconferences between the SEOC and WEM headquarters with counties, tribes, municipalities, and other emergency management partners.

II.C.3. Information technology assets

a) WebEOC provides a secure, compartmentalized, internet-based application for emergency management communication, collaboration, situational awareness, and information management.

b) RAVE is the primary method for sending alerts and notification messages via email, telephone, or text to WEM staff and other state, tribal, municipal, and county agencies. RAVE alerts are sent to all public and private emergency management partners as needed during an incident.

c) Email and Network Connectivity
II.C.4. Two-way radios

a) WEM maintains communications assets on both conventional analog, and Association of Public-Safety Communications Officials (APCO) Project 25 (P25) digital Phase I conventional channels including a system of seven conventional analog VHF two-way radio repeaters throughout the state. These repeaters are augmented by two mobile dual-mode analog/P25 repeaters on WEM’s mobile 80-foot light tower.

(1) All WEM radios can communicate on common national and state interoperable channels as well as key fire and law enforcement channels.

(2) All WEM vehicles and regional offices have radios programmed for the WEM repeater system and interoperable channels.

(3) WEM maintains:

(a) A cache of P25 capable VHF portable radios at WEM headquarters in Madison.

(b) A cache of 700/800MHz portable radios, UHF portable radios, a portable VHF repeater, and a portable UHF repeater at WEM headquarters in Madison.

(c) A limited cache of P25 WISCOM dual-band portable radios at each WEM regional director’s office.

II.C.5. Other assets maintained by WEM

a) A NIMS Type 2, state-of-the-art, self-sustaining, all weather, interoperable mobile communications center (MCC) trailer containing:

(1) Limited conference facilities

(2) Dispatch stations

(3) A suite of radios capable of operating on all interoperable communications channels used in Wisconsin.

(4) In addition, the MCC has:

(a) Two onboard VHF analog radio repeaters for key interoperable radio repeaters

(b) Banks of VHF-Lo, VHF-Hi, UHF, 700/800MHz, Marine Citizen’s Band, Aviation, and high frequency radios to communicate with various conventional and trunked radio systems

(c) Other equipment allowing it to function as an on-scene emergency operations and dispatching center.

(5) The MCC can create:

(a) A local area wireless, internet connected computer network

(b) A local area wireless telephone network

(c) Ad hoc radio networks by interconnecting otherwise incompatible radio systems

b) A mobile 80-foot, self-erecting, telecommunication and lighting tower available for rapid deployment and short or long-term use. The light tower contains:

(1) A high-powered lighting system capable of illuminating a wide area
Two multi-mode analog and P25 digital two-way radio repeaters capable of operating on and patching communications between the WEM two-way radio network and various inter-agency statewide radio channels

c) A NIMS Type 4, 22-foot, all-weather, self-sustaining trailer containing:

   (1) Equipment capable of operating on and interconnecting disparate radio communications networks

   (2) A dispatch and communications area

   (3) A small meeting area

   (4) Limited cooking facilities

II.D. Other State Agency Communications Capabilities and Assets

II.D.1. Human assets

a) Communications unit Leaders (COMLs)

   (1) An Incident Command System (ICS) position under the Logistics Section responsible for developing plans for the effective use of communications resources during an incident or event.

   (2) COMLs are available through several state agency incident management teams (IMTs) including DNR and WSP, as well as regional IMTs.

   (3) Both of the WEM Communications Officers are credentialed COMLs.

II.D.2. Landline and wireless telephone assets

a) Backup voice-over-IP (VOIP) telephone system

   (1) Operating on the DOT/WSP network and maintained by WSP.

   (2) Phones are located in all WSP district headquarters, WEM regional offices, and key locations in the SEOC and WEM.

b) Wisconsin Interoperable System for Communications (WISCOM)

   (1) A shared, P25 trunked radio system available to first responders and emergency management partners.

   (2) The WISCOM system is managed by a statewide group made up of public safety executives representing federal, state, county, tribal, and local emergency management partners.

c) VHF two-way radio network

   (1) Operated by WSP primarily for communications between each district headquarters and their cars in the field and with other county, tribal, and federal law enforcement agencies.

   (2) WSP shares this system with multiple state agencies, including the DNR for communications with their wardens and rangers. Users have access to this system via State Patrol posts statewide.

II.D.3. Network Communications: The Department of Administration (DOA), Division of Enterprise Technology (DET) provides a wide array of Network & telecommunication support for State and local government entities including:
a) Application Services:

(1) Email exchange: Enterprise e-mail provides state agencies with a centrally managed, enterprise-wide messaging system. In addition to e-mail and calendar functions, the enterprise e-mail system provides anti-spam and anti-virus protection, file-sharing services, outbound faxing, and the ability to send encrypted e-mail. This service offers a variety of mailbox sizes designed to meet the diverse business needs of state agencies and their employees.

(a) Components of this system include:

(i) Operating system
(ii) Storage hardware
(iii) Server hardware
(iv) E-mail software and support

(b) Agency technical support staff provides support for the client-based e-mail component.

(2) Enterprise instant messaging and collaboration: Enterprise Instant Messaging and Collaboration (IMC) is a Unified Communications service based on Microsoft Lync. The Enterprise IMC service connects people everywhere, on Windows and other operating systems including mobile devices, as part of their everyday productivity experience. Enterprise IMC provides a consistent, single client experience for Presence, Instant Messaging, User-to-User Voice and Video as well as a great meeting experience.

b) Infrastructure services:

(1) BadgerNet: BadgerNet is Wisconsin’s state-wide network serving all 72 counties by providing wide area network, Internet transport, and video applications to state government and educational entities. BadgerNet also provides network services to authorized users and other governmental entities such as municipalities, Tribal nations, and technical colleges in the state. BadgerNet is a flexible high-capacity network for the transportation of electronic information across the State in an efficient and cost effective manner.

(2) Server management: Agency Managed Application Services (AMAS) is a DET managed dedicated server environment that includes hardware and standard software for agencies. The standard software includes the server operating system, server management tools and utilities included in the DET Technical Reference Model. DET retains full control and responsibility for the acquisition, licensing, installation, configuration, administration, maintenance, and management of the server platform and operating system software. The customer agency retains full control and responsibility for the acquisition, licensing, installation, configuration, administration, maintenance and support of the applications and web services which are installed on the DET AMAS servers.

(3) Storage management: Data Storage Service provides centralized storage management for data storage, data backup, and data recovery. This service includes mainframe and distributed data storage.

(4) Backup services: The DET Managed Backup and Restore service is designed to provide subscribers with recovery capabilities for servers and data hosted at DET’s data centers and remote locations.
c) Security services: The DET Enterprise Security Service helps protect valuable information, sensitive data, and the state computer infrastructure from unauthorized access, compromise, and corruption, while allowing the information and systems to remain accessible and productive for their intended users. See the Cyber-incident Response Annex for further details about DET’s role in cybersecurity.

d) Telecommunication services:

(1) Local Voice (Centrex, Long Distance) Service: Local Voice Service provides Centrex telephone service for State of Wisconsin agencies, universities, campuses and authorized users. These services are provided under contract as negotiated by DOA with ATT, CenturyTel, Verizon, Solarus, and Frontier Telephone.

(2) Mobile Device Management: The Mobile Device Management Service provides state agencies with mobile device security protection, device management, email management, application management and Bring your own Device (BYOD) support.

(3) Enterprise Skype for Business (Unified Communications): Skype for Business (Skype4B) is a Unified Communications (UC) service that connects people everywhere - on Windows as well as other operating systems and platforms, including most mobile devices, as part of their everyday productivity experience. It provides a consistent, single-client experience for Presence, Instant Messaging, User-to-User Voice and Video, as well as a great meeting experience. Skype for Business also delivers seamless and secure integration with other Microsoft collaboration products such as Outlook, SharePoint and Office applications.

e) Platform Services:

(1) Distributed database management: Database hosting provides state agencies and other government entities with a database environment that can be used for development, testing, or production.

(2) Office 365: Office 365 is a subscription-based cloud service from Microsoft that provides productivity software and related services for its users.

(3) SharePoint management: SharePoint 2013 service provides a web-based business productivity platform that allows for collaborative content to be centrally created and managed, with appropriate contextual metadata, customized to fit the business needs of the users.

(4) File and print services: The File Hosting Service with enhanced recovery provides secure hosting of file share data without the need for servers. The service includes replication for disaster recovery purposes.

(5) Mainframe services: Dedicated Mainframe Services (DMS) is a DET-managed service that is integral to DET’s current application hosting. This service is based on one implementation; which is localized to the DET data centers. DMS provides individual agencies with the option to deploy their applications on the dedicated mainframe hardware in a shared environment across multiple agencies. This mainframe host is tailored to the accept high volume processing specific needs, allowing for customized scheduling for off peak hours management, detailed monitoring, and redundancy for full recovery in the event of a disaster either large or small.

f) Staff with technical expertise in all functions listed above.
g) Deployable Communications: During an emergency the DOA can deploy the following equipment in support of response personnel:

(1) Cellular phones – 100 (U.S. Cellular)
(2) iPads – 7
(3) Smart phones – 10 (Verizon)

II.D.4. Mobile routers: Wisconsin National Guard (WING) maintains a secure videoconference (SVTC) system located at Joint Forces Headquarters and at the state capitol building in Madison.

II.D.5. WI DOJ maintains the Transaction of Information for Management of Enforcement (TIME) System consisting of a central computer facility with terminals located at WEM and approximately 2,850 law enforcement agencies throughout Wisconsin. Operating over dedicated telephone lines, the TIME system is used primarily to transmit law enforcement information. However, WEM may use the system to transmit and receive hard copy emergency and sensitive message traffic.

II.D.6. Two way radio (see Attachment 4 for a map of key state owned two way radio tower sites):

a) WI DHS manages two medical-based communications systems:

(1) An EMS communications system using VHF and UHF conventional radio channels for ambulance and hospital communications. The system provides:

(a) Rapid access to emergency medical services (EMS) providers.
(b) EMS dispatch and response coordination.
(c) Medical control communications.
(d) EMS related interagency communications.

(2) The Wisconsin Tracking, Resources, Alerts and Communications (WI Trac) system, an internet-based tool for hospitals and their emergency response partners. WI Trac provides:

(a) Near real time hospital bed availability.
(b) Emergency alerting.
(c) Other hospital related emergency communications.

b) The Wisconsin Interoperable System for Communications (WISCOM) is a VHF, P25 digital two way radio system for use statewide by government and select non-government public safety agencies at all levels. WISCOM operates from a backbone of 80 core radio tower sites. Additional ‘local enhancement sites’ provided by WISCOM users can be added to the system. WISCOM is managed by the Statewide System Management Group (SSMG) made up of public safety executives from federal, tribal, state, county, and local agency partner users. See Attachment 5 for a map of WISCOM radio tower sites.

c) WSP maintains the Wisconsin Mutual Aid Radio Channel (MARC) for use statewide by all public safety agencies at all levels. The MARC network comprises base stations and radio repeaters throughout Wisconsin. MARC channels may be used any time interagency communications are required. See attachment 2 for detailed information on the MARC system.
To enhance state access to local governments, WEM and WSP can communicate with county sheriffs’ offices via radio from the closest WSP district headquarters using most standard statewide and national interoperable radio channels including the MARC channels.

II.E. County and Local Government Two Way Radio Systems

II.E.1. County and municipal governments provide two-way radio systems to support their public safety and business needs. Provisions are in place at the local level to leverage these systems to support emergency management during an emergency.

II.F. Federal Agency Communications Capabilities

II.F.1. FEMA operates the Federal Emergency Management Agency National Radio Systems (FNARS), a high frequency (HF) radio network providing long distance non-secure voice communications capability and long distance common telephone service. A FNARS radio is located in the WEM communications room adjacent to the SEOC.

II.F.2. Mobile Emergency Response Support (MERS) and Mobile Air Transportable Telecommunications System (MATTs) resources support local, state, and federal responders with transportable communications support elements. Both MERS and MATTs provide mobile telecommunications, operational support, life support, and power generation assets for the on-site management of disaster and all-hazards activities.

II.F.3. FEMA operates The National Warning System (NAWAS) landline telephone system used for disseminating national level threat warnings to state and local jurisdictions throughout Wisconsin. FEMA permits and encourages states to use NAWAS for disseminating state level warnings to local jurisdictions. Both national and regional/state NAWAS terminals are located in the WEM communications room and main office, with multiple state NAWAS terminals in other key WEM office areas. NAWAS is WEM’s designated backup communication system to communicate with Federal emergency response organizations.

II.F.4. The National Oceanic and Atmospheric Administration (NOAA) all hazards weather radio system is a network of over 1,000 nationwide transmitters broadcasting continuous weather information directly from the nearest National Weather Service (NWS) office. This network continually broadcasts official weather warnings, watches, forecasts, and other hazard information. See attachment 3 for information on NOAA weather radio facilities in Wisconsin.

II.F.5. The Emergency Alert System (EAS), part of the Integrated Public Alerting System (IPAWS), is a national public warning system providing the president the ability to address the American public during periods of national emergency. EAS operates through broadcast radio and television stations, cable and satellite television and radio systems, and direct broadcast satellite (DBS) providers.

a) State and local authorities are able to use EAS to deliver important emergency information, such as America’s Missing: Broadcast Emergency Response (AMBER) alerts and weather information targeted to specific areas.

b) IPAWS also allows geo-specific alerting via the Cellular Mobile Alerting System (CMAS).

c) WEM has access to the statewide EAS and IPAWS networks and can make emergency broadcasts directly from WEM headquarters. WEM regularly transmits required
monthly tests to broadcasters statewide via this system.

II.G. Private and Leased Services

II.G.1. Each SEOC workstation has a telephone connected to the commercial telephone network using AT&T Unified Communications (UC) Voice-over-IP (VoIP) telecommunications network. This network is cloud-based, (i.e., uses no on-premise servers), and traverses WEM’s computer network. Two backup systems are provided in case of network outages:

a) Department of Transportation (DOT) VoIP phones on the DOT network serving WEM Regional Director offices and other key locations

b) POTS (Plain Old Telephone System) phones in key locations throughout WEM and on the UC VoIP network, allowing VoIP phones to continue communications.

II.G.2. The EMnet phone system is a dedicated VoIP communication network which utilizes the internet as primary and satellite as an automatic backup for the Point Beach Nuclear Power Plant. Phones are located at WI State Patrol in De Forest, WEM SEOC Communications (Room A106), and WEM Radiological Emergency Preparedness Section (Room 222). Two additional access ports are located in the WEM SEOC Operations Section, and in the Planning & Preparedness Section (Room 212).

a) Priorities for the EMnet phone system are:
   1. Incident notification and changes to protective action recommendation
   2. Status updates
   3. General information and coordination

II.G.3. ERONS NXT Communicator is a computer-based system using commercial POTS telephone lines providing the Prairie Island Nuclear Generating Plant direct communications with the State of Minnesota and affected Minnesota counties, the Wisconsin SEOC, and Pierce County, WI. ERONS NXT Communicator telephones are located in the SEOC, SEOC Communications room, and various offices at WEM headquarters.

II.G.4. Local and county governments: Local and county governments often contract with private internet and communications service providers.

II.H. Non-Governmental Agencies Capabilities and Assets

II.H.1. Amateur radio

a) Amateur radio offers a robust distributed communications system operating in various portions of the radio spectrum using a variety of operating modes for worldwide and last-mile communications capabilities. The value of amateur radio to the emergency management community is well-documented as a critical asset in incidents where other radio services are overloaded, degraded, or inoperative.

b) WI ARES/RACES is a NIMS-compliant organization of volunteer amateur radio communicators located throughout the state who donate their time, skills, and equipment to provide a reliable backup communications system available to all public, private, and volunteer emergency management partners.

c) WEM maintains the WEM RACES Radio Room capable of using multiple amateur radio bands and modes. When activated by the WEM Communications and Warning Officer, WI ARES/RACES provides credentialed volunteer communicators to operate
the equipment.

d) More than 60 Wisconsin counties have ARES/RACES organizations grouped together into districts with boundaries identical to WEM Regions.

e) WI ARES/RACES teams mobilize through their county emergency managers for local incidents and by the WEM communications and warning officer for statewide incidents.

II.H.2. American Red Cross

a) The American Red Cross maintains a sophisticated radio communications network for its offices, mobile units, and personnel operating in the field. The American Red Cross supports victims of emergencies by passing health and welfare messages on their behalf. The American Red Cross makes their communications assets available to other emergency management partners as time and resources allow.

II.H.3. The Salvation Army (SA)

a) SA maintains some communications capabilities for its offices and units operating in the field. SA also sponsors the Salvation Army Team Emergency Radio Network (SATERN), a corps of amateur radio operators who volunteer their time, skills, and equipment to provide communications for SA and for victims of emergencies and disasters.

II.H.4. Wisconsin Telecommunicator Emergency Response Taskforce (WI-TERT)

a) WI-TERT is an organized network of trained public safety dispatchers available for deployment to assist a dispatch center or to staff a mobile communications center in the event an incident overwhelms or otherwise compromises a state or local public safety communications staff.

b) When requested, WI-TERT, through its memorandum of understanding (MOU) with WEM, deploys teams of communicators to support public safety agencies statewide. Agencies request assistance from WI-TERT through the WEM duty officer.

II.I. ESF Activities

The WERP Basic Plan defines standardized tasks that constitute prevention, protection, mitigation, response, and recovery responsibilities of any agency that serves a role in emergency management. The following charts define those responsibilities that are unique to ESF 2, to be used in conjunction with the common tasks outlined in the WERP Basic Plan.

<table>

III. Agency Responsibilities

III.A. General

The WERP Basic Plan defines standardized tasks that constitute the prevention, protection, mitigation, response, and recovery responsibilities of any agency that serves a role in emergency management. The following charts define those responsibilities that are unique to ESF 2, to be used in conjunction with the common tasks outlined in the WERP Basic Plan.

III.B. Lead Coordinating Agencies

<table>
<thead>
<tr>
<th>Agency</th>
<th>Functions</th>
</tr>
</thead>
<tbody>
<tr>
<td>Department of Administration</td>
<td>• Assume a lead role in managing the planning for, response to, and recovery from a cyber-related incident.</td>
</tr>
<tr>
<td></td>
<td>• Plan, deploy, and maintain an information technology system for state agencies for day-to-day as well as emergency operations.</td>
</tr>
<tr>
<td></td>
<td>• Plan and coordinate programs for state agencies to provide assistance in information technology to local jurisdictions.</td>
</tr>
<tr>
<td></td>
<td>• In conjunction with WEM, support private utility operators in the restoration of</td>
</tr>
</tbody>
</table>
voice, video, and data transmission capabilities.

- In conjunction with WEM, coordinate acquisition and deployment of additional telecommunications equipment and personnel necessary to establish temporary communications capabilities within an affected area.

**Wisconsin Department of Health Services**

- Assume a lead role in managing the planning for, response to, and recovery from a human health related incident.
- Provide guidance to Wisconsin hospitals, ground ambulances, and EMS providers regarding appropriate radio frequencies and networks.

**Department of Military Affairs**

**Wisconsin Emergency Management**

- Plan and coordinate emergency telecommunications and warning. On request, provide assistance to local jurisdictions.
- Coordinate and maintain statewide communications and warning capability for public safety and emergency management agencies.
- Coordinate and maintain statewide communications and warning capability for the general public.
- During normal duty hours, operate and maintain the primary state warning point.
- Operate and maintain the secondary state warning point at WEM headquarters in the SEOC.
- Operate and maintain the primary NAWAS warning point for Wisconsin.
- In conjunction with DET, support private utility operators in the restoration of voice, video, and data transmission capabilities.
- In conjunction with DET, coordinate acquisition and deployment of additional telecommunications equipment and personnel necessary to establish temporary communications capabilities within an affected area.
- Supplement state emergency communications systems with a mobile communications center and other WEM-operated equipment.
- Issue EAS and IPAWS messages as requested by the governor or the governor’s authorized representative.
- Operate the state alternate warning point.

### III.C. Wisconsin Government Support Agencies

I. Introduction

I.A. Purpose
To coordinate emergency public works and engineering support to local, county, and tribal governments by drawing from the public sector, private sector, and volunteers.

I.B. Scope
   I.B.2. Assess the damage to critical structures and infrastructure.
   I.B.3. Restore and maintain essential services along with emergency repair of damaged public infrastructure and critical facilities.
   I.B.4. Provide technical assistance to include engineering expertise, construction management, and contracting real estate services.
   I.B.5. Provide for the necessary equipment, supplies, and procuring of private sector resources to support response and recovery.
   I.B.6. Implement and manage FEMA’s Public Assistance (PA) Program and other recovery programs.

I.C. Policies
   I.C.1. Tribal and local units of government are responsible for ensuring that infrastructure and buildings in their respective communities are safe for use after a disaster and during recovery.
   I.C.2. Tribal and local units of governments are responsible for mutual aid and assistance agreements to facilitate the sharing of resources to support response and recovery. Copies of these agreements should be provided to WEM.
   I.C.3. Tribal and local authorities are responsible for obtaining required permits, waivers, and clearances related to ESF 3 support.
I.C.4. State, tribal, and local authorities will encourage the participation of private sector infrastructure owners and operators in ESF 3 incident action planning and other planning activities.

I.C.5. The private sector is a partner or lead for the rapid restoration of infrastructure or related services.

I.C.6. The state is responsible for coordinating assistance from federal agencies when an incident or disaster requires such a response.

II. Concept of Operations

II.A. General

II.A.1. Activation of ESF 3 resources occurs through the Duty Officer (DO) system unless the State Emergency Operations Center (SEOC) is at Level 3 or above.

II.A.2. ESF 3 is managed through WEM and at the local level. State coordination activities are conducted by the WEM regional director and Multi-Agency Coordination (MAC) element.

II.A.3. There may be mutual aid agreements in place between public works agencies based upon the Public Works Mutual Assistance Agreement authorized under §323.13(1)(d), Wis. Stats.; the Wisconsin Public Works Assistance Agreement Operations Plan, or other local agreements.

II.B. Response Capabilities

II.B.1. Technical advice and evaluations

II.B.2. Engineering services

II.B.3. Construction management and inspection

II.B.4. Emergency contracting

II.B.5. Provision of potable water

II.B.6. Provision of emergency power

II.B.7. Needs and damage assessment immediately following the incident

II.B.8. Debris clearance from public streets and roads and oversight of collection sites for the various items removed.

II.B.9. Temporary repair or replacement of emergency access routes.

II.B.10. Emergency demolition or stabilization of damaged structures and facilities (structures designated by state and local jurisdictions as immediate hazards to the public health and safety, or as necessary, to facilitate the accomplishment of life saving operations).

II.B.11. Emergency contracting to support public health and safety.

II.B.12. Support and coordinate the assistance that may be provided by government-sponsored volunteer groups and resources in support of the functions of this ESF.
II.B.13. Technical assistance including structural inspection of private residences, commercial buildings, and structures.

II.B.14. Assist in the preparation of internal preliminary damage assessments (PDAs).

II.B.15. Agencies should maintain contacts of predetermined qualified contractors that can provide recovery and restoration services.

II.C. ESF Activities

The WERP Basic Plan defines standardized tasks that constitute the prevention, protection, mitigation, response, and recovery responsibilities of any agency that serves a role in emergency management. This section defines those activities that are unique to ESF 3, and is intended to be used in conjunction with the common tasks outlined in the WERP Basic Plan.

Table 2: Prevention, Protection, and Mitigation Activities

</tbody>
</table>
### Phase | Action Item | Agency
--- | --- | ---
**Response Activities** | • Support the temporary repair or replacement of emergency access routes. Routes include damaged streets, roads, bridges, ports, waterways, airfields, and any other facilities necessary for passage of rescue personnel, including alternate routes of access. | DNR  DMA/WEM  DMA/WING  WisDOT  
• Support the emergency restoration of critical infrastructure and key resources (CIKR) including utilities (water, wastewater, electricity, fuel, telecommunication) and transportation systems. | DMA/WEM  
• Activate the notification systems to assemble a state engineering team and attach to the MAC or preliminary damage assessment (PDA) team as needed. | DMA/WEM  
• Activate the notification systems to support the requests and directives resulting from a governor-declared state of emergency, request for a federal emergency or disaster declaration. | DMA/WEM  
• Evaluate the probability and time period of the recovery phase for the incident and report such to the SEOC. | Local  PSC  WisDOT  
• Maintain fiscal estimates of the amount of damage to utilities (water, wastewater, electricity, fuel, and telecommunication), transportation systems, and other CIKR, along with the work and costs incurred by the functions of this ESF. | Local  All Support Agencies

### Table 4: Recovery Activities

<table>
<thead>
<tr>
<th>Phase</th>
<th>Action Item</th>
<th>Agency</th>
</tr>
</thead>
</table>
| **Recovery Activities** | • Support and prioritize technical advice, evaluations, engineering services, construction management, and inspection. Provide emergency contracting for the repair of utilities (water, wastewater, electricity, fuel, and telecommunication). | DNR  PSC  DMA/WEM  WisDOT  
• Participate in needs and damage assessment immediately following the incident. | Local  DNR  PSC  DMA/WEM  WisDOT  
• In coordination with ESF 13, continue debris removal from public streets and roads. Identify locations for temporary storage of the various types of debris in the impacted areas. | Local  DNR  DMA/WING  WisDOT  
• Coordinate and provide notification to the public for the process of debris management including sorting, pick-up times, and drop-off sites, along with making routine updates. | Local  DMA/WEM  
• Coordinate emergency demolition or stabilization of damaged structures and facilities (i.e. those designated by state and local jurisdictions as immediate hazards to the public health and safety), and coordinate the clean-up and disposal of debris from the disaster site. | Local  DOA  DMA/WEM  WisDOT  
• Coordinate emergency private contracting companies to support public health and safety activities. | DOA  DMA/WEM  WisDOT |
III. Agency Responsibilities

The WERP Basic Plan defines standardized tasks that constitute the prevention, protection, mitigation, response, and recovery responsibilities of any agency that serves a role in emergency management. The following defines those responsibilities that are unique to ESF 3, and is intended to be used in conjunction with the common tasks outlined in the Basic Plan.

III.A. Common Responsibilities

During non-emergency operational periods, ESF 3 primary and support agency personnel maintain a notification system capable of assembling a state engineering team to be attached as needed to the WEST and preliminary damage assessment team.
### III.B. Lead Coordinating Agency – Department of Military Affairs

**Table 5: Lead Coordinating Agency Functions**

<table>
<thead>
<tr>
<th>Agency</th>
<th>Functions</th>
</tr>
</thead>
</table>
| Department of Military Affairs: Wisconsin Emergency Management | • Coordinate assistance from federal, state, and private organizations.  
• Coordinate assistance for local governments in assessing damage to infrastructure and buildings, and determine what resources are required to restore and maintain essential services.  
• Coordinate with state agencies responsible for public works and engineering to provide local governments the necessary resources to restore and maintain essential services.  
• Provide training, as requested, to local entities regarding conducting damage assessment and identification of appropriate mitigation measures.  
• Begin to collect and process damage assessment reports of the disaster or emergency as soon as practical with available resources. Then process and distribute these reports to other pertinent county, state, and federal agencies.  
• Identify, prioritize, and coordinate energy and utility problems that result from the disaster (e.g. shut off gas and electricity to flooded areas, restore critical systems, control underground water and gas main breaks). |

### III.C. Wisconsin Governmental Support Agencies

**Table 6: State Government Support Agencies Functions**

<table>
<thead>
<tr>
<th>Agency</th>
<th>Functions</th>
</tr>
</thead>
</table>
| Department of Administration | • Provide state fleet vehicles or state aircraft for the transportation of people, the limited transportation of supplies, or for damage assessment.  
• Provide architects and engineers who can assist with damage assessment and make recommendations in the areas of structural and roof evaluation, design and construction supervision, evaluation of electrical and utility facilities, and power plant operation.  
• Assist with locating various energy suppliers in the case of a power shortage.  
• Provide energy (i.e. heating) assistance and emergency weatherization services for low income households during periods of cold weather.  
• Complete the damage assessment of state-owned facilities in the disaster area.  
• Access the state and federal surplus property contacts to determine the availability of assistance.  
• Provide coastal management grants that protect, restore, or enhance coastal resources.  
• Coordinate with users to restore BadgerNet (i.e. voice, data, and video networks for public agencies around Wisconsin) in the event of an outage. |
| Department of Corrections | • Provide inmate labor forces to assist in a disaster based upon WI DOC policies or procedures. |
| Department of Justice | • Provide legal assistance in matters related to possible fraud and deceptive practices by companies or individuals against those affected by the incident.  
• Assist in the investigation and possible prosecution in reported incidents of fraud, deceptive practices, or other criminal activity related to the incident. |
<table>
<thead>
<tr>
<th>Agency</th>
<th>Functions</th>
</tr>
</thead>
</table>
| Department of Natural Resources | • Provide technical assistance in the areas of water and air quality, sewage treatment, dam safety, hazardous and solid waste, river flood control, shoreline protection, and environmental assessments.  
                                   • Inspect dams, order draw-downs and repairs, and recommend operational changes.  
                                   • Assist with providing the necessary environmental waivers and legal clearances to response efforts.  
                                   • Support efforts for temporary construction of roads and bridges, when appropriate.  
                                   • Support efforts to protect the water supply and sewage systems.  
                                   • Support efforts with debris, trash, and waste removal, including assisting with temporary landfill issues.  
                                   • Support efforts to designate and demolish structures that are determined to be hazardous.  
                                   • Assist with determining the need for and construction of emergency structures (e.g. levees, sandbagging, bridges).  
                                   • Support efforts to provide sanitation services during an emergency.  
                                   • Coordinate with WEM and local governments to utilize private contractors in response, recovery, mitigation, and remediation efforts.  
                                   • Identify critical locations (e.g. water and wastewater facilities) that need to be cleared of debris immediately to provide effective emergency services. |
| Department of Safety & Professional Services | • Assist local officials with assessing damage to private onsite waste treatment systems (POWTS) and facilitate the restoration of those damaged systems.  
                                              • Assist local officials with assessing damage to buildings and structures that constitute an imminent danger and warrant demolition.  
                                              • As requested, provide local officials with:  
                                                o Information on businesses credentialed and regulated by the state to perform building inspection and repair services.  
                                                o Prioritize and expedite credentialing of out-of-state individuals performing work associated with the repair, construction, and inspection of damaged buildings and structures.  
                                              • Provide consultation services:  
                                                o To local officials who are required to determine if a state plan review must take place prior to working on damaged buildings and structures, and POWTS.  
                                                o To design professionals involved in the repair or reconstruction of damaged buildings and structures.  
                                                o On a prioritized plan, review service to those design professionals requiring a plan review and approval in order to proceed with the repair or replacement of damaged buildings and structures, and POWTS.  
                                              • Assist local partners in assessing and resolving potential health issues related to the debris removal process. |
### Agency Functions

**Department of Transportation: Agency as a whole**
- Provide technical expertise to county and local officials to prevent further damage or to assist with emergency repairs of state, county, and local highways and bridges, along with prioritizing the necessary repairs.
- Coordinate road closures and establish alternate routes of access.
- Provide staff to assess and compile damage assessments for highways, parks, and other public works facilities that will assist WEM and FEMA with the development of preliminary damage reports.
- Provide staff or lists of private appraisers for the preliminary assessment of damages to railroads and other transportation routes.
- Provide lists of private contractors and consultants who could assist local governments with the design, repair, and construction of transportation infrastructure.

**Public Service Commission: Agency as a whole**
- Provide assistance to coordinate and prioritize the repair or restoration of utilities, including seeing that safety inspections are conducted before the general public is allowed to return to the impacted area.
- Provide regulatory oversight and enforcement of public utility companies regarding their emergency preparedness and response.
- Monitor emergency service activities of electric, telecommunication, water, and natural gas public utilities.
- Act as liaison between public utilities and state and federal governmental agencies and officials.
- Assist with damage assessment of public utility facilities and prioritize the need for disaster recovery funding.
- Make recommendations to legislative bodies about applicable changes in planning, zoning, and safety codes to mitigate the impact of future disasters.

**Department of Military Affairs: Wisconsin National Guard**
- Provide requested resources to support state and local emergency response efforts for the protection of life and property.
- Track usage of WING resources in accordance to WING Concept Plan (CONPLAN 11-01).
- Coordinate with the SEOC and local incident commander(s) for withdrawal of WING resources.

Public Works Mutual Assistance Agreement
Intentionally left blank
This Agreement made and entered into the date set forth next to the signature of the respective parties, by and between the units of local government subscribed hereto (hereafter "Unit(s)" that have approved this Agreement as provided in Section 11 and adopted same in manner as provided by law and are hereafter listed at the end of this Agreement or on file pursuant to Section 11.

WHEREAS, the parties hereto have determined because of geographical and regional considerations it is important for Wisconsin public works to coordinate mutual aid through the Public Works Mutual Assistance Agreement for the effective and efficient provision of Mutual aid between the Units; and

WHEREAS, it is recognized and acknowledged that emergencies, natural disasters, and man-made catastrophes do not conform to designated territorial limits and state boundaries; and

WHEREAS, the Wisconsin Statute 66.0301(2) authorizes any municipality to contract with other municipalities for the receipt or furnishing of services, such as public works services.

WHEREAS, section 323.13(1)(d) of the Wisconsin Statutes relates to standards for local emergency management programs, and

WHEREAS, pursuant thereto the Adjutant General of the Department of Military Affairs of the State of Wisconsin is authorized to furnish guidance, develop and promulgate standards for emergency management programs; and

WHEREAS, pursuant to section 323.13(1)(d) of the Wisconsin Statutes, the standard for agencies that manage public works programs “shall include the suggestion that the local unit of government, or a federally recognized American Indian tribe or band in this state, adopt the mutual assistance agreement created by the division for the intergovernmental collaboration of public works personnel, equipment, and resources in a multi-jurisdictional or multi-agency response”; and

WHEREAS, Public Works is recognized as a first responder pursuant to Homeland Security Personnel Directive (HSPD8); and

WHEREAS, the American Public Works Association (APWA) recognizes and encourages the formation of statewide mutual assistance agreements which provide for public works support across the full spectrum of public works functions; and

WHEREAS, Emergency Management Assistance Compacts (EMAC), ratified by Congress and the State of Wisconsin, has been established to coordinate interstate response and is coordinated through Wisconsin Emergency Management (WEM); and
WHEREAS, the National Response Framework (NRF) presents the guiding principles that enable all public works response partners to prepare for and provide for a unified national response to disasters and emergencies and the NRF provides public works with a systematic proactive approach to prevent, protect against, respond to, recover from, and mitigate the effects of incidents in order to reduce the loss of life and property, and harm to the environment; and

WHEREAS, the parties hereto have determined that it is in their best interests to enter into this Agreement to secure to each the benefits of mutual aid in public works for the protection of life and property from an emergency or disaster; and,

WHEREAS, the parties hereto have determined that it is in their best interests to associate to provide for communications procedures, training and other necessary functions to further the provision of said protection of life and property from an emergency or disaster;

NOW, THEREFORE, in consideration of the foregoing recitals, the Unit’s membership in the Public Works Mutual Assistance Agreement and the covenants contained herein,

THE PARTIES HERETO AGREE AS FOLLOWS:

SECTION ONE

Purpose

It is recognized and acknowledged that in certain situations, such as, but not limited to, emergencies, natural disasters and man-made catastrophes, the use of an individual Member Unit’s personnel and equipment to perform functions outside the territorial limits of the Member Unit is desirable and necessary to preserve and protect the health, safety, and welfare of the public. It is further expressly acknowledged that in certain situations, such as the aforementioned, the use of other Member Unit’s personnel and equipment to perform functions within the territorial limits of a Member Unit is desirable and necessary to preserve and protect the health, safety, and welfare of the public. Further, it is acknowledged that coordination of mutual aid through the Public Works Mutual Assistance Agreement is desirable for the effective and efficient provision of mutual aid.

SECTION TWO

Definitions

For the purpose of this Agreement, the following terms as used in this agreement shall be defined as follows:

A. “Aiding Unit”: A Member Unit furnishing equipment, personnel, and/or services to a Stricken Unit.
B. “Authorized Representative”: A party’s employee who has been authorized, in writing by that party, to request, to offer, or to otherwise provide aid and assistance under the terms of this Agreement. The list of Authorized Representatives for each party shall be attached to the executed copy of this Agreement. In the event of a change of personnel, unless otherwise notified, the presumption will be that the successor to the employee’s position will be the authorized representative.

C. “Emergency”: An occurrence or condition in a Stricken Unit’s territorial jurisdiction which results in a situation of such magnitude and/or consequence that it cannot be adequately handled by the Stricken Unit, so that it determines the necessity and advisability of requesting aid.

D. “Executive Board”: The statewide oversight board of PWMAS which is comprised of Region representatives.

E. “Incident command system”: This system has the meaning specified in s. 323.02(9), Stats., and follows the guidelines of the National Incident Management System, also known as NIMS.

F. “Member Unit”: A unit of local government including but not limited to a county, city, village, town, tribe or band, or an intergovernmental agency and the units of which the intergovernmental agency is comprised which is a party to the Public Works Mutual Assistance Agreement and has been appropriately authorized by the governing body to enter into such agreement, and to comply with the rules and regulations of PWMAS.

G. “Public Works”: The physical structures and facilities developed or acquired by a local unit of government or a federally recognized American Indian tribe or band in this state to provide services and functions for the benefit and use of the public, including water, sewerage, waste disposal, utilities, and transportation.

H. “Public Works Mutual Assistance System” (hereinafter referred to as PWMAS): A definite and prearranged plan whereby emergency response and assistance is provided to a Stricken Unit by the Aiding Unit(s) in accordance with the system established and maintained by the Member Units and amended from time to time.

I. “PWMAS or ‘Public Works Mutual Assistance System’ region” means the WEM regional areas as identified by the Adjutant General under ss. 323.13(2)(a), Stats.

J. “Stricken Unit”: A Member Unit or a non-participating local governmental unit which requests aid in the event of an emergency.
SECTION THREE
Authority and Action to Effect Mutual Aid

The Member Units hereby authorize and direct their respective Authorized Representative or his/her designee to take necessary and proper action to render and/or request mutual aid from the other Member Units in accordance with the policies and procedures established and maintained by the PWMAS. The aid rendered shall be to the extent of available personnel and equipment not required for adequate protection of the territorial limits of the Aiding Unit. The judgment of the Authorized Representative, or his designee, of the Aiding Unit shall be final as to the personnel and equipment available to render aid.

A. Whenever an emergency occurs and conditions are such that the Authorized Representative, or his designee, of the Stricken Unit determines it advisable to request aid pursuant to this Agreement he shall notify the Aiding Unit of the nature and location of the emergency and the type and amount of equipment and personnel and/or services requested from the Aiding Unit.

B. The Authorized Representative, or his designee, of the Aiding Unit shall take the following action immediately upon being requested for aid:

1. Determine what equipment, personnel and/or services are requested according to the system maintained by PWMAS.

2. Determine if the requested equipment, personnel, and/or services can be committed in response to the request from the Stricken Unit;

3. Dispatch immediately the requested equipment, personnel and/or services, to the extent available, to the location of the emergency reported by the Stricken Unit in accordance with the procedures of PWMAS;

4. Notify the Stricken Unit if any or all of the requested equipment, personnel and/or services cannot be provided.

SECTION FOUR
Jurisdiction Over Personnel and Equipment

Personnel dispatched to aid a party pursuant to this Agreement shall remain employees of the Aiding Unit. Personnel of the Aiding Unit shall report for direction and assignment at the scene of the emergency to the Planning Section Chief, or designee, of the Stricken Unit. The Aiding Unit shall at all times have the right to withdraw any and all aid upon the order of its Authorized Representative or designee; provided, however, that the Aiding Unit withdrawing such aid shall notify the Incident
Commander or designee of the Stricken Unit of the withdrawal of such aid and the extent of such withdrawal.

SECTION FIVE

Compensation for Aid

Equipment, personnel, and/or services provided pursuant to this Agreement may be waived at the discretion of the Aiding Unit. It is the policy of the parties to this Agreement to seek compensation from a Stricken Unit only when the costs associated with the mutual assistance causes a financial burden upon the Aiding Unit. However, any expenses recoverable from third parties and responsible parties shall be equitably distributed among Aiding Units. Nothing herein shall operate to bar any recovery of funds from any state or federal agency under any existing state and federal laws.

SECTION SIX

Insurance

Each party hereto shall procure and maintain, at its sole and exclusive expense, insurance coverage, including: comprehensive liability, personal injury, property damage, worker's compensation, with minimum limits of $1,000,000 auto and $1,000,000 combined single limit general liability and professional liability. No party hereto shall have any obligation to provide or extend insurance coverage for any of the items enumerated herein to any other party hereto or its personnel. The obligations of the Section may be satisfied by a party's membership in a self-insurance pool, a self-insurance plan or arrangement with an insurance provider approved by the state of jurisdiction. The PWMAS may require that copies or other evidence of compliance with the provisions of this Section be provided to the PWMAS. Upon request, Member Units shall provide such evidence as herein provided to the PWMAS members.

SECTION SEVEN

Indemnification Liability and Waiver of Claims

Each party hereto agrees to waive all claims against all other parties hereto for any loss, damage, personal injury or death occurring in consequence of the performance of this Agreement; provided, however, that such claim is not a result of willful or reckless misconduct by a party hereto or its personnel. The Stricken Unit hereby expressly agrees to hold harmless, indemnify and defend the Aiding Unit and its personnel from any and all claims, demands, liability, losses, including attorney fees and costs, suits in
law or in equity which are made by a third party that may arise from providing aid pursuant to this Agreement.

All employee benefits, wage and disability payments, pensions and worker’s compensation claims, shall be the sole and exclusive responsibility of each party for its own employees provided, however, that such claim is not a result of reckless, wanton, or intentional misconduct by a party hereto or its personnel.

SECTION EIGHT
Non-Liability for Failure to Render Aid

The rendering of assistance under the terms of this Agreement shall not be mandatory and the Aiding Unit may refuse if local conditions of the Aiding Unit prohibit response. It is the responsibility of the Aiding Unit to immediately notify the Stricken Unit of the Aiding Unit’s inability to respond, however, failure to immediately notify the Stricken Unit of such inability to respond shall not constitute evidence of noncompliance with the terms of this section and no liability may be assigned.

No liability of any kind or nature shall be attributed to or be assumed, whether expressly or implied, by a party hereto, its duly authorized agents and personnel, for failure or refusal to render aid. Nor shall there be any liability of a party for withdrawal of aid once provided pursuant to the terms of this Agreement.

SECTION NINE
Non-Discrimination

In the performance of the services under this Agreement each party agrees not to discriminate against any employee or applicant because of race, religion, marital status, age, color, sex, handicap, national origin or ancestry, income level or source of income, arrest record or conviction record, less than honorable discharge, physical appearance, sexual orientation, political beliefs, or student status. Each party further agrees not to discriminate against any subcontractor or person who offers to subcontract on this contract because of race, religion, color, age, disability, sex, or national origin.
SECTION TEN

Term

This Agreement shall be in effect for a term of one year from the date of signature hereof and shall automatically renew for successive one year terms unless terminated in accordance with this Section.

Any party hereto may terminate its participation in this Agreement at any time, provided that the party wishing to terminate its participation in this Agreement shall give written notice to the Board of their Region and to the Executive Board specifying the date of termination, such notice to be given at least 90 calendar days prior to the specified date of termination of participation. The written notice provided herein shall be given by personal delivery, registered mail, or certified mail. In Wisconsin, a copy of such notice shall also be deposited with Legal Counsel, Wisconsin Emergency Management, 2400 Wright Street, Room 213, P.O. Box 7865, Madison, WI 53700-7865, telephone (608) 242-3232.

SECTION ELEVEN

Effectiveness

This Agreement shall be in full force and effective upon approval by the parties hereto in the manner provided by law and upon proper execution hereof. In Wisconsin, a copy of such agreement shall be deposited with Wisconsin Emergency Management, 2400 Wright Street, Room 213, P.O. Box 7865, Madison, WI 53700-7865, telephone (608) 242-3232.

SECTION TWELVE

Binding Effect

This Agreement shall be binding upon and inure to the benefit of any successor entity which may assume the obligations of any party hereto. Provided, however, that this Agreement may not be assigned by a Member Unit without prior written consent of the parties hereto.

SECTION THIRTEEN

Validity

The invalidity of any provision of this Agreement shall not render invalid any other provision. If, for any reason, any provision of this Agreement is determined by a court of competent jurisdiction to be invalid or unenforceable, that provision shall be deemed severable and this Agreement may be enforced with that provision severed or modified by court order.
SECTION FOURTEEN

Notices

All notices to terminate or join hereunder shall be in writing and shall be served personally, by
registered mail, or certified mail to the parties at such addresses as may be designated from time to time
on the PWMAS mailing lists or, to other such addresses as shall be agreed upon.

SECTION FIFTEEN

Governing Law

This Agreement shall be governed, interpreted, and construed in accordance with the laws of the
State of Wisconsin.

SECTION SIXTEEN

Execution in Counterparts

This Agreement may be executed in multiple counterparts or duplicate originals, each of which
shall constitute and be deemed as one and the same document.

SECTION SEVENTEEN

Executive Board of PWMAS

An Executive Board is hereby established to consider, adopt, and amend from time to time as
needed rules, procedures, by-laws, and any other matters deemed necessary by the Member Units. The
Executive Board shall consist of a member elected from each Region within PWMAS who shall serve as
the voting representative of said Region on PWMAS matters, and may appoint a designee. Such
designee shall be from within the respective Region and shall have all rights and privileges attendant to a
representative of that Member Unit.

A President and Vice President shall be elected from the representatives of the Member Units
and shall serve without compensation. The President and such other officers as are provided for in the
bylaws shall coordinate the activities of the PWMAS.
SECTION EIGHTEEN
Duties of the Executive Board

The Executive Board shall meet regularly to conduct business and to consider and publish the rules, procedures, and by laws of the PWMAS, which shall govern the Executive Board meetings and such other relevant matters as the Executive Board shall deem necessary.

SECTION NINETEEN
Rules and Procedure

Rules, procedures, and by laws of the PWMAS shall be established by the Member Units via the Executive Board as deemed necessary from time to time for the purpose of administrative functions, the exchange of information, and the common welfare of the PWMAS. In Wisconsin, PWMAS policies and general operating procedures shall be available on request without charge from Wisconsin Emergency Management, 2400 Wright Street, Room 213, P.O. Box 7865, Madison, WI 53700-7865, telephone (608) 242-3232. PWMAS policies and procedures may also be accessed from the Wisconsin Emergency Management webpage at http://emergencymanagement.wi.gov.

SECTION TWENTY
Amendments

This Agreement may only be amended by written consent of all the parties hereto. This shall not preclude the amendment of rules, procedures, and by laws of the PWMAS as established by the Executive Board to this Agreement. The undersigned unit of local government or public agency hereby has adopted, and subscribes to, and approves this Public Works Mutual Assistance Agreement to which this signature page will be attached, and agrees to be a party thereto and be bound by the terms thereof.

This Signatory certifies that this Public Works Mutual Assistance Agreement has been adopted and approved by ordinance, resolution, or other manner approved by law, a copy of which document is attached hereto.

ADDENDUM A TO PUBLIC WORKS MUTUAL ASSISTANCE AGREEMENT

RESOLUTION NO. ________________

WHEREAS, the Wisconsin Statute 66.0301(2) authorizes any municipality to contract with other municipalities and with federally recognized Indian tribes and bands in this state for the receipt or furnishing of services, such as public works services. Such a contract may be with municipalities of another state, as provided in Wisconsin Statute 66.0303(3)(b); and

WHEREAS, the (INSERT YOUR COMMUNITY) (GOVERNING BODY) believes that intergovernmental cooperation for purposes of public safety and protection should be encouraged and that the Public Works Mutual Assistance Agreement would afford these benefits to county residents by coordinating public works functions, as recommended in Resolution (INSERT RESOLUTION # AND DATE); and

WHEREAS, it is in the best interest of the (INSERT YOUR COMMUNITY) to enter into the proposed Public Works Mutual Assistance Agreement to provide for the coordination of public works services in the event of a large scale emergency, natural disaster, or man-made catastrophe.

WHEREAS, it is in the best interest to designate (INSERT POSITION) as the authorized representative of (INSERT YOUR COMMUNITY) for the Public Works Mutual Assistance Agreement.

NOW, THEREFORE, BE IT RESOLVED, that the Public Works Mutual Assistance Agreement, a copy of which is attached hereto and incorporated herein by reference, is hereby approved and the (INSERT TITLE OF ELECTED OFFICIAL, AND (CITY, TOWN, VILLAGE) CLERK), be authorized to execute the same on behalf of the (INSERT YOUR COMMUNITY)

Dated this __________ day of ________, 20XX

I. Introduction

It is recognized and acknowledged that in certain situations, such as, but not limited to, emergencies, natural disasters and man-made catastrophes, the use of an individual Member Unit’s personnel and equipment to perform functions outside the territorial limits of the Member Unit is desirable and necessary to preserve and protect the health, safety, and welfare of the public. Further, it is acknowledged by the State of Wisconsin that coordination of mutual assistance through the Wisconsin Public Works Mutual Assistance Agreement (WPWMAS) is desirable for the effective and efficient provision of mutual assistance.

With this as a backdrop, it has been the shared vision of public works professionals and the State of Wisconsin to develop a mutual assistance system wherein an affected jurisdiction can call upon resources of other jurisdictions in an orchestrated and organized effort to respond to an emergency or disaster. In many respects, the underpinning of the system is modeled after the very successful and highly regarded Mutual Aid System that has been a mainstay of fire and law enforcement departments all around the country. Noticeably, the public works plan differs to take into account the vast and varied nuances inherent with public works operations.

The goal of the WPWMAS is, by design, rather simple, but embodies critical tasks and associated responsibilities that will assist a requesting community for response efforts to their emergency or disaster.

I.A. Definitions

For the purpose of this Agreement, the following terms as used in this agreement shall be defined as follows:

**Authorized Representative**: A local unit of government’s employee who has been authorized, in writing by that party, to request, to offer, or to otherwise provide aid and assistance under the terms of the WPWMAS. The list of Authorized Representatives for each party shall be attached to the executed copy of this Agreement. In the event of a change of personnel, unless otherwise notified, the presumption will be the successor to the employee’s position will be authorized representative.

**Providing Agency**: The entity providing mutual aid assistance to a Requesting Agency pursuant to a local or statewide mutual assistance agreement, also known as an Aiding Unit or entity.

**Requesting Agency**: The entity that requests mutual aid assistance from a Providing Agency or emergency work resulting from an emergency or disaster, also known as a Stricken Unit or entity.

I.B. Mission Statement

It is the mission of the WPWMAS, in the spirit of intergovernmental cooperation, to develop and maintain a statewide network of public works related agencies whose principal purpose is to provide emergency assistance to each other in the event of disasters or emergencies.
II. Overview

II.A. General

The WPWMAS has been developed to provide public works assistance to member local units of government in need. This Plan details the steps involved in a mutual assistance response, from the initial request for public works resources to demobilization following the response. The National Response Framework (NRF) provides the guiding principles for public works to mitigate, prevent, prepare, plan, respond, and recover, from the effects of incidents in order to reduce the loss of life and property and harm to the environment. The Plan is intended to be flexible, providing an organized, sustainable response and recovery during incidents regardless of size. The Plan works within the National Incident Management System (NIMS). NIMS maintain that states should participate in these types of agreements and should look to establish intrastate agreements that encompass all local jurisdictions such as this agreement.

WPWMAS responses are based on missions or tasks to be completed. Knowing the mission allows Requesting Agency to request a Response Team with all the personnel and equipment needed to complete the mission safely. The work shifts are a maximum of 12 hours. When the work shift is over or the mission is completed, the Response Teams are relieved and return to their respective local units of government.

II.B. Liaison Officer

The position of Liaison Officer (LO) is critical to a successful response. The LO does not blindly fill equipment requests, but rather works with the Requesting Agency to identify options for providing the resources needed to satisfy the mission as efficiently as possible. The LO may be coordinating resources for multiple responses and multiple operational periods. In all cases, the LO works to insure that member resources are utilized appropriately and supported properly, and returned to their local units of government safely. The LO shall be designated by the Incident Commander (IC) or an appointed official from the requesting agency.

II.C. Response Team Concept

Member local units of government list their available resources as Response Teams, (i.e. one or two person teams) based on a function or task to be completed. Response Teams are deployed with all of the personnel and equipment needed to accomplish a specific task. If more than one Response Team is needed for an emergency or disaster, the LO will contact several local units of government to each send one Response Team, if possible.

The use of Response Teams provides several benefits:

II.C.1 The Requesting Agency is assured responders have the proper equipment to complete the mission.

II.C.2 Safety is improved as Response Teams bring the proper support equipment and PPE for the task.

II.C.3 Requesting Response Teams from several member units spreads out the impact of the response.

II.C.4 The use of pre-identified Response Team personnel and equipment provides consistency and improves the ability to provide an organized response.
III. Incident Categories

Resource requests are based on one of two incident or event categories: 1) Local Assistance, 2) Local or regional emergency and disaster. The protocols for resource requests and levels of coordination are detailed in the chapter for each category. It should be noted that our incident category, and thus our resource request protocols, will change as an incident expands or contracts.

III.A. Local Assistance

Local Assistance is the lowest category, providing limited direct assistance for planned events, small-scale incidents. A Local Assistance response will typically involve a single requesting agency, limited resource coordination, minimal resources, and few operational periods. Examples of this would be a flash flood, blizzard, or a microburst.

Process: The Requesting Agency makes direct contact to potential providing local units of government of the needed resources and makes arrangements to meet the need.

Potential reimbursement and costs for equipment and work done under a local assistance arrangement should be discussed PRIOR to deployment of resources and will be from the Requesting Agency.

Documentation: The Requesting Agency should document the situation including: what resources were received, what work was performed, and any cost arrangement made. The Requesting Agency completes the Requesting Assistance form (Appendix B) and sends it to the responding community. The responding community completes the Providers Response form (Appendix C) and sends back to the requesting agency.

III.B. Local or Regional Emergency and Disaster

III.B.1 Requesting Assistance

Below are suggested steps for your local unit of government to follow when using the Wisconsin Public Works Mutual Assistance Agreement. The parties to the Agreement are listed by agency, with a contact person, their phone number, and an emergency 24-hour phone number. Simply make the contact and obtain the assistance.

Local Assistance: The highest category is a declared emergency or major disaster, a catastrophic incident threatening loss of life or significant loss or damage to property. The incident typically impacts a larger geographic area or more than one community. Examples of this include a flood, ice storm, or a tornado.

a) Requesting Agency (Steps to Follow)

When your local unit of government is requesting assistance:

1) Assess the situation, determine the resources needed, and whether it exceeds your capabilities.

2) The LO shall contact your local Authorized Representative requesting assistance.

3) Locate local units of government included in the Agreement which is located on Wisconsin Emergency Management web site (TBA).

4) Call the local unit of government(s) listed that may have the resources you need.

5) Fill out the Requesting Agency’s Mutual Assistance Information form.
(6) Send copy of the form to the Responding Agency as soon as possible.

b) Responding Agency (Steps to Follow)

When your local unit of government is responding to a request for assistance:

(1) Make sure you can fulfill the request before giving an answer. Remember, you are not required to supply aid if you determine you cannot spare resources or if you do not have qualified personnel, appropriate equipment, and necessary materials for what is requested.

(2) Analyze the level of risk of the request.

(3) Complete the Provider’s Response form with the information given by the Requesting Agency.

(4) Brief your employees and prepare the equipment.

(5) Complete the Employee and Equipment Information form. Provide copies to your responding staff and to the Requesting Agency.

(6) Dispatch staff to the Requesting Agency for assistance.

c) Contact Person or Coordinator of Provider (Steps to Follow)

Carry a copy of the Requesting entity’s Mutual Assistance Information form and your Employee and Equipment Information form and provide a copy of each to the requesting entity.

(1) Remember, you are responsible for your crew working in a safe and professional manner.

(2) Track your equipment and materials inventory.

III.B.2 During the Response

The requesting agency informs the responding agency when requested resources have arrived at the staging area.

Communication between the Requesting Agency and the Responding Agency continue at various times during the operational period to discuss resource needs for future operational periods.

The Requesting Agency fully documents the situation under the local NIMS-Compliant Incident Command Structure, including incident objectives, resources received; work performed, cost arrangements, logistics arrangements, and other pertinent information.

The Responding Agency documents the contacts made, resources coordinated, response, and demobilization information.

III.B.3 Demobilization

The Requesting Agency informs the LO the mission has been completed and the Response Teams will be released. The LO informs the Responding Agency when demobilization will commence.

III.B.4 Additional Operational Periods

This process is to be repeated when resources are requested for additional operational periods. Should the LO for an incident change during the course of the incident, the outgoing LO shall fully brief the incoming LO as to the status of the response and shall
pass on any documentation related to the incident. All changes shall be communicated to the Incident Command staff.

It is generally expected that the resource needs of a local or regional emergency will be met with regional resources deployed on a daily basis. The LO should arrange for resources from agencies within a 2-hour travel distance of the incident, if possible. This would provide a 12-hour shift for responders, an 8-hour work shift, and 4-hours of travel time to and from the incident. Should the combined work shift and travel time exceed 12-hours, the Requesting Agency may be required to provide lodging and meals for responders.

In a multi-jurisdictional emergency, it is understood that the Requesting Agency may not be the effected community. A Multi-agency Coordination System such as a county emergency management agency may coordinate resource requests in some situations. There may also be public works resource responding through mutual aid agreements other than Wisconsin Public Works Mutual Assistance System (WPWMAS); for example the Wisconsin Water and Wastewater Agency Response Networks (WARN). In all cases, it is important that a single point of contact be established for each incident, and all public works resources should be coordinated through that one point of contact.

III.B.5 Common Communications

Common, reliable communications are essential to safe and effective operations. It is expected that the requesting agency will provide common communication equipment to responders. Should that not be possible, the LO shall work with other emergency management agencies to acquire the necessary equipment.

III.B.6 Finance

Each responding agency shall complete a detailed Reimbursement Summary form (Appendix F) and forward those forms to the Requesting Agency.

III.B.7 General Operational Rules

a) Response Teams, Task Force members, Task Force Leaders and Administrative Support Personnel shall not work more than a 12-hour “on-site” shift. Once the 12-hour limit has been reached, all engaged members will be relieved of their duties.

b) Response Teams, Task Force and Strike Teams will not engage in any activities for which they have not been properly trained.

c) Not more than one Response Team, Task Force Leader, or Administrative Support Personnel will be requested from each Responding Community. If, however, on their own volition, a Responding Community offers more than one Response Team, Task Force Leader, or Administrative Support Personnel, said offer will be honored by the Requesting Entity and number of people assigned. A Response Team or Task Force will be decided by the Responding Entity.

Appendix B. Request Assistance

<<Date>>

<<Name of Provider>>
<<Address of Provider>>

Dear <<Provider Contact>>;

This letter is to request aid and assistance pursuant to the Wisconsin Public Works Mutual Assistance Agreement adopted by your governing board.

The <<City/Village/Township of>> requests mutual aid for a disaster that <<is Imminent/is in progress/has occurred>>. <<Description of disaster, limit to three sentences>>.

The services requested are <<specify equipment, personnel, materials and/or supplies>>. The services will be required for <<length of time>> beginning <<date when assistance should arrive>>.

Please have your designated personnel meet <<your contact person>> at <<specify location>> at <<specify time>> on <<specify date>>.

Sincerely,

Name of Authorized Requesting Representative

I. Introduction

I.A. Purpose

I.A.1. Emergency Support Function (ESF) 4 establishes state level coordination of local and state resources to respond to structural, specialized, and wildland fires resulting from natural and manmade causes requiring fire suppression using principals identified in the National Incident Management System (NIMS).

I.B. Scope

I.B.1. ESF 4 is an integral element of the Wisconsin Emergency Response Plan (WERP) and applies to state agencies and state-owned firefighting equipment and resources.

I.B.2. ESF 4 supports and coordinates firefighting and EMS activities and provides personnel, equipment, and supplies in support of county, tribal, and local governments.

a) Fire service activities related to search and rescue (SAR) are covered in ESF 9.

b) Fire service activities related to hazardous materials responses are covered in ESF 10.

I.B.3. The Concept of Operations section of ESF 4 is sub-divided into two subparts.

a) Subpart A relates to all fire protection, prevention, and investigation except for wildland firefighting in unincorporated portions of the state.

b) Subpart B relates to wildland firefighting in unincorporated portions of the state. Wisconsin Statutes § 26.11 assigns responsibility for prevention, detection, and suppression of forest fires in unincorporated portions of Wisconsin to the DNR.

(1) NR 30.01 and NR 30.02 of the Wisconsin Administrative code authorizes the DNR Division of Forestry to assume command of firefighting operations in portions of Wisconsin covered by § 26.11.

(2) The DNR may request assistance for wildland firefighting through the Mutual Aid Box Alarm System – Wisconsin [MABAS WI] or other established mutual aid agreements. Agencies assisting the DNR at a wildland fire where the DNR has command shall follow policies, procedures, and protocols established by the DNR and published in DNR manuals, handbooks, and guidelines.
Within incorporated areas of Wisconsin, the DNR may respond to requests for wildland firefighting assistance from other agencies.

I.C. Policies

I.C.1. In accordance with § 323.13 (1)(c) and (d), Wis. Stats., firefighting operations are conducted using the Incident Command System (ICS).

I.C.2. Policies and procedures for on-scene fire service operations are contained in local agency standard operating procedures (SOPs), standard operating guidelines (SOGs), and other protocols.

I.C.3. Support for firefighting activities is prioritized first to the safety of human life, then to protection of property, and then to protection of the environment.

I.C.4. The established mechanism for a fire department to obtain emergency assistance from neighboring fire departments is through mutual aid.

a) Mutual aid agreements generally:

(1) Establish procedures for a fire department to obtain emergency services from another fire department without charge.

(2) Establish procedures for incorporating resources from outside jurisdictions into operations in the requesting jurisdiction.

(3) Establish policies regarding worker’s compensation, liability for firefighter injuries, support for firefighters and their equipment while deployed, and other administrative functions.

(4) Establish policies for reservicing, repair, or replacement of equipment provided under mutual aid and for workers compensation.

b) Wisconsin Administrative Code Chapter WEM 8 establishes policies and procedures for mutual aid through MABAS WI.

(1) The purpose of MABAS WI is to coordinate the effective and efficient provision of mutual aid during emergencies, natural disasters, or manmade catastrophes. MABAS WI is not intended to relieve a community of their responsibilities to provide adequate emergency services for local emergencies. When a local unit of government exhausts its resources, MABAS WI can be activated by the stricken community and through a systematic plan. MABAS WI will provide:

(a) Immediate assistance to a requesting jurisdiction with personnel and equipment.

(b) Response teams of: firefighters, emergency medical personnel, hazardous materials teams, technical rescue specialists, dive teams, etc.

(c) Access to specialized equipment.

(d) A contractual agreement covering responsibilities and liabilities for its members.

(e) Standardized policies and procedures for mutual aid.

(f) An organization comprising fire departments from Illinois, Indiana, Iowa, Missouri, Michigan, and Wisconsin.

(2) Access to MABAS WI:
(a) For fire departments is through the VHF Interagency Fire Emergency Radio Network (IFERN) radio frequency using procedures published by MABAS WI.

(b) For entities other than fire departments is through the WEM Duty Officer (DO) system or the WEM Fire Service Coordinator (FSC).

(3) MABAS Wisconsin Policies, Procedures, & Guidelines and other information relating to MABAS WI is available on their website http://www.mabaswisconsin.org.

c) Additional personnel and equipment resources are available outside the MABAS WI system and include:

(1) Mutual Aid Net, a software application provided jointly by the International Association of Fire Chiefs and FEMA to serve as a resource database and mutual aid deployment tool.

(2) WI DOC inmate task forces and strike teams and DNR wildland firefighting personnel and equipment. These resources can be made available through the State Emergency Operations Center (SEOC) or WEM DO system.

(3) WING resources through the WING Joint Operations Center (JOC).

(4) Interstate mutual aid agreements between Wisconsin and surrounding states through standing mutual aid agreements between municipalities or through the Emergency Management Assistance Compact (EMAC) requested by the SEOC or WEM DO system.

(5) Federal resources through a joint field office (JFO), where established, or through the FEMA Region V Regional Response Coordination Center (RRCC). Such requests are made through the SEOC or the WEM DO system.

d) The size or complexity of an incident may dictate whether a local jurisdiction should request one or more incident management teams (IMTs)

(1) If the SEOC is at Level 5 or Level 4, the request is through the WEM DO system

(2) If the SEOC is at Level 3 or above, the request is though the SEOC

I.C.5. Situation and damage assessment information is transmitted through established channels:

a) If the SEOC is at Level 5 or Level 4, information is transmitted through the WEM DO system.

b) If the SEOC is at Level 3 or above, information is transmitted through the SEOC.

II. Concept of Operations – Municipal Firefighting

II.A. General

II.A.1. Municipalities are responsible for fire prevention, protection, and origin and cause investigation within their jurisdiction. This responsibility is met by either establishing a fire department, or by contracting with other municipalities that have fire departments.

a) DSPS/Division of Safety and Buildings, regulates firefighter health and safety, administers the state’s Fire Prevention Code, and maintains a list of recognized public and private fire departments.
II.A.2. Certain larger industrial companies establish fire brigades for quick response to fires on their properties. Fire brigades provide only first response capability and are augmented by municipal fire departments for sustained operations.

II.A.3. Larger airports may establish an aircraft crash-rescue fire department or contract for such service for quick response to airfield incidents. The quantity and volatility of aircraft fuels cause rapidly expanding fires that can cause loss of life and very high dollar losses. As with industrial fire brigades, most crash-rescue fire departments are augmented by municipal fire departments for sustained operations.

II.A.4. State level support for firefighting activities is provided:
   a) If the SEOC is at Level 5 or Level 4, through the WEM DO system
   b) If the SEOC is at Level 3 or above, though the SEOC

II.B. Wisconsin Fire Service Emergency Response Plan

II.B.1. WEM, through the FSC, the Wisconsin State Fire Chiefs Association, and MABAS WI have collaborated to create the Wisconsin Fire Service Emergency Response Plan. The plan provides fire chiefs with access to a large pool of fire service resources, which may be needed when local and mutual aid resources are, or may become, depleted. The plan provides for the systematic organization, mobilization, deployment, and management of resources at a major fire, disaster, or other emergency.

II.B.2. The Wisconsin Fire Service Emergency Response Plan primarily addresses fire departments participating in MABAS WI. Fire departments which are not members of MABAS WI may also request resources through the plan.

II.B.3. The SEOC, WEM FSC, WEM DO, and WEM senior duty officer (SDO) utilize the plan to coordinate all fire service related resources throughout Wisconsin. The Wisconsin Fire Service Emergency Response Plan:
   a) Provides a simple method to quickly activate fire, rescue, EMS, and specialized personnel and equipment.
   b) Provides an interface between MABAS WI and the WERP.
   c) Complements other emergency management plans at the local and state level.
   d) Does not diminish or replace local command and control of an incident or the initial response of MABAS WI resources.

II.B.4. The Wisconsin Fire Service Emergency Response Plan is activated through a request to the WEM DO system. Information the WEM DO or SDO will require can be found in the DO’s Incident Assessment Checklist, as well as in of the Wisconsin Fire Service Emergency Response Plan.

II.C. ESF 4 Mobilization Triggers

II.C.1. ESF 4 may be activated when:
   a) A local jurisdiction requests fire service resources beyond those available locally or through existing mutual aid agreements due to a specific incident.
   b) The fire service resources within an area of the state are drawn down to a point where they may be overwhelmed should a large incident occur.
c) A larger incident or disaster creates a fire danger that locally available resources may not be able to control.

d) In the judgment of the responsible local officials, additional fire service resources beyond those available locally or through existing mutual aid agreements are required.

II.C.2. ESF 4 may be activated by:

a) The adjutant general

b) The WEM administrator, WEM FSC, WEM DO, or SDO

c) The SEOC Manager when the SEOC is at Level 3 or above

d) A county emergency management director or WEM regional director

e) DNR

II.D. Organization

II.D.1. The ESF 4 coordinator is:

a) When the SEOC is at Level 5 or Level 4, the WEM FSC or the WEM DO or SDO.

b) When the SEOC is at Level 3 or above, the WEM FSC or the ESF 4 representative in the SEOC.

II.E. ESF Activities

The WERP Basic Plan defines standardized tasks that constitute the prevention, protection, mitigation, response, and recovery responsibilities of any agency that serves a role in emergency management. This section defines those activities that are unique to ESF 4, and it is intended to be used in conjunction with the common tasks outlined in the WERP Basic Plan.

| **Department of Military Affairs/ Wisconsin Emergency Management** | **Warning and Communications Officer:**  
- Provide interoperable communications capabilities and equipment through the WEM Warning and Communications Officer in accordance with ESF 2, including:  
  - Portable radio repeaters on designated interoperable frequencies.  
  - Radio interconnection equipment (ACU-1000, etc.).  
  - Portable two-way radio equipment.  
  - Redundant communications capabilities through Wisconsin RACES and other sources.  
  - Satellite telephone equipment.  
- Coordinate with the Logistics Section for procurements of specialized security-related resources.  
- When requested, provide and operate mobile command and control centers.  
| **WEM EPS Deputy Director:**  
- Coordinate incident related law enforcement resource requests through the Area EPS Directors:  
  - Act as point of contact for regional or statewide mutual aid law enforcement resources.  
  - Assist in coordinating local law enforcement response, as requested.  
  - Coordinate with the affected county(ies) for dispatching EPS resources.  
- Participate in state, county, tribal or local EOCs, as requested.  
- When requested, coordinate assistance from other law enforcement agencies including:  
  - DNR law enforcement section.  
  - Other state’s law enforcement agencies through interstate mutual aid agreements.  
  - WING through the JOC.  
  - Federal law enforcement agencies through EMAC.  
- Assist and provide security for SAR units (DNR, WSP, WI Wing CAP, USAR, and federal assets) in accordance with ESF 9.  
- Coordinate with ESF 13 and ESF 1 for security of evacuation routes.  
| **WEM FSC:**  
- Act as the point of contact for MABAS WI to ESF 4 via the WEM Duty Officer system or the SEOC, as appropriate.  
- Encourage development of MABAS WI throughout Wisconsin.  
- Coordinate with ESF 13 through the WEM Deputy EPS Director.  
- Coordinate with ESF 9 for SAR resources.  
| **Training & Exercise:**  
- Work with counties, tribes, and local units of government to develop and conduct training and exercise programs for ESF 4 functions. |
III.B. Wisconsin Governmental Support Agencies

Table 6: State Government Support Agencies Functions

<table>
<thead>
<tr>
<th>Agency</th>
<th>Functions</th>
</tr>
</thead>
</table>
| Department of Justice           | **Division of Criminal Investigation**  
• Conduct fire origin and cause investigations for all fatal fires or fires with $1,000,000 in losses.  
• Upon request, assist with fire origin and cause investigations for fires not meeting the above thresholds.  
• When required or when requested by local jurisdictions, conduct fire origin and cause investigations. |
| Department of Safety & Professional Services | • Conduct building and fire detection and suppression plans reviews. |
| Local Jurisdictions             | • Develop local ordinances to minimize the threat of hostile fires.  
• Develop and conduct an effective fire safety inspection program for all buildings covered by the Wisconsin Fire Safety Code.  
• Identify gaps between vulnerabilities and available resources and provide necessary resources through MABAS WI or mutual aid agreements.  
• Develop, deploy, and maintain a means to receive and respond to requests for emergency fire protection services and dispatch including accountability of fire department resources.  
• Identify training and education needs and shortfalls for responders, command staff, and elected officials, and provide necessary training.  
• Conduct public fire safety education programs to reduce or eliminate human causes of hostile fire.  
• Identify mitigation and preparedness support resources such as program funding.  
• Prioritize the deployment of resources for fire suppression.  
• Respond to and suppress hostile fires.  
• Conduct fire origin and cause investigations.  
• Utilize the ICS for command and control of all emergency response resources at emergency scenes.  
• Assess the need for and acquisition of resources beyond those immediately available.  
• Establish and maintain contact with the WEM FSC:  
  o Request additional resources through MABAS WI.  
  o Provide updated incident status information to maintain situational awareness.  
  o Provide information on damage, fatalities, injuries, evacuated facilities and persons, shelter information, and other information pertinent to the incident. |
| Owning Agencies                 | • Inventory, repair, and replace equipment used in response and suppression of hostile fires.                                                                                                           |

IV. Concept of Operations – Wildland Forest Firefighting

IV.A. General

IV.A.1. Management of DNR fire suppression resources is coordinated through the DNR district forestry leadership with direction and oversight from the DNR Command Center.
IV.A.2. During a wildland fire emergency where the DNR has command authority:

a) The DNR Command Center is operated for the duration of the incident and provides broad policy, coordination, and logistical support to affected agencies and personnel.

b) Responsibility for fire assessment and resource requirements lies with the DNR Incident Commander in coordination with the district forestry leadership and the DNR Command Center.

   (1) The District Forestry Leader submits equipment and personnel resource requests to the DNR Command Center.

   (2) In cases where multiple significant wildland fires are occurring simultaneously, the DNR Command Center prioritizes resource allocations based on:

      (a) Life safety considerations to responders and the general public.

      (b) Property protection and conservation.

      (c) Natural resources protection and conservation.

   (3) The DNR Command Center coordinates filling equipment and personnel resource requests from within Wisconsin. When required resources are not available in-state, the DNR Command Center requests resources through the Great Lakes Forest Fire Compact or through the Eastern Area Coordination Center, as needed.

IV.B. Organization

IV.B.1. The DNR is organized into four forestry administrative districts. Each administrative district has one incident management team (IMT). Within this district system, the Forestry Program has eight areas identified within the organized fire protection areas of Wisconsin where the DNR has initial attack responsibilities for wildland fires. Within each of these eight areas, the DNR Forestry Program has the following wildland firefighting resources:

a) An Area Forestry Leader (Incident Commander Type 3 minimum qualification)

b) Dispatch center

c) Wildland fire suppression equipment (e.g. engines, tractor-plows, low ground units, etc.)

d) Wildland firefighting equipment cache, including personal protective equipment (PPE), suppression equipment, and support equipment for one 20-person hand crew.

e) Forest Rangers for operational IMT roles, fire investigation, and law enforcement activities pertaining to wildland fire situations

IV.B.2. All areas outside the organized fire protection areas are considered the cooperative area. Within the cooperative area, the local affected municipality can request the DNR to assume command of a wildland fire after the expenditure of $3000 in suppression activities.

a) Should it become necessary, due to the size, scope, or magnitude of the incident, to transfer command to a DNR IMT, a written “Delegation of Authority” must be provided specifying the authority being granted to the DNR IMT by the local municipality.
IV.C. ESF Activities

The WERP Basic Plan defines standardized tasks that constitute the prevention, protection, mitigation, response, and recovery responsibilities of any agency that serves a role in emergency management. This section defines those activities that are unique to ESF 4, and it is intended to be used in conjunction with the common tasks outlined in the WERP Basic Plan.

DELEGATION OF AUTHORITY

The __________________ Fire Department is the fire suppression contract agent for the Village/Town/City of ________________.

A fire at the __________________ facility located in ________________ has exhausted local resources from the __________________ Fire Department and neighboring fire departments. Fire Chief ________________ has requested mutual aid “Command Staff (Chief Officers)” to respond to the fire scene to provide relief. Chief Officers from ________________ and ________________ Village/Town/City/County have responded to the fire scene for relief of the local resources. Chief ________________ will provide a complete briefing to the relief officers along with the written Incident Action Plan for the “operational period” beginning at 12:00 hours, month/day/year and concluding at 23:59 hours, month/day/year.

As the Chief Elected Official of the Village/Town/City/County of ________________, I, __________________ authorize this “transfer of command” to allow the firefighting operations at __________________ to continue without interruption and within the scope of acceptable and standard “defensive structural firefighting” procedures.

The in-coming Incident Commander has authorization to expend $XXX.XX on behalf of the Village/Town/City/County of ________________, without my approval to support the fire departments engaged at the ________________ fire. Any fiscal expenditure beyond the amount authorized shall be in writing by me and the Village/Town/City/County of ________________, governing body.

## I. Introduction

### I.A. Purpose

To coordinate Wisconsin’s emergency management program by providing the core management, administrative, and strategic functions to support response and recovery to significant incidents affecting local and state emergency operations.

### I.B. Scope

Provides for organized coordination, from WEM and the state emergency operations center (SEOC), of response to and recovery from emergencies, including:

- **I.B.1** Collection, analysis, and distribution of intelligence about potential or actual emergencies.
- **I.B.2** Coordination of state personnel, resources, and tasking in support of local and county and tribal emergency prevention, protection, mitigation response, and recovery.
- **I.B.3** Support and coordination of statewide mutual aid agreements under Wisconsin Statutes §§ 66.0312, 66.03125, 66.0313, and 66.0314 and interstate requests through the Emergency Management Assistance Compact (EMAC) under § 323.80 as well as Canadian province requests through the State and Province Emergency Management Assistance Compact (NEMAC) under § 323.81.
- **I.B.4** Coordination, processing, and monitoring of all requests for federal assistance for the state, counties and tribes through FEMA Region V.

### I.C. Policies

- **I.C.1** ESF 5 establishes the state support infrastructure for hazard prevention, protection, mitigation, response, and recovery.
- **I.C.2** ESF 5 engages all local, county, tribal, federal, volunteer agencies, and private sector partners at the SEOC, or other state coordination centers, in incident action planning.
I.C.3 ESF 5 serves as the single point of coordination between FEMA, state agencies, tribal, county and local EOCs, and incident commanders for:

a) Situation reports
b) Requests for assistance
c) Keeping appropriate authorities and the public informed of status of the incident.

II. Concept of Operations

This section specifically addresses the operational systems in place for the response and recovery phases of an incident requiring state support to one or more locations. An adjunct to this ESF is the SEOC Operations Manual, which provides detailed checklists for each SEOC position.

II.A. General

II.A.1 Location

a) The primary SEOC location is at the Department of Military Affairs, Joint Forces Headquarters, Room A111, 2400 Wright Street, Madison, Wisconsin.

(1) The SEOC is equipped with a generator for emergency power.

(2) A chart illustrating the SEOC layout is located in the SEOC Operations Manual.

b) Mobilization to an alternate SEOC is described in the DMA/WEM Continuity of Operations Plan (COOP). There are two alternate SEOC locations.

(1) Armed Forces Reserve Center, 6001 Manufacturers Drive, Madison, Wisconsin.

(2) REACT Center/Volk Field Air National Guard Base, near Camp Douglas, Wisconsin.

II.A.2 ESF 5 provides trained and experienced staff to fill SEOC administrative and support positions in:

a) SEOC management
b) Operations section
c) Planning section
d) Logistics section
e) Finance section

II.A.3 In the context of ESF 5, the role of state agencies involved in emergency response and recovery is:

a) Collection of relevant information
b) Development of plans, reports, and resource requests in accordance with relevant ESFs and Standard Operating Procedures (SOPs) and informed by collected information.

II.A.4 WebEOC serves as the secure online incident management system through which all state emergency operations activities are managed.
II.B. Readiness Levels

The SEOC is operated at one of five readiness levels. Readiness levels range from the lowest (Level 5), described as steady-state operation of DMA/WEM, to the highest (Level 1), representing full-scale operation of the SEOC.

II.B.1 Authority

The governor, adjutant general, WEM administrator, and SDO have the authority to elevate SEOC operation to any other level they deem appropriate.

II.B.2 Considerations for determining the SEOC operation level include, but are not limited to:

a) Tornado warnings for multiple counties
b) Winter storm or blizzard warning
c) Prediction of heavy rate of snowfall
d) Imminent threat of flash flooding
e) Large evacuation
f) Shelters opening in response to large evacuations
g) Other severe weather factors such as:
   (1) Number of counties affected
   (2) Population in the affected counties
   (3) Transportation and infrastructure affected
   (4) Ability of staff to respond to SEOC
   (5) Potential for extensive power outages
   (6) Timing of the weather incident (e.g. holiday travel, ongoing special events, etc.)
h) Incidents that cause significant disruption to community activities and affect public safety
   i) Closure of major portions of the interstate system
   j) Potential or actual impacts on critical infrastructure
   k) Resource requests or need for involvement of multiple state agencies

II.B.3 Readiness Levels

a) Level 5 (Steady State Operations)
   (1) Description
   Steady state operations of DMA/WEM and the Duty Officer (DO) System. The SEOC is not open.
   (2) Staffing
   Duty Officer (DO) and Senior Duty Officer (SDO).
   (3) Activities
(a) DO maintains communications with affected jurisdiction(s) at the direction of the SDO.
(b) DO may create a WebEOC incident board, as necessary.
(c) WEM PIO generates press releases, as necessary.

(4) FEMA Regional Response Coordination Center (RRCC) “Activation Level”

Generally aligns with the Steady State or smaller Enhanced Watch activation level.

b) Level 4 (Enhanced Monitoring Operations)

(1) Description
Enhanced level of monitoring of local incidents or any imminent threats that may require state support.

(2) Staffing
Anticipated staffing may include, but is not limited to: SDO, DO, DMA Public Affairs Office (PAO), WisDOT, and Wisconsin State Patrol.

(3) Activities
(a) WEM DO creates a WebEOC incident board and notifies identified SEOC staff using WebEOC Alert message.
(b) SEOC staff may be directed to operate from the SEOC or to operate in the WebEOC virtual environment, at the discretion of the SDO.
(c) SEOC staff maintains communication with affected jurisdiction(s) to maintain an enhanced level of situational awareness and to coordinate any resource requests.

(4) FEMA RRCC “Activation Level”
Generally aligns with the Enhanced Watch activation level.

c) Level 3 (Minimal SEOC Operations)

(1) Description
Minimal operation of the SEOC. Intended for:

(a) Supporting smaller scale incidents where a jurisdiction requests state level support.
(b) Actively monitoring severe weather conditions.

(2) Staffing
Anticipated staffing may include, but is not limited to: SDO, DO, DMA PAO, WisDOT, Wisconsin State Patrol, and National Weather Service (NWS), as needed.

(3) Activities
(a) SEOC opened.
(b) WebEOC incident board created and maintained.
(c) SEOC staff maintains communication with affected jurisdiction(s) and coordinates requests for state level support.
(4) FEMA RRCC “Activation Level”
Generally aligns with the Enhanced Watch or Level 3 activation level.

d) Level 2 (Partial SEOC Operations)

(1) Description
Partial operation of the SEOC intended to support incidents where one or more jurisdictions request state support.

(2) Staffing
Anticipated staffing may include, but is not limited to: full SEOC Management Staff, partial or full General Staff, and targeted ESF activation as required by the incident.

(3) Activities
Same as Readiness Level 3 as well as:
(a) Activated ESF support to affected jurisdictions
(b) Regional Director(s) dispatched to support county emergency manager(s).

(4) FEMA RRCC “Activation Level”
Generally aligns with the Level 3 or Level 2 activation level.

e) Level 1 (Full-Scale SEOC Operations)

(1) Description
Full scale operation of the SEOC intended to support:
(a) Complex incidents
(b) Incidents involving large areas of Wisconsin
(c) Incidents involving multiple jurisdictions requesting state-level support.

(2) Staffing
Anticipated staffing may include, but is not limited to: SEOC Policy Group, full SEOC Management Staff, full General Staff, and activation or all or most ESFs as required by the incident.

(3) Activities
Same as Readiness Level 2, including support of all or most ESFs.

(4) FEMA RRCC “Activation Level”
Generally aligns with the Level 1 activation level.

II.C. Staffing Considerations
When an elevation of the SEOC to Level 3 or above is anticipated to exceed 12 hours the SEOC manager may initiate the following:

II.C.1 Direct the planning section to develop staffing rosters with shift changes every 12 hours. An example is 07:00 (7 a.m.) to 19:00 (7 p.m.) and 19:00 (7 p.m.) to 07:00 (7 a.m.)
II.C.2 Direct the logistics section to provide meals and refreshment for SEOC staff.

II.C.3 Request the WING to provide cots.

II.D. Organizational System

The SEOC is generally organized consistent with the National Incident Management System (NIMS). Specific NIMS nomenclature has been modified to reflect that Wisconsin is a home-rule state and the SEOC supports local units of government emergency management efforts.

II.D.1 Management staff

The policy and decision-making level of the SEOC organization consist of:

a) SEOC policy group consisting of:
   (1) Governor
   (2) Adjutant general
   (3) WEM administrator
   (4) General counsel

b) SEOC manager and deputy SEOC manager
   (1) Directs all SEOC operations; approves incident action plan; ensures that all functional activities within the SEOC are appropriately activated, staffed, and operating effectively.
   (2) Supervises additional management staff, including:
      (a) Network operations
         Maintains WebEOC, manages audio and visual equipment and presentations in the SEOC, and coordinates with ESF 2 for SEOC communications needs.
      (b) EOC security
         Controls access and provides 24-hour security to the SEOC.
      (c) Public information (ESF 15)
         Coordinates public information, including implementation of WI-DIAL, and public affairs activities between involved agencies; handles all media requests or inquiries for emergency-related information; and will draw staffing from other state agencies, as necessary.
      (d) EOC safety officer
         Monitors incident operations and advises the SEOC manager on all matters relating to operational safety, including the health and safety of emergency responder personnel and SEOC staff.

II.D.2 General staff

The analysis, advisory, and operational level of the SEOC organization consists of:

a) Planning section

The planning section is led by a section chief. The planning section chief may be supported by a deputy section chief. The planning section collects, evaluates, processes, and distributes information and intelligence about the emergency to all
Wisconsin Emergency Response Plan
Emergency Management

functional elements and agencies in the SEOC; maintains all internal wall displays; and prepares incident action plans and situation reports. Planning section units may include:

1) **Situation unit**

2) **Communications unit**
   (a) IT support
   (b) WebEOC support

3) **Documentation unit**
   (a) EOC runner
   (b) Document handler

4) **GIS/map unit.**

5) **Technical specialist unit**
   (a) Weather specialist

6) **Demobilization unit**

b) **Operations section**

The operations section is led by a section chief. The operations section chief may be supported by a deputy section chief. The operations section implements the incident action plans (IAPs) and ensures that all essential emergency-related information and resource requests are received, processed, and internally coordinated within the SEOC. Operation section branches may include:

1) **Emergency services branch**
   (a) ESF 4
   (b) ESF 9
   (c) ESF 10
   (d) ESF 13

2) **Human services branch**
   (a) ESF 6
   (b) ESF 8
   (c) ESF 11

3) **Infrastructure branch**
   (a) ESF 3
   (b) ESF 12
   (c) ESF 1

c) **Logistics section (ESF 7)**

   The logistics section is led by a section chief. The logistics section chief may be supported by a deputy section chief. The logistics section obtains and provides essential personnel, facilities, equipment, supplies, and services not found within...
those functions and departments represented in the SEOC operations section in accordance with ESF 7. Logistic section branches may include:

(1) Services branch
   (a) Communications unit (ESF 2)
      (i) WI ARES/RACES
   (b) Food service unit (ESF 11)
   (c) Commodities unit (ESF 11)

(2) Support branch
   (a) Ground support (ESF 1)
   (b) Supply unit
   (c) Facilities unit
   (d) Resource unit (ESF 7)

d) Finance section
   The finance section is led by a section chief. The finance section chief may be supported by a deputy section chief. The finance section provides general administrative and finance support related to SEOC activities and field services. Finance section units may include:

(1) Time unit

(2) Procurement unit

The chart on the following page illustrates the organization of SEOC staff.
Figure 1: SEOC Organizational Chart
II.E. State Disaster Declaration

In accordance with § 323.10, Wis.Stats., the governor may issue an executive order declaring a state of emergency for the state or any portion of the state if he or she determines that an emergency resulting from a disaster or the imminent threat of a disaster exists.

II.E.1 The WEM administrator, in coordination with the SEOC manager, recommends to the adjutant general that the governor declare a state of emergency.

II.E.2 Upon receiving concurrence from the adjutant general, relevant disaster details are provided to the DMA general counsel or qualified SEOC staff, who draft a proposed executive order. Templates are provided on WebEOC. (Open the Advanced File Library board and navigate to SEOC > Governor's Declaration Templates)

II.E.3 Following a final review of the proposed executive order, the WEM administrator or DMA general counsel submits the draft executive order to the governor’s deputy legal counsel, who obtains final authorization from the governor.

II.E.4 Upon execution by the governor, the governor’s office transmits the executive order to the secretary of state for publication.

II.F. Presidential Disaster Declaration

II.F.1 Once the governor has declared a state of emergency, assessments may begin to determine whether the disaster has the potential to merit a presidential disaster declaration.

II.F.2 ESF 5 coordinates with FEMA Region V to assess state and local resource needs and identify specific requests for federal emergency management assistance.

II.F.3 Based on the preliminary damage assessment (PDA), the governor may request a presidential disaster declaration.

II.F.4 If the presidential disaster declaration is approved, the state coordinating officer (SCO) works with FEMA Region V to identify a suitable location for the joint field office (JFO).

II.F.5 FEMA appoints a federal coordinating officer (FCO) who has the authority to establish a JFO to administer the presidential disaster declaration.

II.G. Federal Support Organization

II.G.1 National Response Coordination Center (NRCC)

a) Monitors potential or developing incidents.

b) Issues alerts, notifications, and situation reports.

c) Develops national-level plans.

d) Supports federal regional and field operations.

II.G.2 FEMA Region V Regional Response Coordination Center (RRCC)

a) Makes initial contact with the affected states.

b) Determines initial response requirements and objectives for federal assistance.

c) Coordinates operations and situational reporting until a JFO is established.
II.G.3 Joint Field Office

a) Once a presidential disaster declaration is approved, coordinates federal assistance in support of state, tribal, and local response efforts.

b) Establishes joint plans with state and tribal response partners.

c) Reports information to the RRCC and NRCC.

d) Transitions operations back to the RRCC during demobilization.

II.G.4 Disaster Recovery Center (DRC)

a) A satellite component of the JFO where survivors of a declared disaster can obtain information on disaster recovery assistance programs from various federal, state, tribal, local, and private organizations.

III. Agency Responsibilities

The WERP Basic Plan defines standardized tasks that constitute prevention, protection, mitigation, response, and recovery responsibilities of any agency serving a role in emergency management. The following defines those responsibilities unique to ESF 5, and is intended to be used in conjunction with the common tasks outlined in the WERP Basic Plan and with the specific duties assigned in the remaining ESFs.

III.A. Lead Agency – Department of Military Affairs

<table>
<thead>
<tr>
<th>Agency</th>
<th>Functions</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Prevention and Protection</strong></td>
<td>Maintain the WEM DO system, WebEOC, the SEOC, and other notification and warning systems as detailed in ESF 2.</td>
</tr>
<tr>
<td></td>
<td>Develop and maintain geographical information systems (GIS) capabilities and data to support agency requirements.</td>
</tr>
<tr>
<td></td>
<td>Establish data-sharing agreements between agencies.</td>
</tr>
<tr>
<td></td>
<td>Direct the development and maintenance of the WERP.</td>
</tr>
<tr>
<td></td>
<td>Train and exercise ESF 5 personnel.</td>
</tr>
<tr>
<td></td>
<td>Coordinate emergency management preparedness activities through the county emergency management director, other county agencies, and the WEM regional directors.</td>
</tr>
</tbody>
</table>

**Mitigation (Pre-Disaster)**

- Implement and administer the FEMA Pre-Disaster Mitigation (PDM) grant program.
- Provide technical resources to state, tribal, and local governments in developing and updating of all hazard mitigation plans.
- Provide technical resources to state, tribal, and local governments in identifying and implementing mitigation measures that will reduce future disaster losses.
- With the assistance of the Wisconsin Silver Jackets Hazard Mitigation Team (WSJHMT) maintain a FEMA-approved State of Wisconsin Hazard Mitigation Plan.
### Agency

#### Mitigation (Post-Disaster)
- Use damage assessment information to identify mitigation opportunities.
- Convene and coordinate the WSJHMT to identify and discuss mitigation opportunities; identify available funding and technical resources to assist state, local, and tribal governments in implementing feasible, long-term mitigation measures; and prevent duplication of programs and efforts among the agencies.
- Implement and administer the FEMA Hazard Mitigation Grant Program (HMGP).
- Chair the Wisconsin Recovery Task Force Mitigation Subcommittee.

#### Response
- Establish communications with the appropriate WEM regional director, state agencies, local and tribal governments, and FEMA Region V.
- Elevate SEOC and staff ESFs, as necessary.
  - Implement coordination systems as defined in the Concept of Operations section of this ESF.
  - Provide for:
    - Information collection, analysis, and management to develop a common operating picture.
    - SEOC incident action planning.
    - SEOC coordination of operations.
    - Resource acquisition and management, as requested by local, tribal, and county EOCs and incident command post.
    - Deployment and staffing.
    - Logistics management.
    - Facilities management.
    - Financial management.
    - SEOC worker safety and health.
- Coordinate state public information activities.
- Dispatch the mobile command center (MCC) and other state agency or WING assets, as appropriate.
- Coordinate deployment of emergency response teams to conduct operational support functions (e.g. Multi-Agency Coordination (MAC) elements, incident management teams).
- Coordinate mutual aid activities including EMAC, NEMAC, and private organization assets.
- Prepare regular status reports on the situation for the governor, state agencies, federal and state legislators, and FEMA.
- Prepare executive orders and proclamations to address state response and recovery operations for the governor, as necessary.
- Provide SCO to JFO upon activation.
- Provide for COOP planning and an alternate SEOC.
- Activate the alternate SEOC and direct staff to relocate at the direction of the SEOC manager.
### Agency Functions

**Recovery**
- Coordinate damage assessment information from uniform disaster situation reports (UDSR), followed by preliminary damage assessment (PDA), as appropriate.
- Keep accurate records of disaster-related expenditures by each ESF.
- Request a presidential disaster declaration at the governor’s direction.
- Develop and coordinate a recovery plan and process with local, county, and state agencies, tribal government, and private organizations.
  - Coordinate multi-state agency and private organization staffing and support for recovery activities such as community relations, disaster recovery centers, and the JFO.
  - Implement and administer state and federal disaster assistance programs.
  - Activate and coordinate the efforts of the WSJHMT.
  - Implement and administer long-term recovery activities through local and state agencies, local agencies, tribal governments, and private organizations.
- Disseminate recovery information, plans, and reports to the SEOC.
- Coordinate demobilization activities.
  - Demobilize the MCC, as appropriate.
  - Demobilize SEOC operations, as appropriate.

### III.B. Wisconsin Governmental Support Agencies

#### Table 3: State Government Support Agencies Functions

<table>
<thead>
<tr>
<th>Agency</th>
<th>Functions</th>
</tr>
</thead>
</table>
| **Common Responsibilities** | • Support prevention, protection, mitigation, response, and recovery activities as outlined in the Basic Plan and applicable ESFs and SOPs.  
• Coordinate the flow of notifications received through the WEM DO system to ensure appropriate response.  
• Provide liaison to the SEOC, local and county EOC, tribal EOC, and incident command post, as necessary.  
• Coordinate the internal flow of information among incident response partners (e.g. field units, intergovernmental stakeholders).  
  - Coordinate the flow of messages into and out of the activated ESF; provide direction and control for ESFs; and coordinate the activities of each ESF with the activities of other ESFs.  
  - Coordinate their ESF’s contributions to the development of the incident action plan, briefings, and situation reports for each operational period identified.  
  - Provide the SEOC manager with up-to-date status reports on operational activities throughout the response and recovery phases of the disaster; and update WebEOC for situational awareness.  
• Coordinate the external flow of information with the DMA PAO, JIC, and other agency public information officers. |
<table>
<thead>
<tr>
<th>Agency</th>
<th>Functions</th>
</tr>
</thead>
</table>
| Department of Administration             | • Provide intelligence to the SEOC relative to cyber-attack(s).  
• Provide technological support to the SEOC.  
  o Provide expedited problem resolution to state agency information technology networks and systems.  
  o Coordinate state agency GIS professionals through the State Geographic Information Officer to support the SEOC’s GIS needs.  
• Provide expedited procurement to support state agency disaster response activities, as needed.  
• Coordinate and provide direction on state personnel policies through the Office of State Employment Relations to support and facilitate directives to state employees relative to disasters. |
| Department of Agriculture, Trade & Consumer Protection | • Provide information to the SEOC relative to operations involving:  
  o Animal diseases  
  o Plant diseases and pest infestations  
  o Land and water conservation issues  
  o Agrichemical releases  
  o Plant, food, milk, and dairy product contamination  
  o Shortages of food supplies  
  o Consumer protection  
  o Animal disaster response |
| Department of Children & Families        | • Provide information to the SEOC relative to operations involving:  
  o Support to populations with access and functional needs.  
  o Mass care.  
  o Human services. |
| Department of Health Services            | • Provide information to the SEOC relative to operations involving:  
  o Support to populations with access and functional needs  
  o Mass care  
  o Human services  
  o Public health laboratory testing  
  o Epidemiological investigation and laboratory services  
  o Isolation and quarantine/environmental health/vector control  
  o Medical surge  
  o Mass prophylaxis and treatment  
  o Medical supplies management and distribution  
  o Fatality management |
| Department of Justice                    | • Provide intelligence to the SEOC relative to:  
  o Cyber attack  
  o Terrorist attack |
### Agency Functions

<table>
<thead>
<tr>
<th>Agency</th>
<th>Functions</th>
</tr>
</thead>
</table>
| Department of Natural Resources | • At the direction of the secretary's office or designee, the department’s central office operations center may be activated to assist in coordinating response activities involving:  
  o Forest fires  
  o Hazardous substances releases  
  o Law enforcement expanded authority requests  
  o Debris removal and disposal  
  o Drinking water protection  
  o Waste water treatment facilities security  
  o Air monitoring  
  o Dam safety  
  o Collection of samples for state laboratories  
  o Monitoring animal diseases  
• Provide information to the SEOC relative to the activities above. |
| Department of Transportation | • Provide intelligence to the SEOC via statewide intelligent transportation system traffic surveillance.  
• Provide information to the SEOC on transportation infrastructure obstruction or damage.  
• Develop and provide to the SEOC priority routing plans for the affected areas. |
| Department of Military Affairs: Wisconsin National Guard | • At the direction of the adjutant general, the joint operations center (JOC):  
  o Controls all WING forces that are or may be activated.  
  o Receives requests for civil support.  
  o Manages information about the situation and status of WING units, and provides data to the SEOC.  
  o Coordinates with U.S. Northern Command, Colorado Springs, CO for reception, staging, and movement of federal military forces, if the incident is of such a magnitude as to require them.  
• Questions or requests for assistance should be directed to the WEM DO at the 24-hour phone number (800)943-0003. |

### I. Introduction

#### I.A. Purpose

The purpose of the Multi-Agency Coordination (MAC) element is to provide a process for on-scene coordination of support to local disaster response and recovery efforts.

#### I.B. Mission

The mission of the MAC is to:

- I.B.1. Provide coordinated support to the local incident commander or EOC.
- I.B.2. Serve as the point of contact and communications link for agency staff in the field.
- I.B.3. Ensure agency and state policies are implemented as practicable.
- I.B.4. Report agency information, including availability and status of capabilities, to the agency representative in the state emergency operations center (SEOC), if elevated, or otherwise to the agency designee.

I.C. Organization

Figure 1: Incident Response Organization with MAC

I.D. Composition

I.D.1. Wisconsin Emergency Management (WEM) is the lead coordinating agency for the Multi-Agency Coordination (MAC) element.
   a) When the MAC is activated WEM will designate a MAC Coordinator.
   b) This may be a Region Director, Response Section Supervisor, or other qualified personnel as applicable.

I.D.2. Each state agency providing support in an emergency response will designate a MAC representative(s)
   a) MAC representative(s) should be appropriate personnel with authority to facilitate and coordinate agency actions and understand their respective department policies relating to emergency preparedness, response, and recovery.
   b) When it is possible members should be subject matter specialists and have existing assignments in the region that is affected by the emergency.
   c) Representatives may be drawn from outside the region as needs dictate.
   d) State and federal agencies with field response capability and authority, will work within the MAC organizational structure for the duration of the incident.

I.D.3. Support agencies will continue to have their own unique structure, authorities, and responsibilities but will operate within the MAC coordinated by WEM which will facilitate field operations.
II. Concept of Operations

II.A. General

II.A.1. The MAC element will be coordinated by the MAC Coordinator. The MAC Coordinator will report to the WEM senior duty officer or SEOC manager and will liaison with the WEM duty officer or SEOC operations section.

II.A.2. The WEM Administrator, SDO, or SEOC manager may activate the MAC to support local response and act as a liaison with the SEOC or the respective state agencies represented on the MAC, or both. State Agencies may also recommend an activation of the MAC based on statutory authorization.

II.A.3. Activation is dependent upon the scope of the event, such as when multiple state agencies are expected to provide support to an emergency response, or when an incident is complex and is anticipated to escalate or last for a long duration.

II.A.4. State agencies may identify several agency representatives to serve on a MAC. MAC representatives could be utilized to provide liaison to the county EOCs, and will report as assigned.

II.A.5. The MAC Coordinator or designee will liaison with the local Incident Command or local EOC command staff, or both. Other representatives will, as necessitated by the event, interface with the appropriate local incident command system (ICS), Incident Management Team (IMT), or local EOC structure to provide support and liaison with the SEOC and state department leadership.

II.A.6. The MAC Coordinator will conduct regular briefings with other members of the MAC to ensure state agency coordination. The MAC Coordinator may hold initial meeting via phone bridge or face-to-face. The MAC Coordinator will conduct periodic meetings after normal IC or EOC operational briefings as well as one or two phone bridge meetings during operational period. Communication between MAC representatives and their respective agency counterparts in the SEOC may be direct.

II.A.7. The MAC Coordinator will ensure timely input on situational awareness and assessments to key response entities.

II.A.8. The MAC should assess local capability or needs, and identify state resources that may support the local response. They should also provide recommendations, guidance, and information to local authorities so they can make informed decisions at the local level.

II.A.9. The MAC will evaluate the need for meeting space, communications, or other resources and will communicate those needs to the SEOC via the MAC Coordinator. Resources such as the WEM mobile communications capability (MCC) or the WINGSAT may be available for MAC use if needed.

II.A.10. Each agency will maintain a staffing plan within their respective agency for immediate deployment and for extended operational periods, until released by the MAC Coordinator.

II.A.11. As the incident transitions to the recovery phase, longer term staffing with appropriate recovery-specific expertise will be considered. MAC operations will assist, transfer, or transition to the Recovery Task Force operations.

II.A.12. When appropriate, MAC representatives will recommend via the MAC Coordinator to the WEM Administrator or designee that the MAC or individual
representatives should demobilize. However, individual agencies may continue to have staff in the field to perform necessary response activities in compliance with their responsibilities. Demobilization will be facilitated by the MAC Coordinator to ensure personnel accountability, and conduct an exit briefing which will include an after action review of their activities and their recommendations for changes to plans and policies.

II.A.13. At any time, the MAC Coordinator may request the SEOC to provide Critical Incident Stress Management support. The MAC Coordinator may request assistance from MAC representatives for assistance for after action report development and other post-incident documentation that may be required.

II.B. Roles and Responsibilities

II.B.1. WEM

a) Serves as the lead coordinating agency for the MAC.
b) Will activate a MAC and designate a MAC Coordinator, when indicated.
c) The WEM SDO or SEOC manager will provide guidance, direction, and support to the designated MAC Coordinator.
d) In consultation with other agencies will determine a training package that is exportable to agency representatives who may serve as part of a MAC (minimum of ICS 300 and SEOC Operations).

II.B.2. Support Agencies

a) Each state agency providing support in an emergency response will designate a MAC representative(s) who should be appropriate personnel with authority to facilitate and coordinate agency actions and understand their respective department policies relating to emergency preparedness, response, and recovery.
b) Each supporting agency will maintain a staffing plan for immediate deployment of MAC representative(s) and for extended operational periods.
c) MAC representatives should available to provide outreach and education on agency capabilities, costs associated with response, and utilize technical assistance in support of local agencies.

II.B.3. MAC Coordinator

a) The MAC Coordinator is responsible for coordinating the MAC under the direction of the WEM SDO or SEOC manager and will liaison with the WEM DO or SEOC operations section.
b) The MAC Coordinator is responsible for addressing the resource needs of the MAC (e.g. meeting space, communications, or other resources).
c) The MAC Coordinator or designee will liaison with the local Incident Command and/or local EOC command staff. Other representatives will, as necessitated by the event, interface with the appropriate local incident command system (ICS), Incident Management Team (IMT), or local EOC structure to provide support and liaison with the SEOC and state department leadership.
d) The MAC Coordinator will conduct regular briefings with other members of the MAC to ensure state agency coordination.
e) The MAC Coordinator will ensure timely input on situational awareness and assessments to key response entities.
f) The MAC Coordinator will facilitate demobilization of the MAC to ensure personnel accountability and conduct an exit briefing.

I. Introduction

I.A. Purpose
To coordinate state and federal activities in support of state, county, tribal, and volunteer efforts to address the non-medical mass care, emergency assistance, housing, and human services needs of individuals, children, and their families impacted by a disaster. When medical needs arise, ESF 6 coordinates with ESF 8.

I.B. Scope
I.B.1. Support may vary depending on:
   a) The magnitude and type of disaster
   b) The phase of the response and recovery efforts
   c) When a presidential declaration of a major disaster has been issued, individual assistance, public assistance, or dedicated disaster assistance may be available in this case.
   d) Whether the disaster has occurred within or outside of Wisconsin.
I.B.2. ESF 6 is divided into four primary functions.
   a) Mass care
      (1) Sheltering
      (a) Temporary congregate care of displaced residents in shelter sites.
      (b) Assessment of overall capacity and capability of shelters to ensure sufficient resources to support both the general population and evacuees with access and functional needs or unique circumstances.
(2) Feeding
   (a) Fixed feeding sites
   (b) Mobile feeding units
   (c) Bulk distribution sites

(3) Distribution of emergency supplies
   (a) Distribution of emergency relief items through fixed feeding sites, mobile
       feeding units, and bulk distribution sites established within the affected
       area.
   (b) May include the use of volunteer organizations for management and
       distribution of bulk goods.

b) Emergency assistance
   (1) Provision of access and functional needs support services in mass care operations,
       including support in the areas of:
       (a) Communication
           Individuals who have limitations that interfere with the receipt of and
           response to information.
       (b) Maintaining health
           Individuals who are not self-sufficient or require medical assistance or
           treatment, special diets, durable medical supplies and equipment, or
           medication.
       (c) Independence
           Individuals who, in order to be independent in daily activities, need support.
       (d) Safety, self-determination, and supervision
           Individuals who require caregivers in order to adequately cope with unusual
           situations and are unable to identify themselves or lack the cognitive ability
           to assess a situation and react appropriately.
       (e) Transportation
           Individuals who cannot drive or who do not have a vehicle and individuals
           who are not ambulatory.

(2) Provision of animal care/handling services for evacuated household pets and
    service animals
    Note: See ESF -11, Attachment 1, Animal Disaster Response Plan
    (a) Coordination of agencies and organizations in supporting local and volunteer
        response and recovery operations for animals affected by a natural or
        technological disaster when local capabilities are overwhelmed.
    (b) Response
        (i) Assessment
        (ii) Search and rescue
        (iii) Collection of stray animals
(iv) Evacuation and shelter (including tracking) of evacuated household pets
(v) Zoo and sanctuary animal issues
(vi) Veterinary medical care and assistance
(vii) Human health risks

(c) Recovery
   (i) Reunification of animals and owners
   (ii) Placement of abandoned animals
   (iii) Disposal of animal carcasses

(3) Support for service delivery sites including Multiagency Resource Centers, Reception Centers, and Family Assistance Centers.

(4) Support for nonconventional shelters
   (a) Hotels, motels, trains, ships, camps, and other single-room facilities.
   (b) Specialized medical support shelters (under the direction of ESF 8).
   (c) Other specialized congregate care areas that may include respite centers, rescue areas, and decontamination processing centers.
   (d) Warming/cooling centers

(5) Support to evacuations including registration and tracking of evacuees.

(6) Coordination of reunification
   (a) Inquiries regarding individuals residing within the affected area.
   (b) Reunification of separated family members using the American Red Cross Safe and Well website, National Emergency Family Registry and Locator System (NEFRLS), or the National Emergency Child Locator Center (NECLC) and the National Center for Missing and Exploited Children (NCMEC).

c) Temporary housing
   As guided by the FEMA National Disaster Housing Strategy.

d) Identification of the various factors that could impact the incident-related temporary housing needs.

   (1) In the absence of a presidential disaster declaration, support in developing a plan of action to provide temporary housing assistance from government and non-government programs, covering the period from when survivors emerge from shelters until they are either permanently re-housed or leave the area.

   (2) In the event of a presidential disaster declaration, support in developing a plan of action to provide temporary housing assistance from government and non-government programs. Federal programs may include:
      (a) Rental assistance
      (b) Temporary housing
      (c) Loans, grants, or both, for the repair, relocation, mitigation, retrofitting, or replacement of primary residences.
e) Human services

(1) Identification and support of people with access and functional needs (see glossary for definition) within the affected area.

(2) Crisis counseling, disaster case management, and other supportive services for those affected by a disaster.

(3) Support of people to acquire government benefits where individual circumstances or program eligibility requirements may have changed due to disaster, including but not limited to:
   (a) Disaster Supplemental Nutrition Assistance Program (DSNAP)
   (b) National School Lunch Program (NSLP)
   (c) School Breakfast Program (SBP)
   (d) Disaster unemployment assistance (DUA)
   (e) State and federal disaster assistance programs

(4) Support acquiring non-governmental assistance (both directly with voluntary organizations and in coordination with the volunteer and donations management functions in ESF 7) including, but not limited to:
   (a) Case management
   (b) Individual financial assistance
   (c) Clean up, home repair, and initial rebuilding
   (d) Temporary housing assistance
   (e) Emergency medications and medical equipment
   (f) Counseling and spiritual care
   (g) Child care
   (h) In-kind donations of disaster recovery supplies
   (i) Disaster legal services

I.C. Policies

I.C.1. WI DHS has the authority to plan for and respond to health disasters under:
   a) Emergency Management, Chapter 323 of the Wisconsin Statutes
   b) Emergency Volunteer Health Care Practitioners, Chapter 257 of the Wisconsin Statutes
   c) Robert T. Stafford Disaster Relief and Emergency Assistance Act (Stafford Act) (42 U.S.C. §§ 5121 et seq.

I.C.2. DCF and all supporting state agencies named in this ESF have the responsibility and authority to plan for and respond to disasters under Chapter 323 of the Wisconsin Statutes.
I.C.3. The American Red Cross is a co-lead for the mass care component of Emergency Support Function (ESF) #6 of the National Response Framework (NRF). In this role, the American Red Cross engages in a variety of activities to support states in their planning, coordinating, and executing of mass care programs and strategies.

   a) The American Red Cross provides disaster cycle services pursuant to its Bylaws and other internal policies and procedures as well as its Congressional Charter (USC 36 §300101-300111). In the Charter, Congress authorized the American Red Cross "to carry out a system of national and international relief in time of peace, and apply that system in mitigating the suffering caused by pestilence, famine, fire, floods, and other great national calamities, and to devise and carry out measures for preventing those calamities."

I.C.4. DWD responsibilities and programs for survivors of disasters are governed by:

   a) The Disaster Unemployment Assistance (DUA) program is established by 42 U.S.C. § 5177.

   b) The U.S. Department of Labor regulations implementing the requirements of the Stafford Act are published in 20 CFR §§ 625.1 – 625.30.

II. Concept of Operations

II.A. General

II.A.1. As lead coordinating agencies, WI DHS, DCF, or the American Red Cross staff ESF 6 during an elevation of the state emergency operations center (SEOC) to Level 4 or higher to:

   a) Maintain and share situational awareness of ongoing ESF 6 operations.

   b) Provide technical support.

   c) Resolve service issues identified by local, county, or tribal responders by bringing in ESF 6 partner agencies that are equipped to provide support.

   d) Coordinate with ESF 8 and appropriate non-governmental organizations in addressing the access and functional needs of individuals, children, and their families during a disaster.

   e) Coordinate with ESF 7 to provide situational awareness of the need for and status of volunteer and donations management operations.

II.A.2. In the rare event that Wisconsin hosts evacuees from another state, this ESF provides for full leadership of mass care, emergency assistance, housing, and human services operations. These roles and responsibilities are clarified in the Wisconsin Mass Care and Recovery Plan for State-to-State Evacuations, an annex to the WERP.

II.B. Mobilization Triggers

II.B.1. Initial awareness of an emergency incident generally originates from one of two sources at the local level:

   a) Members of the public may directly seek support through the WEM duty officer (DO) system or the WI DHS Phone Answering Service. In those circumstances, the caller's information and concerns are referred directly to the appropriate local official (e.g.,
county emergency management director, local public health agency, or tribal health center).

b) Local responders determine there is a need for ESF 6 support. In these circumstances, they notify the local emergency management director who shall notify the following entities, as appropriate:

(1) WEM Duty Officer
(2) County-level human service authority
(3) Local public health agency
(4) Tribal health department
(5) American Red Cross
(6) Salvation Army

II.C. Organization

When mobilized, ESF 6 serves in the human services branch of the operations section of the SEOC organization. However, ESF 6 staff can expect to be called upon to provide support in the planning, logistics, finance, and administration sections as well. Responsibilities for these sections are outlined in ESF 5.

II.C.1. County human services authorities:

a) In coordination with the county emergency management plan and the EOC/incident command system (ICS), retain operational authority of ESF 6-related response and recovery.

b) Lead the shelter operations activities of local and private sector, non-profit, public service, and volunteer organizations in cooperation with the American Red Cross.

II.C.2. State organization

a) The WI DHS 24/7 human services on-call team:

(1) Provides support, technical assistance, and coordination assistance to the local, tribal, and regional emergency human services response.

(2) Serves as advisor and consultant to the incident commander, the local/county/tribal EOC, public health, tribal health, and hospitals on matters related to the psychosocial needs and reactions of emergency response teams, survivors, family members, other people with access or functional needs, and the community.

(3) Alerts supporting state agencies, as needed.

(4) Alerts WI VOAD when SEOC elevation to Level 3 or higher has occurred; WI VOAD, in consultation with WI DHS and DCF response personnel, notifies additional WI VOAD member organizations, as needed.

(5) Initiates the activation of a Functional Assessment Service Team (FAST) to conduct assessments of people displaced from their homes and facilitate access to resources, such as:

(a) Durable medical equipment or supplies

(b) Prescribed medications
(c) Communications assistance
(d) Transportation
(e) Assistance with essential activities of daily living

(6) **Initiates the formation of a needs assessment team in the early stages of the response to:**

(a) Anticipate, project, categorize, and quantify response and recovery needs of survivors.

(b) Coordinate with ESF 7 in developing and maintaining situational awareness of the need for, and status of, volunteer and donations management operations.

(c) Coordinate with ESF 14 to identify and address unmet needs.

b) Department of Children and Families (DCF) directs state human services efforts in support of local, county, and tribal government in meeting the needs of children and families during and after a disaster and support post-disaster administration of DCF programs.

c) WI DHS and DCF assist county, local, and tribal staff in the coordination of emergency human services to obtain available emergency state and federal aid.

d) WEM coordinates with FEMA Region V (ESF 6 and Individual Assistance staff) on appropriate staffing of the FEMA Disaster Recovery Center (DRC) following a presidential disaster declaration.

II.C.3. Federal support organization

a) When an emergency has warranted a presidential declaration, federal assets and programs become available. These are described in IV. B., National Response Framework ESF 6.

b) The state designates an official(s) to coordinate with federal mass care, emergency assistance, housing, and human services assistance.

(1) *This official(s) serves as the principal point(s) of contact with the Regional Response Coordination Center ESF 6 branch.*

(2) *This official(s) is responsible for keeping WEM fully apprised of federal ESF 6 activities.*

II.C.4. Nongovernmental Organizations

a) American Red Cross

The American Red Cross state disaster officer or disaster relief operation director assigns a liaison to the SEOC to coordinate ESF 6-related activities within the state, to include:

(1) *Establishing and operating American Red Cross mass care sites and feeding (mobile and fixed) for disaster survivors.*

(2) *Use of the National Shelter System for providing information about shelters open, on stand-by, and closed, with detail on population and capacity.*

(3) *Coordinating the recruitment and assignment of American Red Cross personnel for mass care operations.*
(4) Coordinate American Red Cross mass care services with government, non-profit, and community partners.

b) Salvation Army

The Salvation Army Disaster Services Director for Wisconsin will assign a liaison to the SEOC to coordinate the organization’s activities within the state to include:

1) **Coordinating SA mass care services with the other agencies including feeding (mobile and fixed), as well as emotional and spiritual care for disaster survivors, emergency workers and volunteers.**

2) **Provide support services to Adventist Community Services in the event that a warehouse is established.**

c) Adventist Community Services

The Adventist Community Services Director for Wisconsin will upon request from the SEOC:

1) **Per the MOU between the Wisconsin DMA/WEM and the ACS:**
   a) Establish and operate a warehouse for receiving in-kind donations.
   b) Coordinate a process for the distribution of the in-kind donations.

d) WIVOAD

The Chairperson of the Wisconsin Voluntary Organizations Active in Disaster will assign a liaison to the SEOC to:

1) **Coordinate the activities of the WI VOAD member organizations during the initial response.**

2) **Provide support and guidance for the long term recovery process.**

**II.D. Levels of Mass Care Support**

The state’s role in ESF 6 varies depending on the magnitude of the impact and the origin of the affected individuals.

II.D.1. Wisconsin as an impacted state

a) Single-county response

1) **County shelter plans provide for meeting the functional needs of residents in general populations shelters.**

2) **County plans quantify the number of evacuees the jurisdiction can reasonably shelter using their own resources for the first 72 hours of an evacuation.**

b) Multi-county response

County mutual aid agreements with neighboring counties may provide for sheltering their evacuees in the event that:

1) **The number of the impacted county’s evacuees exceeds the county’s shelter capacity.**

2) **The county’s infrastructure is damaged to the extent that its shelters are not useable.**
(3) The county’s pre-identified shelters are too vulnerable to a hazardous situation to be activated.

c) Regional support

ESF 6 activates support systems at the regional level and in the SEOC to provide:

1. Incident management teams (IMTs)
2. Logistics support
3. Functional Assessment Service Teams (FASTs)
4. Voluntary organizational support
5. Public information support

II.D.2. Wisconsin as a host state

In the event a disaster outside of Wisconsin prompts a direct request for Wisconsin to host evacuees from another state, the following standards apply:

a) The request must be made to WEM by FEMA in the context of a presidential declaration or by the impacted state through the Emergency Management Assistance Compact (EMAC).

b) The governor must issue an executive order directing the State of Wisconsin to operate state-managed mass care.

c) State costs must be reimbursable by FEMA.

d) WI DHS, DCF, and the American Red Cross take the lead on all aspects of the operation.

1. Operations are conducted in accordance with the Wisconsin Mass Care and Recovery Plan for State-to-State Evacuations, which is an Annex of this document.

2. WI DHS, DCF, American Red Cross, and WEM will identify those counties that are willing to partner to accept evacuees from another state, identifying the number of evacuees each county would have the capacity to house.

3. WI DHS, DCF, and WEM will develop MOUs with willing host county agencies that delineate county agencies’ and voluntary organizations’ roles in mass care operations.

4. Counties that do not host out-of-state evacuees should be prepared, on a regional basis, to support host counties.

II.D.3. Mega-shelters in Wisconsin

a) Mega-shelters are defined as those equipped to house 2,000 or more evacuees.

b) The use of mega-shelters in Wisconsin is a strategy of last resort.

c) The Wisconsin Mass Care and Recovery Plan for State-to-State Evacuations provides a system by which unusually large numbers of evacuees can be more responsibly and humanely served in a number of smaller shelters distributed among counties and organizations that have volunteered to care for them.
II.E. ESF Activities

The WERP Basic Plan defines standardized tasks that constitute the prevention, protection, mitigation, response, and recovery responsibilities of any agency that serves a role in emergency management. This section defines those activities that are unique to ESF 6, and is intended to be used in conjunction with the common tasks outlined in the WERP Basic Plan.

III. Agency Responsibilities

III.A. Lead Coordinating Agencies – Department of Health Services/Department of Children & Families/American Red Cross

Table 5: Lead Coordinating Agencies Functions

<table>
<thead>
<tr>
<th>Agency</th>
<th>Functions</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Joint Responsibilities:</strong></td>
<td>Agencies as a whole General</td>
</tr>
<tr>
<td>Wisconsin Department of Health Services</td>
<td>• Provide overall leadership, coordination, assessment, and technical assistance in response to disasters relative to all ESF 6 functions.</td>
</tr>
<tr>
<td>Department of Children &amp; Families</td>
<td>• Coordinate with local, county, tribal, and state government and with ESF 6 support agencies to identify and address the public’s unmet needs during and immediately following a disaster.</td>
</tr>
<tr>
<td>American Red Cross</td>
<td>• Provide to WEM DO system a 24/7 on-call schedule or point of contact relative to each agency to respond to incidents when notified.</td>
</tr>
<tr>
<td><strong>Mass Care</strong></td>
<td>• Coordinate with ESF 8 to support local, county, and tribal human services in meeting the medical needs of affected populations.</td>
</tr>
<tr>
<td></td>
<td>• Coordinate the identification and assessment of the need for food distribution services on a two-phase basis:</td>
</tr>
<tr>
<td></td>
<td>o Critical emergency needs immediately after the disaster.</td>
</tr>
<tr>
<td></td>
<td>o Longer term sustained needs after the emergency is over.</td>
</tr>
<tr>
<td></td>
<td>• Maintain situational awareness of voluntary organizations’ response activities and take measures to avoid duplication of efforts or unmet needs.</td>
</tr>
<tr>
<td><strong>Emergency Assistance</strong></td>
<td>• Assist local, county, and tribal human service agencies in planning for and acquiring sufficient personnel, supplies, equipment, and other resources for ESF 6 operations, including, but not limited to:</td>
</tr>
<tr>
<td></td>
<td>o Resources for the general public</td>
</tr>
<tr>
<td></td>
<td>o Resources for people with access and functional needs</td>

|                                | • Coordinate and implement human service assistance programs from governmental and non-governmental sources following a state disaster and/or federal disaster declaration.  
• Facilitate and coordinate state, local, county, and tribal efforts to provide emotional support to residents and emergency workers, if needed.                                                                                                                                                                                                                                                                                                                                                       |
| Department of Health Services  | Agency as a whole  
• Direct state human services efforts in support of local, county, and tribal government.  
• Support public health inspections of affected housing prior to re-entry.  
• Coordinate the application for and provision of crisis counseling or disaster case management, if available.  
• Coordinate the Functional Assessment Service Team (FAST) initiative.  
  o Advocate and provide statewide training for the creation of FASTs.  
  o Manage the certification of FAST members.  
  o Maintain, manage, and deploy state and regional FASTs.                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| Department of Children & Families | Agency as a whole  
• Direct state human services efforts in support of local, county, and tribal government in meeting the needs of children and families during a disaster, including:  
  o Coordinate emergency child care.  
  o Coordinate and support child reunification with family/caregivers.  
  o Refer unaccompanied minors to local child welfare agencies.  
  o Ensure that the needs of refugees are addressed.  
• Support post-disaster administration of DCF programs including, but not limited to:  
  o The Wisconsin Works (W-2) program  
  o Wisconsin Shares (child care subsidies)  
  o Support to county child support agencies  
  o Other related DCF programs                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| American Red Cross             | Organization as a whole  
• Provide mass care services such as sheltering, feeding, distribution of relief supplies, family reunification.  
• Provide health services to survivors supporting the replacement of medications and medical equipment.  
• Provide mental health and psychological first aid support to survivors, first responders, and disaster workforce.  
• Utilize the National Shelter System to track shelter data including shelter locations and population counts and share shelter data with partners.  
• Staff local and state EOCs.  
• Complete damage assessment on residential properties.  
• Provide recovery casework and direct financial assistance.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
### III.B. Wisconsin Governmental Support Agencies

#### Table 6: State Government Support Agencies Functions

<table>
<thead>
<tr>
<th>Agency</th>
<th>Functions</th>
</tr>
</thead>
</table>
| **Department of Administration** | **Agency as a whole**  
• Coordinate with federal agencies to assess housing needs of vulnerable displaced residents.  
• Administer Community Development Block Grants (CDBG) to communities to support housing reconstruction. |
| **Department of Agriculture, Trade and Consumer Protection**  
**Division of Animal Health**  
**State Veterinarian's Office** |  
• Ensure the availability of resources for the disaster.  
• Maintain a database of animal shelters and animal control facilities required to be licensed under Wis. Admin. Rule ATCP 16.  
• Maintain a database of humane officers certified under Wis. Admin. Rule ATCP 15 and appointed by local jurisdictions.  
• Coordinate and provide information on the availability of resources from other states, the federal government, and non-governmental organizations.  
• Assist local disaster coordination with training and preparation of animal disaster responders. |
| **Department of Public Instruction** | **Agency as a whole**  
• Coordinate with the American Red Cross to release USDA Foods in a presidentially declared disaster:  
  o For congregate feeding, release USDA Foods as long as available and needed.  
  o For household feeding, release USDA Foods only with prior approval from the USDA and per extent and length of time as determined by the USDA.  
• Coordinate with the American Red Cross for release of USDA Foods in the absence of a presidential declaration, but when ESF 6 determines circumstances warrant USDA Foods distribution (defined in accordance with 7 CFR 250.7 as *Situations of Distress*):  
  o For congregate feeding during a Situation of Distress involving a natural disaster, release USDA Foods to the extent that USDA Foods and funds for replacement are available. Release of USDA Foods to be a maximum of 30 days.  
  o For congregate feeding during a Situation of Distress involving a non-natural disaster, release USDA Foods to the extent that USDA Foods and funds for replacement are available, with prior approval from USDA, and per extent and length of time as determined by USDA.  
  o For household feeding during a Situation of Distress, release USDA Foods only with prior approval from USDA and per extent and length of time as determined by USDA. |
| **Department of Safety & Professional Services** | **Agency as a whole**  
• Assist in structural inspections of disaster-damaged buildings, when needed. |
### III.C. Non-Governmental Support Organizations

---

**Agency** | **Functions**
---|---
Department of Workforce Development | **Agency as a whole**  
- Provide, through Job Service Centers and county and tribal partners, information and contacts for the following programs:  
  - Worker’s compensation  
  - Unemployment insurance  
  - Anti-discrimination enforcement  
  - Vocational rehabilitation for people with disabilities  
  - Employment and training services  
- Administer the DUA program through the Unemployment Insurance (UI) Division following a presidential disaster declaration that includes individual assistance.

Department of Military Affairs | **Wisconsin Emergency Management**  
- Coordinate state voluntary agency activities through support of WI VOAD activities.  
- Coordinate and implement human service assistance programs available following a state or presidential disaster declaration.  
- Support emergency human services assistance programs (e.g., congregate care, food coupons, commodities, and monetary assistance) available from governmental and non-governmental sources.  
- Coordinate with federal, state, tribal, and local entities to identify and disseminate information on available, affordable housing and housing programs.

Wisconsin Housing & Economic Development Authority | **Agency as a whole**  
- Provide funding support for shelter operations under specialized circumstances.  
- Coordinate with the DOA and federal agencies to review multifamily and elderly affordable housing stock in the state to assess:  
  - Damage to housing units  
  - Potential displacement of vulnerable residents  
  - Administer home buying and home improvement programs, as appropriate for disaster survivors.

Department of Military Affairs | **Wisconsin National Guard**  
Upon a state declaration of emergency and validated request from state, county, local, or tribal agency provide:  
- Support to evacuation, reception center, and mass care operations  
  - Use of WING armories for shelter  
  - Transportation support with buses or heavy trucks  
- Support to supply and commodity distribution  
- Limited power generation and communications support

I.C. Coordination

While there is no prohibition against emergency management directors contacting member organizations directly, Wisconsin Voluntary Organizations Active in Disaster (WI VOAD) encourages emergency managers to work with a single VOAD coordinator (either the state or a local VOAD chairperson) to reduce duplication of efforts and/or resource gaps.

Intentionally left blank
I. Introduction

I.A. Purpose

This ESF provides insight and guidance for state agencies in the management of resources to support incidents and events in Wisconsin. ESF 7 has a twofold mission to provide:

I.A.1. Resource support for counties, tribes, and local units of government.

I.B. Scope

I.B.1. ESF 7 describes how state agencies coordinate and manage resources to provide logistical support for the State Emergency Operations Center (SEOC) and, as requested, for incident commanders at the municipal, county, and tribal level as well as non-governmental organizations (NGOs).

I.B.2. Within ESF 7, the term “resources” refers to personnel, equipment, supplies, and services any or all of which may be required in a response to or recovery from an incident.

I.B.3. The logistics management function of ESF 7 provides a planning, management, and sustainment capability to request, house, deploy, support, and demobilize equipment, supplies, and personnel.

I.B.4. The resource support function of ESF 7 provides equipment, supplies, and services to the SEOC and, on request, to counties, tribes, local units of government, and incident...
managers and responders through the incident command system (ICS) logistics function.

I.C. Policies

I.C.1. Coordination of firefighting and rescue resources are managed through ESF 4 and ESF 9.
I.C.2. Lead and coordinating ESF 6 entities manage necessary mass care and housing resource requirements.
I.C.3. The logistics management and resource support functions of ESF 7 are managed through the logistics section of the Incident Command System (ICS).
I.C.4. Lead and coordinating ESF 8 entities manage necessary medical resource requirements.
I.C.5. WEM is the state resource and logistics coordination center.
   a) When WEM is at “steady state,” Level 5, the WEM Duty Officer (DO) and Senior Duty Officer (SDO) perform resource coordination functions.
   b) When WEM is at Level 4 or higher, the SEOC performs resource coordination functions.
I.C.6. As appropriate, WEM coordinates in-state resource requests through:
   a) Owning state agencies
   b) Owning non-governmental organizations
   c) Established in-state mutual aid agreements
   d) The Wisconsin National Guard (WING)
I.C.7. WEM coordinates interstate resource requests through:
   a) The Supplemental Interstate Agreement for Emergency Mutual Assistance between the State of Wisconsin and the State of Minnesota
   b) The Emergency Mutual Aid Compact (EMAC)
   c) FEMA Region V
   d) State and Province Emergency Management Assistance Memorandum of Understanding.
I.C.8. WebEOC contains a Resource Request and Deployment Module (RRDM) to inventory, deploy, track, and demobilize resources.

II. Concept of Operations

II.A. Mobilization Triggers

WEM activates ESF 7 whenever:

II.A.1. County, tribal, local units of government or NGO partners request state level resource support because local and locally available resources are exhausted or are likely to be exhausted.
II.A.2. Either logistics management or resource support operations are required because of an incident where WEM is at Level 2 or higher.

II.B. Organization

II.B.1. SEOC Logistics Section

When at Level 2, the SEOC manager may staff a Logistics Section. When staffed, the Logistics Section Chief is responsible for ESF 7.

a) The Logistics Section Chief:

(1) Organizes the Logistics Section staff.
(2) Briefs the Logistics Section staff and assigns tasks.
(3) Participates in preparation of the Incident Action Plan (IAP).
(4) Reviews required resources against available resources and identifies resource gaps.
(5) Ensures coordination between the Logistics Section and the command and general staff.

b) As required by the incident, the Logistics Section Chief may activate one or more of the following positions:

(1) A Communications Unit that:
(a) Assesses the need for and provides communications assets between the SEOC, the affected county(ies), tribes, and state agency staff operating in the field.

(b) Prepares and implements the Incident Communications Plan (ICS 205).
(c) As necessary, activate and serve as a liaison with WI ARES/RACES.
(d) Determine the need for and procure additional communications assets.
(e) Provide technical information to the command and general staff.

(2) A Food Unit that:
(a) Determines food service requirements for SEOC and deployed staff.
(b) Ensures that sufficient potable water and beverages are available.
(c) As necessary, coordinates transportation of food and beverages.
(d) Supervises food service contracts and agreements.
(e) Provides purchase documentation to the Finance Section.

(3) A Ground Support Unit that:
(a) Assesses the ground transportation requirements. Vehicles for transporting people and goods are available from DOA, WING, private sector bus and truck company partners, and rental agencies.
(b) Supports deployed vehicles with fuel, routine servicing, and maintenance.

(4) A Facilities Unit which:
(a) Assesses the need for and provides facilities needs for deployed resources.
(b) Coordinates office, lodging, and storage space rental agreements.
(c) Provides purchase and rental documentation to the Finance Section.

(5) A Supply Unit that:
(a) Assesses the need for and determines the type and amount of supplies and equipment required.
(b) Coordinates with the Finance Section for purchasing authorities and restrictions.
(c) Arranges receipt of supplies and equipment ordered.
(d) Coordinates with the Facilities Unit for appropriate supply storage.
(e) Develops and implements safety and security needs for storage facilities.
(f) Maintains an inventory of supplies and equipment deployed to the incident.
(g) Re-services demobilized equipment and arranges for return to owning agencies.

II.B.2. Logistics Management

The logistics management function provides a comprehensive logistics planning management and sustainment capability harnessing governmental and NGO partners.
a) Logistics management supports:

   (1) The SEOC, WEM field operations, and state agencies.

   (2) County, tribal, local units of government, and NGO partners, when requested.

b) Logistics management manages a supply chain process including supply:

   (1) Procurement

   (2) Transportation

   (3) Distribution

   (4) Accountability

c) The logistics management functions include:

   (1) Identification of resource-related requirements including:

      (a) Analyzing historical incident reports to identify commonly required resources.

      (b) Suppliers of critical material including donated goods and services.

         (i) A donations management plan is attached to this ESF.

      (c) Coordination with DOA to identify existing state contracts and other funding sources to pay for logistics management services.

      (d) Procedures for emergency purchases of mission-essential supplies and services.

      (e) Procedures for managing spontaneous volunteers.

         (i) A volunteer management plan is attached to this ESF.

      (f) Transportation resources to move supplies to temporary storage and to deployment locations.

      (g) Securing warehousing as intermediate staging areas for supplies between procurement and deployment.

      (h) Managing supply deployment plans to ensure prompt and efficient delivery of supplies in an emergency, particularly during the surge phase as an incident unfolds and escalates.

      (i) Managing demobilization plans to ensure that logistics management assets activated in support of an incident are returned to their pre-emergency state in an organized fashion.

   (2) Resource support to the SEOC and, as requested, state agency operations in the field and in support of responders through the incident command system including:

      (a) Coordination with the resource support function to activate supply deployment plans to acquire necessary transportation, staging areas for intermediate storage, and distribution of needed supplies.

      (b) Locating available stores of state-owned supplies, supply vendors, and donated supplies where state-owned stocks are not available.
Resource Support

(c) Coordination for transportation of necessary supplies from vendors or storage areas to intermediate staging areas and/or final distribution sites.

(3) On-going resource support in the response phase, then demobilization of transportation assets and intermediate staging areas as the incident de-escalates toward normal conditions.

II.B.3. Resource Support

The resource support function provides supplies, services, and other necessities during emergencies and supported events.

a) Resource support supplies meals, transportation resources, administrative and operations space, lodging, IT support, communications support, and other supplies and services to support:

(1) The SEOC, WEM field operations, and state agencies.
(2) County, tribal, local, and NGO partners, when requested.

b) Resource support manages the procurement and delivery of mission-essential supplies during the initial surge as an incident matures and sustains delivery until incident resources are demobilized. The resource support function, in coordination with the Finance Section Chief:

(1) Leverages state contracts
   (a) During a declared state of emergency, the governor may prioritize emergency management contracts over other state contracts.

(2) Purchases mission-essential supplies not otherwise available in a timely manner.
   (b) The SEOC Logistics Section coordinates with the WEM Finance Office and DOA for purchasing guidance.

c) The resource support function operates primarily during the response and early recovery phases of an incident.

(1) Resource support:
   (a) Executes logistics management plans for pick-up, transportation, and delivery of mission-critical supplies to points of distribution for end-users.
   (b) Executes logistics management plans for transportation of personnel to deployed locations, eating and lodging facilities while deployed, and return to home station when demobilized.
   (i) Resource support coordinates with ESF 13 for:
      (a) Access to incident perimeter entry control points.
      (b) Waivers to rules governing weight limitations, operating hours, and other regulations.
   (c) Provides for communications services, administrative space, and other services for deployed resources.
II.B.4. WebEOC Resource Request and Deployment Module (RRDM)

WEM uses WebEOC RRDM to inventory, deploy, track, and demobilize resources. County, local, tribal, and state agencies participating in WebEOC may use RRDM to:

a) Share information on deployable resources
b) Maintain situational awareness on the status of resources

II.B.5. Emergency Management Assistance Compact (EMAC) and the State and Province Emergency Management Assistance Memorandum of Agreement (NEMAC).

EMAC is the congressionally-recognized national mutual aid system comprised of all 50 states, the District of Columbia, and US possessions. EMAC offers assistance during governor-declared states of emergency through a responsive system that allows states to send personnel, equipment, and commodities to help disaster relief efforts in another state. NEMAC is a congressional and state authorized international mutual aid system between specific Canadian Provinces and specific states.

a) WEM interfaces with EMAC through:

(1) **EMAC coordinator**

The EMAC coordinator manages the EMAC program in Wisconsin. He or she arranges training for EMAC authorizing representatives, designated contacts, and EMAC A-Team members. He or she also ensures that Wisconsin’s EMAC program complies with national EMAC standards and agreements.

(2) **EMAC authorizing representative(s)**

Authorizing representatives must approve, by their signature, all EMAC requests. Authorizing representatives have access to a secure EMAC website through which they may enter EMAC requests and respond to EMAC requests from other entities.

(3) **EMAC designated contact(s)**

Designated contacts have access to the secure EMAC website and can enter EMAC requests once approved by an authorizing representative. Designated contacts cannot authorize an EMAC request.

(4) **EMAC A-Team members**

EMAC A-Team members (at least two) are deployable state assets who, when deployed, assist the receiving entity with EMAC requests and managing EMAC requested assets.

b) The SEOC Logistics Section, when activated, manages requests through EMAC. EMAC requests are handled by the WEM DO and SDO when at “steady state” Level 5.

II.C. ESF Activities

The WERP Basic Plan defines standardized tasks that constitute the prevention, protection, mitigation, response, and recovery responsibilities of any agency that serves a role in emergency management. This section defines those activities that are unique to this ESF, and is intended to be used in conjunction with the common tasks outlined in the Basic Plan.

Intentionally left blank
I. Introduction

I.A. Purpose
To outline a framework and process for supporting local jurisdictions in the effective coordination and distribution of donated goods and/or monetary donations that have not been previously designated to a specific agency when major disasters overwhelm local capabilities.

I.B. Scope

I.B.1. In general, any reference to donated goods or monetary donations in this plan refers to resources that donors (public and/or private sector) have not designated to a specific agency.

I.B.2. This attachment applies to those donations received for distribution directly to disaster survivors, and is not applicable to the delivery of goods to support the efforts of response workers.

I.B.3. This attachment does not supersede the plans, policies, or procedures of voluntary organizations, nor does it affect offers of donations assistance directed to specific voluntary agencies.

I.B.4. WI VOAD agencies engaged in disaster response and recovery may co-locate office and warehouse space with the ACS at no cost, as is practicable.

I.C. Policies

I.C.1. Donated goods
a) The transportation of goods from donors to receiving organizations is the responsibility of the donor.

b) If a jurisdiction requests donated goods from public and private sectors, WEM may advise donors that the jurisdiction will accept only pre-sorted, clearly labeled, palletized, and shrink-wrapped donations with a predetermined transportation method and a pre-established need.

c) In the event of a catastrophic disaster that prompts a large influx of unsolicited donations, WEM may establish checkpoints to control the flow of goods into the response and recovery area.

d) The state donations management system may redirect unsolicited, undesignated donations that are unsuitable for use by any relief organization.

e) In the event donated goods remain at the time of warehouse closure, warehouse managers will make every effort to honor the intent of the donors by offering them to local non-governmental organizations (NGOs).

I.C.2. Monetary donations

a) All donations-related messaging will advise donors to send monetary donations to existing established and properly vetted voluntary organizations.

b) This plan will support jurisdictions that choose to establish local disaster funds provided they:

   (1) Designate an established and properly vetted 501(c) (3) organization as fiscal agent for the fund, AND

   (2) Convene a local VOAD, long-term recovery committee, unmet needs committee, or similarly structured formalized group to:

       (a) Establish guidelines and a distribution plan.

       (b) Create a case management system through which to process distribution.

       (c) Develop a timeline for fund distribution with a concrete plan for final distribution and closure of the fund.

II. Concept of Operations

II.A. General

When activated during disaster response and recovery, this attachment prompts the mobilization of a donations coordination team (DCT) to:

   II.A.1. Assess the needs of local jurisdictions requiring support in managing donations from the public and the private sector.

   II.A.2. Develop plans for meeting local donations management support needs.

   II.A.3. Locate and dispatch resources to support local donations management.

   II.A.4. Determine whether there will be a need for federal donations management support.
II.B. Mobilization

II.B.1. When one or more of the following triggers occur, the state emergency operations center (SEOC) manager directs the WEM Voluntary Agency Liaison (VAL) to activate the Wisconsin Donations Management Plan.

a) SEOC staff anticipates the potential of large volumes of unsolicited donations because:

(1) People have evacuated from their homes.
(2) There is significant media coverage of the incident.
(3) There are inquiries from the public seeking information on how to help.
(4) There are donation offers coming from the public and/or private sector.
   (a) There is evidence of community groups collecting donations.
   (b) Donations are being ‘dumped’ at random locations (e.g. fire stations, nonprofits, police stations, churches).
(5) Needs assessment forecasts a significant likelihood that there will be needs best met by solicited donations.

b) A local emergency management agency has requested support.

c) A member of the DCT recommends that the team convene.

II.B.2. The VAL, in coordination with the WI ACS Director (or designee), facilitates a meeting/conference call of the DCT to determine if there is a need for activation of state donations management resources.

II.C. Organization

II.C.1. DCT composition

a) WEM
b) Adventist Community Services
c) 2-1-1 Wisconsin
d) ARC
e) ESF 15 representative
f) SA
g) WI DHS
h) WI VOAD
i) Local long-term recovery committee representative
j) Other members as needed
II.C.2. Donations and Volunteer Management

**Figure 1: Donations and Volunteer Organizational Chart**

II.D. Donations Management System Components

II.D.1. Donations coordination team

a) Assesses the needs of the local donations management operation and provides scaled levels of assistance

b) Coordinates closely with outreach workers in the disaster area to identify potential and actual unmet needs

c) Provides a list of organizations accepting donations to the Public Information Officer (PIO).

d) Develops a strategy for disposing of unneeded received donations
e) Standardizes and facilitates the delivery of all messaging related to donations management operations

f) Coordinates through the WEM regional directors and in conjunction with local officials to establish a location to receive and manage donated goods

g) Coordinates with other disaster relief organizations to identify potential and actual unmet needs to avoid duplication of benefits

h) Convenes in support of local donations management operations, as needed

II.D.2. Wisconsin Disaster Information Assistance Line (WI DIAL) – a WEM-operated call center that can be activated for multiple purposes

a) Directs callers to the ReadyWisconsin homepage, which provides specific instructions for all types of donations

b) Discourages offers of items that are not needed

c) If WI DIAL is not activated, Wisconsin 2-1-1 may be able to provide assistance with information dissemination regarding donations.

II.D.3. Control checkpoints

a) Physically inspect donations shipments to ensure that:

   (1) Goods are actually needed in the relief/recovery effort

   (2) Goods are in usable condition

b) Direct shipments to designated warehouses/staging areas

c) Redirect shipments of unneeded or unusable goods as directed by the DCT

II.D.4. Regional warehouses

a) Receive, unload, sort, inventory, and package (as needed) donated goods

b) Deploy donations to designated distribution centers

II.D.5. Distribution centers

a) Receive, sort, inventory, and package (as needed) donated goods

b) Distribute goods to relief agencies

II.D.6. May distribute goods directly to individuals and families

a) Provide support and services to the local incident command system (ICS) structure

b) Initiate donations management operations in the event there is a delay in the activation/arrival of dedicated donations management organizations and personnel

II.D.7. Wisconsin Recovery Task Force (WRTF) – Human Services Committee

a) Initiates early and ongoing needs assessment and maintains exchange of such information with the DCT

b) Provides guidance and support to local long-term recovery task forces in developing equitable systems (case management) for distribution of donated goods and funds

II.D.8. WI VOAD Long-Term Recovery Committee
a) Provides guidance and support to counties/tribes in managed distribution of donated resources

b) Coordinates with the WI VOAD treasurer to monitor status of funds for which WI VOAD serves as fiscal agent

II.E. ESF Activities

The WERP Basic Plan defines standardized tasks that constitute the prevention, protection, mitigation, response, and recovery responsibilities of any agency that serves a role in emergency management. This section defines those activities that are unique to ESF 7, and is intended to be used in conjunction with the common tasks outlined in the Basic Plan.

</table>
| Response       | **Public Information**  
• Provide support with immediate public messaging:  
  o To emphasize with the public that monetary contributions are the best way to assist in disaster response and recovery  
  o To provide a list of organizations accepting donations  
• Coordinate immediately with the DMA webmaster to create a landing page on ReadyWisconsin to provide directions to prospective donors.  
• Provide support in making impacted residents aware of donations facilities, hours of operation, and the process for receiving goods. | WEM             |
| Activities     | **Needs Assessment**  
• Provide support and guidance in early and ongoing assessment of housing and human services needs to drive decision-making and strategically anticipate the appropriate scale of donations management operations.  
• Based on the evident primary impacts of the disaster and in consultation with response partners, project the most probable areas of need.  
• Facilitate the integration of early phase needs assessment with the long-term recovery committee. | WEM, WI VOAD, DCT |
|                | **Monetary Fund Management**  
• If the jurisdiction elects to accept monetary donations directly, provide support and guidance in identifying an appropriate fiscal agent and system for receiving funds.  
• Provide support and guidance in developing policies and processes to collect and consolidate, account for, distribute, and record all monetary donations. | WEM, WI VOAD, DCT |
### Phase

#### Action Item

**Donated Goods Management**
- Assist localities in finding and deploying IMTs to manage donations warehousing and distribution operations.
- Ensure localities are tracking volunteer hours and donated resources for potential credit under FEMA Disaster Assistance Policy 9525.2 (attached) in the event of a presidential declaration.
- Assist localities in acquiring facilities and logistical support for donations management operations, including identification of warehouses that have refrigeration capacity.
- Provide support in establishing administrative procedures for soliciting, storing, registering/inventorying, transporting, distributing, and accounting for donated goods.
- Provide support for inspection of donated food items.
- Maintain contact with food banks to determine space availability for collection and storage of food items.
- Provide support for distributing unneeded or leftover donated goods.
- In multi-jurisdictional donations management operations:
  - Initiate state standard operating procedures (SOPs) (to be determined) as needed for:
    - Control checkpoints
    - Regional warehouses
  - Facilitate coordination among locally run warehouses and distribution centers.

**Information and Referral**
- Facilitate the mobilization of an existing referral organization such as Wisconsin 2-1-1 to refer or process donations-related inquiries.
- Mobilize the Wisconsin Disaster Information Assistance Line (WI-DIAL), as needed.
- Keep all information and referral organizations, including local human services organizations, provided with the most up-to-date information.

### Agency Responsibilities

#### III. Agency Responsibilities

##### III.A. Primary Agency – Wisconsin Emergency Management

<table>
<thead>
<tr>
<th>Agency</th>
<th>Functions</th>
</tr>
</thead>
</table>
| **Wisconsin Emergency Management** | **Donations Coordinator**  
The WEM VAL will fulfill the volunteer and donations coordinator responsibilities.  
- Chair the DCT.  
- Represent the team in all SEOC coordination activities.  
  - Communicate needs identified in the SEOC to the DCT for procurement.  
  - Communicate policy decisions to the DCT.  
- Coordinate with ESF 15 regarding media releases about unsolicited goods and services.  
- Assist state and local officials in identifying needed and unneeded donations. |
**Wisconsin Emergency Response Plan**

**Donations Management**

<table>
<thead>
<tr>
<th>Agency</th>
<th>Functions</th>
</tr>
</thead>
</table>
|        | • Serve as liaison to other affected local governments and to other state agencies in matters related to donations management.  
• As necessary, coordinate with the SEOC manager and the operations section to identify and mobilize state agency staff to provide supplemental support to local and voluntary organization efforts to manage and operate donations management facilities.  
• Coordinate with WI DIAL and 2-1-1 Wisconsin, as applicable, to provide them with the most current information for the public.  
• Communicate and coordinate with the FEMA donations coordinator.  
• Participate in all coordination meetings with FEMA VALs.  
• Consider requesting FEMA, Corporation for National and Community Service (CNCS), or Emergency Management Assistance Compact (EMAC) assistance if DCT demands become unmanageable with available staff. |
|        | |

**Public Information Officer**

<table>

CASH DONATIONS FOR DISASTER SURVIVORS BEST WAY TO HELP
Sample County, WI – The recent [insert name of incident] in [insert location] has many people around Wisconsin and the nation asking... how can I help? The best thing you can do is to make a cash donation instead of sending donated goods, according to [insert name of official].

“Cash donations to voluntary disaster relief organizations allow them to buy exactly what is most needed to assist disaster survivors,” said [insert name of official].

[Insert name of official] explained that the needs of the disaster survivors would change considerably from the early stages of the disaster into the weeks and months of disaster recovery. Cash donations allow disaster aid to focus on the areas of greatest need while avoiding surpluses of unneeded items.

For more information on how to support the disaster relief effort in [insert location] go to www.ready.wi.gov or call [insert information and referral phone bank number].

CASH IS BEST

Due to the recent [insert name of incident], the [insert name of jurisdiction/organization] is coordinating disaster relief efforts in [insert location]. At this time, the most pressing need is cash donations to help participating disaster relief organizations buy supplies of the items most urgently needed. If you would like to make a cash contribution, please go to www.ready.wi.gov or call [insert information and referral phone bank number].
V.D. Disaster Donations Public Service Announcement (:30)

DISASTER DONATIONS
In the wake of [insert name of incident] many people want to know how they can help. [Insert name of jurisdiction/organization] encourages people to give cash donations to one of the voluntary organizations involved in the relief operation.

The [insert name of jurisdiction/organization] is helping to coordinate donations of money, goods, and services with agencies that are able to receive, store, and distribute donated items.

For more information on what and where to donate, please go to www.ready.wi.gov or call [insert information and referral phone bank number].
VI. Appendix B. Adventist Community Services Agreement

Agreement between the Wisconsin Department of Military Affairs, Division of Emergency Management and Adventist Community Services for Managing Donated Goods in the Event of a Declared Disaster

In an effort to provide support and stability to the community based voluntary agencies distributing donated goods, the Wisconsin Department of Military Affairs, Division of Emergency Management and Adventist Community Services enter into the following agreement.

1. Adventist Community Services will provide leadership and training for community based volunteers to coordinate the flow of incoming undesignated donated goods.

2. Adventist Community Services will provide management of a multi-agency warehouse and supervise local volunteers in receiving, sorting, packing, and inventorying donated goods.

3. Adventist Community Services will make all goods available to recognized local organizations carrying on a distribution program.

4. Adventist Community Services will supply, on request, a copy of the most current inventory to state or FEMA officials.

5. Adventist Community Services will turn over the overall operation to local volunteer organizations when they are able to assume and accept this responsibility.

The Wisconsin Department of Military Affairs, Division of Emergency Management will coordinate with other state agencies, local government agencies, as well as with other private relief agencies, to support the Adventist operation where donated resources cannot meet the need. That support may include, but not be limited to:

- Warehouse Space (50,000-100,000 square feet)
- Utilities and Phone Service (3 voice lines, 1 fax line)
- Computer and Printer (1 each)
- Copier and Fax (1 each)
- Tables (25 8-foot) and Chairs (20)
- Boxes (2,000 20”x20”x20” each) and Tape (100 rolls 50 yards each)
- Forklift (1) and Fuel
- Pallets (25) and Pallet Jack (1)
- Trucking (for delivery of goods to distribution centers)
- Cargo Van (1), Straight Trucks (2 24-foot), and Fuel
- Dumpster Service (6-9 cubic yards)

This agreement will become effective, as needed, based on a declaration of a disaster by the governor or by the president and may be terminated by either party with sufficient notice which will not cause hardship on the operation itself.

I. Introduction

I.A. Purpose
To outline a framework and process for supporting local jurisdictions in receiving, preparing, deploying, and tracking volunteers when major emergencies or disasters overwhelm local capabilities

I.B. Scope

I.B.1. This plan applies to both pre-registered and spontaneous volunteers who arrive to support local response and recovery efforts.

I.B.2. This plan applies to groups of volunteers who are affiliated with a voluntary or faith-based organization that is NOT a recognized disaster response organization.

I.B.3. Medical and health volunteers are managed through the Wisconsin Emergency Assistance Volunteer Registry (WEAVR) https://weavrwi.org/.

I.B.4. This plan does not apply to volunteers affiliated with recognized disaster response organizations such as the American Red Cross and SA that have a defined scope of disaster service delivery and response structure and are self-sustaining, independent organizations.

I.C. Policies
The points below summarize state law regarding liability and worker’s compensation coverage for emergency volunteers. The brochure Volunteer Management during Emergencies and Disasters FAQs, attached, provides additional explanations.

I.C.1. Responsibility for worker’s compensation

a) Sections 323.40 (2) and (3) of the Wisconsin Statutes:
An individual who registers in writing with a state agency or local unit of government’s emergency management program to provide his or her own labor without compensation, other than reimbursement for travel, lodging, or meals, during a disaster, an imminent threat of a disaster, or a related training exercise is considered an employee of the local unit of government for worker’s compensation under Chapter 102 of the Wisconsin Statutes for purposes of any claim relating to the labor provided.

I.C.2. Liability of state or local unit of government volunteers
   a) Section 323.41 (2) and (3)(a) of the Wisconsin Statutes:
      An individual who registers in writing with a state agency or local unit of government’s emergency management program to provide his or her own labor without compensation, other than reimbursement for travel, lodging, or meals, during a disaster, an imminent threat of a disaster, or a related training exercise is considered an employee of the local unit of government for worker’s compensation under Sections 893.80, 893.82, 895.35, and 895.46 of the Wisconsin Statutes (as applicable), for purposes of any claim relating to the labor provided.

I.C.3. Exceptions
   a) Section 323.41(4) of the Wisconsin Statutes:
      Does not apply if the person’s act or omission involves reckless, wanton, or intentional misconduct.

I.C.4. Reimbursement of local units of government
   a) Section 323.42 of the Wisconsin Statutes:
      In any calendar year, if the amount the local unit of government is liable for under Sections 323.40 and 323.41 of the Wisconsin Statutes, plus losses incurred under Section 323.43 of the Wisconsin Statutes, exceed $1 per capita of the local unit of government’s population, the state shall reimburse the local unit of government the amount of the excess.

I.C.5. Volunteer health care practitioners
      Liability and worker’s compensation coverage under Sections 323.40 and 323.41 is not applicable to volunteer health care practitioners who are indemnified under Section 257.03 of the Wisconsin Statutes.

I.C.6. Equipment and supplies
      Providers of equipment and supplies under Section 323.45 of the Wisconsin Statutes are not eligible for liability and worker’s compensation coverage under Sections 323.40 and 323.41.

II. Concept of Operations

II.A. General
      When activated during disaster response and recovery, this plan prompts the mobilization of a Volunteer Coordination Team (VCT) to:

      II.A.1. Assess the needs of local jurisdictions requiring support in managing spontaneous volunteers from the public and the private sectors.
II.A.2. Develop strategies for meeting local volunteer management support needs.
   a) Evaluate the resources and capabilities to which the state has access.
   b) Consider both in state and out-of-state voluntary organizations.
II.A.3. Locate and dispatch resources to support local volunteer management.

II.B. Mobilization

II.B.1. When a triggering incident or event occurs, the SEOC manager directs the WEM voluntary agency liaison (VAL) to activate the Wisconsin Volunteer Management Plan. Examples of triggering incidents or events include, but are not limited to:
   a) SEOC staff anticipates the potential of large numbers of spontaneous volunteers because:
      (1) The nature of the emergency or disaster is such that there is a high likelihood that there will be a need for large numbers of workers for operations such as sandbagging or debris clearance.
      (2) There is significant media coverage of the incident or event.
      (3) There are high numbers of inquiries from the public seeking information on how to help.
      (4) Volunteers have begun to converge on the disaster scene.
   b) A local emergency management agency has requested support.
   c) A member of the VCT recommends that they convene.
II.B.2. WEM, in coordination with the WI VOAD chairperson (or designee), facilitates a meeting/conference call to determine if there is a need for activation of state volunteer management resources.

II.C. Organization

II.C.1. VCT composition
   a) WEM
   b) American Red Cross
   c) DMA general counsel
   d) ESF 15 representative
   e) SA
   f) Volunteer Wisconsin
   g) WI DHS
   h) WI VOAD
   i) Others as may be necessary
II.C.2. Donations and Volunteer Management
II.D. Volunteer Management System Components

II.D.1. VCT

a) Assesses the needs of the local volunteer management operation and identifying where state resources could be utilized

(1) Provides scaled levels of assistance such as:

(a) Support with public information
(b) Technical support
(c) Incident management teams
(d) Volunteer registries

(2) Coordinates with other disaster relief organizations:
Volunteer Management

(a) To identify potential volunteer opportunities
(b) To avoid duplication
(c) To ensure equity of access to support resources among multiple disaster locations

(3) Coordinates closely with EOCs in the disaster area to identify potential volunteer opportunities.

b) Provides a list of organizations accepting volunteers to the state public information officer (PIO) to coordinate messaging.

(1) Standardizes and facilitates the delivery of all messaging related to volunteer management operations.

c) Develops a state-level strategy for providing/supporting local volunteer management leadership.

d) Coordinates through the WEM regional directors and in conjunction with local officials to establish a location to receive and manage volunteers.

e) Convenes in support of local volunteer management operations, as needed.

II.D.2. Volunteer registry – Many locations, including WEM, utilize the disaster portal of the Volunteer Connection. A number of Wisconsin sites use an alternate registry. Many local jurisdictions have no registry in place.

a) Provides prospective volunteers with an opportunity to pre-register to volunteer for disaster response and/or recovery operations

(1) Allows volunteers to identify specific skills and areas of interest
(2) Allows volunteers to specify availability

b) Provides prospective volunteers with a selection of organizations soliciting volunteers for specific operations

c) Provides voluntary organizations with a system to recruit volunteers for specific operations

II.D.3. Wisconsin Emergency Volunteer Network (WEVN)

a) Consists of trained local, county, tribal, and state emergency volunteer managers and disaster portal administrators

b) Provides ongoing support and mentors to members

c) Provides support and mentoring to local jurisdictions developing emergency volunteer management capabilities

d) Deploys to disaster locations to support volunteer management operations, as needed

e) Is coordinated by WEM

II.D.4. Wisconsin Disaster Information Assistance Line (WI-DIAL)

a) Can mobilize as a call center during non-radiological disasters

b) When appropriate, refers prospective volunteers to the disaster portal of the Volunteer Connection or other active emergency volunteer registries

c) Provides callers with direction on methods of volunteering
d) Discourages spontaneous volunteering

II.D.5. Incident management teams (IMT)

a) May be drawn from the DNR or from regional Wisconsin IMT units

b) Provides support and services to the local incident command system (ICS) structure

c) Initiates volunteer management operations in the event there is a delay in the activation/arrival of dedicated donations management organizations and personnel

d) Conducts volunteer management operations on behalf of and as authorized by the local jurisdiction in the event of a lack of local volunteer management capability

II.D.6. Volunteer reception center (local)

a) Provides for a site or facility at which to formally register volunteers, including:
   (1) Reception and orientation
   (2) Interview and assignment
   (3) Safety and liability briefing
   (4) Volunteer verification

b) Assigns volunteers to those operational activities authorized for volunteer responders by the chief elected official and incident commander

II.D.7. Wisconsin Credentialing & Asset Management System (WICAMS)

a) Provides badging for authorized volunteers, including:
   (1) Pre-incident credentialing of established volunteers
   (2) On-site badging at volunteer reception centers

b) Is provided by WEM with the assistance of WEVN

II.E. ESF Activities

The WERP Basic Plan defines standardized tasks that constitute the prevention, protection, mitigation, response, and recovery responsibilities of any agency that serves a role in emergency management. This section defines those activities that are unique to ESF 7, and is intended to be used in conjunction with the common tasks outlined in the Basic Plan.

<table>
<thead>
<tr>
<th>Phase</th>
<th>Action Item</th>
<th>Agency</th>
</tr>
</thead>
</table>
| Response Activities Public Information | • Provide support with immediate public messaging to encourage prospective volunteers:  
  o To affiliate with existing voluntary organizations  
  o To preregister to volunteer with the disaster volunteer registry at the Volunteer Connection and/or other active emergency volunteer registries  
• Coordinate immediately with the DMA webmaster to create a landing page on ReadyWisconsin to provide directions to prospective volunteers.  
• Direct prospective volunteers to ReadyWisconsin, which will provide instructions and a hyperlink to the Volunteer Connection (and/or other active emergency volunteer registries), where they can register to volunteer. | WEM    |
If volunteer reception centers are operating in affected local jurisdictions, provide coordinated messaging to inform the public about how to participate in those local opportunities.

**Liability Considerations**
- Provide consultation with local officials in determining whether to accept volunteer response and recovery workers and in determining responsible parameters for their deployment.
- Provide standardized forms and model record-keeping resources.

**Incident Management**
- Assist localities in finding and deploying IMTs to initiate volunteer management operations.
- Assist local jurisdictions in implementing Volunteer Connection.
  - Provide an experienced disaster portal administrator to initiate volunteer registration and to provide just-in-time training to local administrators.
- Deploy WICAMS as needed.
- Activate WEVN.
- Assist local jurisdictions in acquiring facilities and logistical support for volunteers.
- Assist local jurisdictions in organizing tasking and tracking systems for volunteers.

**Information and Referral**
- Publicize and facilitate local jurisdictions’ use of Volunteer Connection.
- Facilitate the mobilization of an existing referral organization such as 2-1-1 Wisconsin to refer or process volunteer-related inquiries.
- Mobilize WI-DIAL.

---

VOLUNTEER MANAGEMENT DURING EMERGENCIES AND DISASTERS

FREQUENTLY ASKED QUESTIONS (FAQs)

Prepared by:
Randi Wind-Millsap
General Counsel
Wisconsin Department of Military Affairs
Phone: (608) 242-3972
Email: randi.millsap@wisconsin.gov

NOTE: This document is only meant to serve as a guide to answer general questions about legal issues in emergency/disaster volunteer management and pertains specifically to volunteers registered with a unit of government. “Volunteer” refers to an individual who assists during emergencies or under disaster declarations. Individual legal issues will be situation specific; thus, actual outcomes or advice may differ from the responses provided in this document. Acknowledgement: Special thanks to Jim Kennedy with the Kenosha County Department of Human Services for his assistance in developing these questions.

November 2011
I. Costs and Coverage

For a volunteer* who incurs costs as a result of volunteering (e.g., medical expenses or lost wages/income due to injury related to volunteer service), which of the following costs are covered? See Table 1.

Table 1: Costs and Coverage

<table>
<thead>
<tr>
<th>Type of Cost</th>
<th>Coverage Afforded a Volunteer of a Unit of Government</th>
</tr>
</thead>
<tbody>
<tr>
<td>Medical expenses for volunteers who are injured</td>
<td>Medical costs are covered for injured volunteers. There is no distinction between short or long term costs – delayed onset health conditions arising from the initial injury are also covered.</td>
</tr>
<tr>
<td>Lost wages/income for volunteers who are injured</td>
<td>Volunteers are eligible to receive worker’s compensation benefits.</td>
</tr>
<tr>
<td>Lost wages/income for volunteers who are killed</td>
<td>Volunteers who are killed while in the scope of volunteer activities are eligible for death benefits and compensation related to burial expenses.</td>
</tr>
<tr>
<td>Damage to a volunteer’s personal property</td>
<td>Damage to a volunteer’s personal property is not covered.</td>
</tr>
</tbody>
</table>

*The volunteer must have registered in writing with the appropriate unit of government prior to volunteering. The volunteer is also responsible for immediately reporting any injuries or accidents that happen. Volunteers are distinct from volunteer healthcare practitioners (VHCs). VHCs are not addressed here.

What amount or percentage of each of the above costs would be covered?
Generally, claims for medical expenses are subject to review by claims adjusters and risk management officials. In many instances, claims adjusters review and adjust costs for medical procedures, medications, and other pertinent factors. Claims for permanent or temporary disabilities are paid out subject to certain formulas based upon the percentage and type of disability suffered.

What time or monetary limits apply?
Injuries or accidents not reported to the sponsoring unit of government by the volunteer within 30 days of the occurrence of injury or within the first 30 days of knowledge of injury may be denied. Under §323.42 of the Wisconsin Statutes, there is a monetary cap of $1 per capita for a sponsoring unit of government for injured volunteers. (For example, a city with a population of 30,000 would have a monetary cap of $30,000 of eligible costs per event.) The state provides excess reimbursement to the sponsoring unit of government for costs above the cap. There is no monetary limit for excess reimbursement claims.

Who bears responsibility?
Volunteers must register in writing with a sponsoring unit of government. The sponsoring unit of government is responsible for paying costs associated with volunteer injury or death. The state acts to reimburse a sponsoring unit of government when the liability cap is exceeded. If claims are denied, some costs could be borne by the volunteer or his/her insurer. This is most likely to happen when a volunteer is not registered in writing or a volunteer acts beyond the scope of permissible and reasonable volunteer activities.

Is the $1 per capita limit for local units of government a per calendar year or per event cap?
Statutorily, the $1 per capita limit is a per calendar year cap; however, in practice the cap is per emergency or disaster event. When a local unit of government accrues more than $1 per capita in liability, every dollar above the cap may be eligible for state reimbursement. This includes events that result in long-term injuries that require years of recovery and rehabilitation. Once the $1 per capita threshold for an event is reached, eligible excess costs will be reimbursed by the state.

Does the $1 per capita maximum liability figure apply only to single units of government, or can it be shared between multiple units of government?
The $1 per capita maximum of liability applies to the "sponsoring" unit of government. The unit of government that registers volunteers in writing is the sponsoring unit and is responsible for the $1 per capita liability. A situation could arise where the $1 per capita maximum could be lumped together with other sponsors. See Table 2.

Table 2: Determining Sponsors

<table>
<thead>
<tr>
<th>Relevant Factors</th>
</tr>
</thead>
<tbody>
<tr>
<td>Where the volunteer registered</td>
</tr>
<tr>
<td>The site where the injury occurred</td>
</tr>
<tr>
<td>Who the volunteer registered with (i.e., what unit or units of government were on the registration document)</td>
</tr>
</tbody>
</table>

II. Volunteer Conduct

Volunteers may be subject to tort liabilities. Such liabilities could arise from situations where the volunteer caused death, injury, or property damage. What protections do volunteers have against these liabilities? Typically, volunteers register in writing with a local unit of government. Assuming the registration is valid and the volunteer was acting within the scope of his/her volunteer duties, the local unit of government is responsible for paying volunteer costs associated with tort liability.

With respect to tort liability protections, what time or monetary limits apply? To the extent that tort liability protections exist, there are statute of limitations and monetary limits associated with claims against governmental bodies.

Does there need to be a formal disaster declaration for coverage to apply? A registered volunteer is considered an employee of the sponsoring unit of government for worker’s compensation purposes during a disaster, an imminent threat of a disaster, or a related training exercise. Formal declaration of disaster is not required by statute.

What is required for a volunteer to be covered to the greatest extent possible under Wisconsin law? Volunteers must register in writing with the state or a local unit of government at the time of the event. Volunteers who are not registered in writing are not covered, regardless of circumstance. Volunteers who register have the full protection of state law. However, willful, wanton, or intentional misconduct is not covered under any circumstance.

Are there any special provisions for volunteers under the age of eighteen? Volunteers under the age of eighteen must obtain consent from a parent or guardian before they volunteer. Those who obtain consent are covered in the same manner and afforded the same protections as other volunteers.

Are non-citizen volunteers covered? There is no statutory language distinguishing coverage based on citizenship. Non-citizen volunteers are protected like citizen volunteers.

Are volunteers that provide mental or pastoral care covered? Volunteers who provide mental health services (and are certified or licensed to do so) would be covered as volunteer health care practitioners (VHCPs). Volunteers who provide pastoral care (i.e., clergy, lay ministers, etc.) would be covered as volunteers.

What type of volunteering (as it relates to Chapter 323 of the Wisconsin Statutes) is covered for volunteers registered with the state or a local unit of government? Activities covered include responding to an imminent threat of disaster, responding to a disaster, and training activities.
Are there minimum information requirements for volunteers to be registered in writing? Does meeting or exceeding the minimum registration requirements offer increased liability protection?

There are no minimum information requirements to register a volunteer in writing; however, the sponsoring unit of government should request sufficient information so that the volunteer is identifiable based on his/her responses.

Table 3: What to Include on a Registration Document

<table>
<thead>
<tr>
<th>Recommended Information to Request Volunteers to Provide</th>
</tr>
</thead>
<tbody>
<tr>
<td>• First and last name</td>
</tr>
<tr>
<td>• Permanent street address (not P.O. Box)</td>
</tr>
<tr>
<td>• Date of birth</td>
</tr>
<tr>
<td>• Task assigned</td>
</tr>
<tr>
<td>• Work location</td>
</tr>
<tr>
<td>• Time in</td>
</tr>
<tr>
<td>• Time out</td>
</tr>
</tbody>
</table>

Obtaining, at a minimum, the information in Table 3 increases the likelihood that registered persons will be identifiable. Never request Social Security numbers on the volunteer registration document, as the form may be subject to release under the Wisconsin open records law.

Is it necessary for volunteers to have undergone training in order for them to be fully protected by Chapter 323 or other Good Samaritan laws? Are units of government less protected if their volunteers have not been trained?

Volunteers acting in good faith are equally protected whether or not they have been trained. Volunteer negligence, however, might increase liability for the unit of government. For example, if a volunteer was provided a chainsaw, but received no formal training on the proper use of the chainsaw and went on to injure himself/herself or someone else, the unit of government could be held liable based on willful, wanton, or intentional misconduct.

Are local units of government liable for tort claims against their volunteers?

If volunteers act in good faith, they are likely to be covered. In this context, “good faith” means not acting with willful, wanton, or intentional misconduct. Criminal actions are, however, not covered.

**III. Recommendations**

- Collect sufficient information from volunteers to ensure identification. (See Table 3.)
- Assign volunteers to specific task(s) and location(s), i.e., scope.
- Record time in/time out of each volunteer.
- Ensure volunteers are informed of and understand the scope of their volunteer activities.

Supervise volunteers to ensure they do not exceed their assigned scope of volunteer activities.
VI. Appendix B. Sample Public Messaging and Talking Points

VI.A. Volunteers

VI.A.1. PLEASE – DO NOT GO TO THE SCENE OF THE DISASTER
VI.A.2. The arrival of unexpected volunteers will interfere with the response efforts
VI.A.3. STAY SAFE by volunteering with a reputable agency.
VI.A.4. Volunteers will be needed most during the recovery phase. Please be patient and WAIT until relief agencies can train you and use your help.
VI.A.5. If you want to volunteer, go to http://volunteer.truist.com/wevol and sign up with the Volunteer Connection; or call 2-1-1.
VI.B. Volunteer Reception Center News Release

Date:
Time:
Contact Phone:
Fax:

VOLUNTEER RECEPTION CENTER OPENED

Sample County, WI - In response to [insert name/type of incident and area affected] in [insert location], the [insert city/cities] [has/have] opened a local volunteer reception center in [insert city location]. The volunteer reception center will match people who want to help with appropriate volunteer opportunities.

Volunteers can visit the volunteer reception center located at [insert street address and city] between [insert opening time] and [insert closing time], or they may call [list area code and phone number] to learn about current volunteer needs and urgent skill requests. [Insert instructions on what volunteers should wear, where they should report, what they should bring (e.g. ID, gloves), and what is required (e.g. tetanus shots, certifications).]

Agencies that need volunteers should call [insert area code and phone number].

[IF NEEDED, ADD THIS SECTION]

Volunteers with [list specific urgent skills needed such as language, medical, etc.] should contact the volunteer reception center immediately.

List of Figures

Figure 1: Resource Mobilization Flowchart ......................................................................................... 10
I. Introduction

I.A. Purpose

The purpose of the Emergency Resource Mobilization Plan is to provide guidelines to quickly identify, prioritize, allocate, mobilize and deploy all-hazards resources to any Wisconsin jurisdiction, in the event an incident requires resources beyond those available locally, or under any existing inter-jurisdictional or mutual aid agreement.

I.B. Scope

The Mobilization Plan is intended to be scalable from single resource requests to complex logistics operations. The plan is designed to provide resources to any incident beyond local capabilities that are necessary to protect life, property, the environment, and cultural and economic resources. The plan pertains to requests for resources and does not reflect the protocols for a disaster declaration.

I.C. Objectives

I.C.1. To provide a system for efficient mobilizing, tracking, allocation and demobilization of emergency resources.

I.C.2. To ensure the requesting agency receives the proper equipment and qualified personnel in a timely manner.

I.D. The Mobilization Plan

I.D.1. Describes state organizations, resources, and the process for mobilization of resources in response to an incident that exceeds the capabilities or capacity of local and mutual aid resources.

I.D.2. Serves as an educational tool for all emergency response personnel to familiarize themselves with the state mobilization system.

I.D.3. Establishes procedures for reimbursement for eligible costs for resources mobilized under this plan.

I.D.4. State emergency resource mobilization is not a replacement for local response, mutual aid, or regional response plans. All political subdivisions of the State are encouraged to enter into formal local and regional mutual aid agreements and contracts with private sector vendors.

I.D.5. Mutual aid agreements provide for rapid assistance from neighboring jurisdictions to meet the immediate requirements of an incident requiring resources beyond those available from the local jurisdiction. The key element of mutual aid is quick response from the closest, most appropriate resources. Rapid intervention by mutual aid resources can stabilize an emergency incident that may otherwise continue to escalate.

I.E. Plan Revision

The Comprehensive Response Working Group plan will review and update the plan on a bi-annual basis.
II. Concept of Operations

II.A. Foundation Principles of the Incident Management System

II.A.1. Engaged partnerships
Wisconsin leaders at all levels have collaborated to develop shared response goals and align capabilities. This collaboration is designed to know your partners and their capability ahead of an incident to prevent any level from being overwhelmed in times of crisis.

II.A.2. Tiered response
Efficient management of incidents, so that such incidents are handled at the lowest possible jurisdictional level and supported by additional capabilities only when needed.

II.A.3. Flexible, scalable, adaptable operational capabilities
Capabilities are implemented as incidents change in size, scope, and complexity, so that the response to an incident or complex of incidents adapts to meet the requirements under the National Incident Management System (NIMS)/Incident Command System (ICS) management by objectives. The NIMS/ICS resources of various, formally defined resource types are requested, assigned, and deployed as needed; then demobilized when the capability is no longer needed.

II.A.4. Unity of effort through Unified Command
This seamless coordination is guided by a common response management system. The effort is standardized using "plain english" communication protocol and respect of participating agency chain of command between command structures and assigned resources among multiple jurisdictions that may be joined at an incident complex.

II.A.5. Readiness to act
Premised on preparedness including planning, training, exercise, proactive vigilance, and continuous improvement. It is our collective duty to provide the best response possible and be ready when called upon. From individuals, households, and communities to local, tribal, state, and federal governments, national response depends on our readiness to act. Wisconsin plans, trains and exercises to insure Readiness to Act in order to protect the citizenry, infrastructure, property, and business community in the State of Wisconsin.

II.B. Key Provisions of the Wisconsin Mobilization Plan

II.B.1. State, local, tribal, and private sector partners all have a critical role in Wisconsin's Resource Mobilization Plan.

II.B.2. Resource mobilization has to be planned, and the plan must be maintained for it to succeed.

II.B.3. Active support and participation enhances local government self-sufficiency and improves statewide disaster preparedness.

II.B.4. Participating agencies should keep contact and resource information current and update at least annually.

II.B.5. Local jurisdictions should be prepared to implement the plan.
II.B.6. All jurisdictions should conduct bi-annual review and continuous refinement of existing plans and programs.

II.B.7. The State’s role is primarily to locate and coordinate the deployment of resources in support of the local incident commander. The may include deployment of state-owned or contracted resources, as well as identification of resources that are then arranged and contracted directly by the requesting agency.

II.C. Responsibilities

II.C.1. Requesting Agency Responsibilities:

a) Local governments will utilize available resources within their jurisdiction first while maintaining minimum response capabilities to address other incidents that may occur.

b) Request resources through the State Emergency Operations Center (SEOC), if elevated, or via the WEM Duty Officer (DO) or WEM region director, by direct verbal request from an authorized individual listed in Section II.

c) Seek assistance in responding to an incident from WEM, regarding technical assistance, coordination, and management of resource mobilization and development of strategic and institutional relations with partners.

d) Place resource requests to meet specific mission objectives.

e) Manage the incident using National Incident Management System (NIMS).

f) Receive deployed personnel and equipment; make work assignments as needed.

h) Submit written or verbal status reports to the SEOC/WEM.

i) Following large scale incidents requesting agencies will participate in a facilitated after-incident debriefing and include WEM and other assisting agencies.

II.C.2. Assisting Agency Responsibilities:

a) Pre-plan and inventory personnel and resources.

b) Ensure that personnel are properly trained and equipped, and equipment is properly maintained and ready for deployment.

c) Maintain procedures for proper mobilization, demobilization, and return of resources.

d) Monitor incident status to insure deployment readiness.

f) Brief the requesting agency about what to expect, including all potential contingencies and a “worst case” scenario.

h) Coordinate with the SEOC/WEM on all resource deployments and provide notification of mission changes to the SEOC/WEM for resource tracking.

II.C.3. SEOC/WEM Responsibilities:
a) Ensure the availability of the WEM DO and maintain adequately staffed and trained SEOC personnel in order to meet the operational needs of the incident.

b) Maintain a resource list and standard operating procedures for resources deployable via WEM.

c) Provide training to state, tribal, local, and private sector partners on the resource mobilization plan and procedures.

d) Maintain a system for documenting resource requests, tracking resource deployments, and sharing information during an incident.

e) Assist the requesting agency to locate resources. WEM maintains a state resource list that includes owner, contact information, location, NIMS Type/Kind, mobilization time, and a description of the resource. This list is updated on an ongoing basis and is reviewed for completeness and accuracy after each drill, exercise, or real event.

f) Coordinate resource requests with resource providers based upon the mission objectives provided by the requesting agency, and prioritize requests if necessary.

g) Maintain situational awareness and distribute regular situation reports on the status of deployed resources.

h) Conduct a periodic gap analysis to identify and prioritize resource needs and shortfalls. This process will be completed using various methods, initiated by multiple programs.

(1) The Comprehensive Response Group will analyze resources capabilities and shortfalls through its nine established subgroups. (WEM Policy 1006.3, Section III.B and III.D.2).

(2) Resource needs will also be identified during After-Action Reviews of all drills, exercises and real events. (WEM Policy 5008.0, Section C,3.b.4).

(3) Once resource shortfalls are identified, they are prioritized by life safety, incident stabilization and protection of property needs.

III. Implementation

The process to implement the Mobilization Plan begins at the local level. The Mobilization Plan can be implemented, by an authorized individual, once it is determined that resources are needed beyond what are available locally or through existing mutual aid agreements. The process is described below and graphically represented in the Resource Mobilization Flow Chart on page 6.

III.A. Authority to Request State Assistance

III.A.1. The authority to request state resource mobilization is vested in the:

a) Local, County, or Tribal Emergency Manager or Designee

b) County Sheriff

c) County Executive

d) Tribal Leader

e) Local Chief Elected Official
f) Incident Commander

III.A.2. Only these positions, or an individual acting under a direct delegation of authority of these positions, have been vested with the authority to request state resource mobilization.

III.A.3. Requests for National Guard assistance are governed by s. 321.39, Wis. Stats., and follow the procedure specified in the WEM DO Manual.

III.A.4. Resource requests can be initiated by any of the above authorities through the WEM DO or SEOC during times of elevation. The DO or SEOC will assist any political subdivision in implementing the Mobilization Plan at any time.

III.B. Local Emergency Declarations

Local declarations of disaster or emergency may be in place, but are not required for deployment of resources. A small-scale or non-emergency incident may require specialized resources that are not available locally or through mutual aid and that the Mobilization Plan can be implemented for those necessary resources.

III.C. NIMS Incident Command System

All incidents by which requests for mobilization are requested and authorized must be managed and operated using the NIMS (National Incident Management System), of which the Incident Command System’s (ICS) is the primary component.

III.D. All Hazard Local Incidents

III.D.1. The Agency Having Jurisdiction (AHJ) initially responds and utilizes available local resources following local protocols to manage the incident.

III.D.2. The AHJ will be involved and responsible for the management of the incident for the duration of the incident, unless preempted by state or federal jurisdictions, regardless of the incident type or complexity.

III.E. Mutual Aid Resources

III.E.1. For all incidents exceeding or anticipated to exceed incident management capabilities, additional incident resources should first be requested through local or county mutual aid agreements.

III.E.2. Mutual Aid agreements or contracts with Wisconsin Emergency Management as a signatory will be reviewed annually and distributed for new signatures, if needed. Mutual Aid agreements and contracts with other state agencies will be maintained according to their policy for updating agreements.
III.F. Resource Mobilization Flowchart

Figure 1: Resource Mobilization Flowchart

III.G. Local/ Tribal Requests for Assistance

III.G.1. AHJ contacts County or Tribal Emergency Manager for Assistance
   a) AHJ resources should be utilized first. When available AHJ resources are exhausted or are anticipated to be exhausted, the emergency manager, or designee, may request resources from the county or tribal emergency manager.

III.G.2. County or Tribal Emergency Manager or Designee Requests Assistance through the SEOC/WEM.
   a) Local governments are responsible for communicating which resources are currently engaged in the incident and identifying what types of resources are being requested and their anticipated assignment.
   b) SEOC/WEM confirms request and initiates Resource Management Plan activation, as appropriate.

III.G.3. SEOC/WEM fills order
   a) The SEOC may consist of a single staff person or be staffed to full capacity, dependent upon the scope of the incident.
   b) The SEOC staff or WEM DO will complete all steps and forms designated in the appropriate SOP or checklist and comply with all procurement rules and processes (WEM Policy 2002.2).
c) Assisting agencies retain administrative control of their personnel and equipment when tasked to support the SEOC, other state agencies, or local jurisdictions.

d) Assisting agencies are responsible for advising the SEOC of any need for backfill of mobilized resources. The SEOC/WEM will locate the most appropriate available resource(s) meeting the needs of the backfill request.

e) Confirmation of the requested resources and related travel information will be relayed back through these channels to notify the requesting AHJ.

f) Once resources are mobilized, the County or Tribal emergency manager should provide status reports to the SEOC/WEM as soon as practical.

III.G.4. State Resources Expended

a) In the event all available resources within the state have been depleted or mobilization of resources from an adjoining state allows for quicker response, orders will be placed through the appropriate WEM defined ordering process such as the Emergency Management Assistance Compact (EMAC) for state-to-state mobilization.

b) In the event that federal resources are required, WEM will coordinate the request for federal resources through the Federal Emergency Management Agency (FEMA).

III.H. State Agency Requests for Assistance

State agencies may request resources directly through the SEOC/WEM to support state operations or to respond to requests for assistance from the field. When requesting resources, state agencies should follow the steps and actions in the appropriate SEOC SOP.

III.I. Resource Reception Center (RRC)

When called upon, the SEOC/WEM will use IMT to establish and conduct RRC processes to receive, stage, prepare, and integrate response assets in support of an Area or Unified Incident Commander in the event of a regional disaster. Reverse RRC operations will be used to demobilize and return response personnel and their equipment back to their home station.

III.J. Demobilization

It is the responsibility of the incident commander to be fully aware of the extent and capacity of resources at his or her disposal. The demobilization process is as important as mobilization in maintaining the incident commander’s knowledge of resources available at any given time. The incident commander is responsible for ensuring that a demobilization plan is developed and preferably distributed 24 hours prior to the first anticipated release. The plan will involve personnel from all ICS functions in order to provide full resource accountability.

III.J.1. Effective demobilization requires that personnel sign out of service and depart from the incident scene in an organized and responsible manner. To facilitate an orderly and cost effective demobilization process, an accurate and complete compilation of records of time, supplies, and equipment expended in handling an emergency incident is essential.

III.J.2. All mobilized personnel will insure that their demobilization orders are validated by the Planning Section.

III.J.3. All supervisors will verify all personnel are accounted for, all equipment is properly accounted for, and all forms are properly completed and signed.
III.J.4. Demobilization will include check-in with the logistics and finance sections. This is the time to communicate and sign-off on all emergency repairs on equipment. The Finance Section Chief must approve of these prior to demobilization.

III.J.5. The Demobilization Unit Leader will inform the SEOC when resources are released, anticipated travel routes, and estimated times of return; the State will notify the assisting agency.

III.J.6. Demobilized resources will return directly to their home agency or other assignment.

III.J.7. All personnel will complete the required forms and reports of their assigned position.

III.K. Debriefing

Debriefing is used to assemble critical information and lessons learned for future reference and areas of improvement. Debriefing should consist of:

III.K.1. An assessment of hazardous materials encountered or involved, and a report of personnel exposure records.

III.K.2. An evaluation of personnel and confirmation status of any injuries or illness prior to release. May include critical incident stress activities and follow-up personnel names and phone numbers for future critical incident stress debriefing.

III.K.3. A summary of activities of each section and strike team, task force, or other personnel and equipment, including topics for follow-up and positive reinforcement of their part in the incident.

a) Written performance evaluations establish a clear understanding of how well the incident was managed by personnel so that areas for improvements can be readily identified.

IV. Mobilized Resources

IV.A. Personnel

Mobilized personnel must be:

IV.A.1. Trained, qualified, and experienced in the positions for which they are mobilized.

IV.A.2. Self-sufficient for the operational period needed by the AHJ.

a) Fully equipped with required personal protective equipment (PPE), safety equipment, and other supplies needed to perform the requested task, unless those supplies are being provided by the AHJ.

IV.A.3. Physically conditioned and fit to perform the task assigned.

IV.B. Apparatus/Vehicles/Equipment

IV.B.1. Equipment should be properly maintained in a state of readiness for deployment.

IV.B.2. Requesting agencies are responsible for proper use and maintenance of equipment in deployment status. Requesting agencies may be responsible for any repairs, cleaning, or replacement of parts or supplies necessary due to the deployment.
IV.B.3. Units found to be unreliable or unsafe may be decommissioned by the incident commander at any time. Decommissioned units are not eligible for any payments until returned to service by the incident commander.

**IV.C. Incident Management Teams**

IV.C.1. The state maintains four Type III and one Type II all-hazards Incident Management Teams (IMT) that can provide assistance to support local incident commanders.

a) The teams consist of personnel from appropriate disciplines (fire, rescue, emergency medical, hazardous materials, law enforcement and public health) trained to perform the functions of the Command and General Staff in the Incident Command System.

b) These functions include Command, Operations, Planning, Logistics, and Administration/Finance, as well as Safety, Public Information, and Liaison.

c) Members of the initial responding departments often fill these functions; however, the size, complexity, or duration of an incident may indicate the need for an IMT to support them.

IV.C.2. IMTs do not replace local emergency managers and incident commanders, but they assist under a Delegation of Authority Agreement.

a) The purpose of the Delegation of Authority is for the IMT to manage the incident using objectives provided by the AHJ (i.e., legal command and incident decision authority).

b) Control and management of the incident will be in accordance with prescribed instructions and limitations the AHJ establishes.

**IV.D. Private Sector Resources**

IV.D.1. Local jurisdictions may contract with private sector entities and, under the terms and conditions of that agreement, make use of a resource within that jurisdiction. These private contract resources are then mobilized as a local jurisdiction resource.

IV.D.2. Under certain conditions, the SEOC may order or contract for commercially available resources as needed by local authority to alleviate threats to life, property, and the environment.

IV.D.3. The SEOC maintains a list of vendors and contact information for some commodities that may be required in a disaster. This information can be requested by county, local, and tribal units of government. The appearance of a vendor on said list in no way constitutes an endorsement of that vendor.

IV.D.4. Many state contracts contain cooperative purchasing agreements that allow use of the contract by local jurisdictions for procurement. The SEOC/WEM will work with the local jurisdiction to identify and facilitate the use of these contracts upon request.

**IV.E. Emergency Management Assistance Compact (EMAC)**

WEM Senior Management and the Logistics Section staff have completed EMAC A-Team training and are assigned as Authorized Representatives or Designated Contacts.
IV.E.1. When requests for resources come in via an EMAC broadcast, it is determined whether Wisconsin has the resource available and the appropriate state agency(ies) are contacted.

IV.E.2. Wisconsin has developed Mission Ready Packages (MRP) to more easily respond to requests for resources that are likely to be available for deployment.

V. Reimbursement

There is generally no cost for requesting state-owned resources for emergency purposes; the cost of the deployment is borne by the state agency providing the resource. Under certain circumstances there may be a cost associated with deploying a resource. In these cases the SEOC/WEM will inform the requestor that there may be a cost.

V.A. Expectations for Reimbursement

V.A.1. Requesting agencies may be eligible for reimbursement of certain costs, but only under the following circumstances:

a) If the State obtains a federal disaster declaration, certain costs may be eligible for reimbursement under federal disaster assistance funding. Reimbursement will be limited to that allowed under the FEMA Public Assistance Program and Policy Guide, and requires a cost-share.

b) If there is no federal disaster declaration, depending on the expense and type of event, the local government might be eligible for reimbursement, with a cost-share, through the Wisconsin Disaster Fund (WDF).

V.A.2. Equipment costs are reimbursed at the established local rate, the WI DOT established rates, National Guard rates, and the FEMA Equipment Rate Schedule for both federal declaration and WDF reimbursements.

V.A.3. In the absence of the above, the reimbursement relationship is between the ordering (AHJ) and the sending agencies/organizations. Equipment rental sourced from units of government or the private sector shall be the responsibility of the AHJ.

V.B. Process for Seeking Reimbursement

V.B.1. The processes for seeking reimbursement are outlined in the following documents:

a) Federal assistance – Public Assistance Administrative Plan
b) Wisconsin Disaster Fund – Wisconsin Disaster Fund Administrative Plan
c) Damage Assessment Guide

V.B.2. The WEM Recovery section can provide technical support and guidance to agencies seeking reimbursement from these programs.

V.C. Private Sector Resources

The reimbursement rate for equipment supplied by the private sector vendors will be the equipment rental rates established in local and state procurement contracts. The SEOC/WEM will follow all applicable state rules and guidelines in the procurement of goods and services during an emergency, and will consult with the Department of Administration as appropriate.
V.D. National Guard Resources

The reimbursement rate for equipment and personnel supplied by the Wisconsin National Guard is published by the Assistant Secretary of the Army for Financial Management & Comptroller (ASA FM&C). National Guard assets can either be requested in a state-declared emergency or by coordination through WEM. Reimbursement will be worked through Wisconsin State Budget and Finance.

Resource Mobilization Plan

Appendices
Intentionally left blank
VII. Appendix A. Definitions

The following are definitions of terms used in the Wisconsin State Emergency Resource Mobilization Plan.

**Agency Having Jurisdiction (AHJ)**
The agency having jurisdiction and responsibility for a specific geographical area, or a mandated function.

**Agency Representative**
An individual assigned to an incident from an assisting or cooperating agency that has been delegated authority to make decisions on matters affecting that agency’s participation at the incident. In ICS, Agency Representatives report to the Incident Liaison Officer.

**Allocated Resources**
Resources dispatched to an incident.

**Appropriate Response**
The planned strategy for action (in terms of the type, amount, and timing of resources) on an incident which most efficiently meets incident management objectives under current and expected conditions. The response may range from a strategy of prompt control to one of containment or confinement.

**Assembly Point**
A designated meeting location for mobilized resources.

**Assisting Agency**
An agency directly contributing tactical or service resources to another agency.

**Available Resources**
Resources available to respond to incidents beyond their local mutual aid area for a specified extended duration of time.

**Incident**
An occurrence either human caused or by natural phenomena, that requires action by emergency service personnel to prevent or minimize loss of life or damage to property and/or natural resources.

**Incident Commander**
The individual, by delegation of authority, responsible for the management of all incident operations at the incident site.

**Incident Command System (ICS)**
A standardized on-scene emergency management concept specifically designed to allow its users to adopt an integrated organizational structure equal to the complexity and demands of single or multiple incidents, without being hindered by jurisdictional boundaries.

**Incident Management Team (IMT)**
An organization of overhead personnel operating within the Incident Command System with responsibility for the management of resources to effectively accomplish objectives determined for an incident, under the direction of the Incident Command.

**Mission Ready Packages (MRP)**
MRPs describe specific response and recovery resource capabilities that are organized, developed, typed, trained, and exercised prior to an emergency or disaster.
Mobilization
The process and procedures used by all organizations (federal, state, and local) for activating, assembling, and transporting all resources that have been requested to respond to or support an incident. Normally beyond local and pre agreed upon automatic aid and/or mutual aid.

Mobilization Center
An off-incident location at which emergency service personnel and equipment are temporarily located pending assignment, release, or reassignment.

Multi-Agency Coordination (MAC) Group
Representatives of involved agencies and/or jurisdictions who come together to make strategic decisions regarding the prioritizing of incidents, and the allocation of resources. When activated, the MAC Group has the responsibility for coordination of assisting agencies in support of a multi-agency or multi-jurisdictional environment.

Multi-Agency Incident
An incident where one or more agencies assist a jurisdictional agency or agencies.

Multi-Jurisdictional Incident
An incident requiring action from multiple agencies that have a statutory responsibility for incident mitigation.

Mutual Aid Agreement
Written agreement between agencies and/or jurisdictions in which they agree to assist one another upon request, by furnishing personnel and equipment.

Mutual Aid Box Alarm System (MABAS)
The Mutual Aid Box Alarm System (known as MABAS) is a mutual aid measure that may be used for deploying fire, rescue and emergency medical services personnel in a multi-jurisdictional and/or multi-agency response. MABAS agencies agree to: standards of operation, incident command, minimum level of equipment staffing, safety, and on-scene terminology. MABAS agencies, regardless of geopolitical origin, are able to work together seamlessly on any emergency scene. All MABAS agencies operate on a common radio frequency, Interagency Fire Emergency Radio Network (IFERN) and are activated for response through pre-designed run cards each participating agency designs and tailors to meet their local risk need. MABAS also provides mutual aid station coverage to a stricken community when their fire/EMS resources are committed to an incident for an extended period.

National Incident Management System (NIMS)
Developed by the U.S. Department of Homeland Security Secretary, NIMS establishes standardized incident management processes, protocols, and procedures that all responders - Federal, state, tribal, and local - use to coordinate and conduct response actions.

Operational Period
A defined time period (e.g. 0600 to 0600 hours) in which a specific set of objectives are established for managing incident activities and for which specific resources and personnel are assigned to those activities, as determined by the incident commander.

Resource Kind
A classification of resources in the incident command system which refers to function; e.g. hand crew, helicopter, engine, and dozer.
Resource Reception Center (RRC)
When called upon, Wisconsin Emergency Management will use Incident Management Teams to establish and conduct resource reception center processes to receive, stage, prepare, and integrate response assets in support of an Area or Unified Incident Commander in the event of a regional disaster, and conduct demobilization operations to return response personnel and their equipment back to their home station.

Resource Request Number
A unique number assigned by the SEOC Logistics Section for tracking resources during an incident.

Resource Type
Refers to resource capability. A Type 1 resource provides a greater overall capability due to power, size, capacity, etc., than would be found in a Type 2 resource.

Resources
Personnel and major items of equipment available, or potentially available, to be assigned to incidents. Resources are described in the incident command system by kind and type.

Single Resource
An individual, a piece of equipment and its personnel complement, or a crew or team of individuals with an identified work supervisor that can be used on an incident.

Staging Area
Locations set up at an incident where resources can be placed while awaiting a tactical assignment.

State Emergency Operations Center (SEOC)
A facility operated by the Wisconsin Emergency Management to coordinate the overall response of state government agencies and assets in support of an incident.

Strike Team
Specified combinations of the same kind and type of resources, with common communications and a leader. For example, a Type 1 Engine Strike Team generally consists of 5, Type 1 Engines (meeting the minimum equipment and manning standards) under the control of a Strike Team Leader.

Task Force
A combination of single resources assembled for a particular tactical need, with common communications and a leader.

Wisconsin Emergency Response Plan (WERP)
The state level plan for actions to be taken by government and citizens when disaster threatens or strikes. It consists of assignment of responsibilities to state agencies, coordinating instructions, staffing, essential facilities, and general operations common to most major emergencies.

**I. Introduction**

**I.A. Purpose**

To provide for coordinated state public health and medical assistance to local, county, and tribal governments (including veterinary and animal health issues as they affect public health) during a potential or developing public health disaster or any emergency with a public health component.

**I.B. Scope**

I.B.1. Support may vary depending on:
   a) The assessment of incident impact  
   b) The magnitude and type of incident  
   c) The phase of the response and recovery efforts

I.B.2. ESF 8 describes how state agencies respond to public health aspects of emergencies including:
   a) Incidents with the potential to result in adverse public health consequences.
      
      (1) Nature disasters  
      (2) Accidents (radiological or chemical)  
      (3) Terrorism or intentional acts of violence  

   b) Disease outbreaks  
   c) Exposures to unknown substances directly linked to implicit or explicit threats

I.B.3. This plan describes the coordination of state support with local, county, and tribal governments in the provision of:
   a) Communication  
   b) Material assistance
c) Technical assistance and guidance

(1) Surveillance
   (a) Epidemiological investigation and laboratory services
   (b) Public health laboratory testing

(2) Public health measures
   (a) Quarantine and home care measures
   (b) Mass prophylaxis and treatment
      (i) Strategic National Stockpile (SNS)
   (c) Medical supplies management and distribution
   (d) Medical support to mass care
      (i) Wisconsin Emergency Preparedness Program - WHEPP Stockpile includes primarily Personal Protective Equipment (PPE) Ventilators, etc.
      (ii) Generate lists of appropriate, credentialed volunteer healthcare providers from relevant registries, as needed.

(3) Medical systems
   (a) Isolation and quarantine/environmental health/vector control
   (b) Triage and hospital pre-treatment
      (i) Specific patient resources or severity level as identified by first responders
   (c) References specifics outlined by triage designations
      (i) START – stands for Simple, Triage and Rapid Treatment or Transport
      (ii) SALT – stands for Sort, Assess, Life and Treatment and/or Transport
   (d) Medical surge

(4) Mass fatality management

(5) Evaluating the human health implications of hazardous substances or conditions

I.C. Policies

I.C.1. WI DHS has the authority to plan for and respond to disasters involving health and medical services under:

a) Emergency Management, Chapter 323 of the Wisconsin Statutes
b) Emergency Volunteer Health Care Practitioners, Chapter 257 of the Wisconsin Statutes
c) Health Administration and Supervision, Chapter 250 of the Wisconsin Statutes
d) Public Health Emergency Plan
e) Robert T. Stafford Disaster Relief and Emergency Assistance Act (42 U.S.C. §§ 5121 et seq.)
f) Health Insurance Portability and Accountability Act (42 U.S.C. § 1320d-2 et seq.)
I.C.2. Deaths will be investigated and processed under the requirements listed in Chapters 59, 69, and 979 of the Wisconsin Statutes.

I.C.3. For health and medical-related emergencies, WI DHS coordinates directly with local, tribal, other state agencies, and federal responders and provides for implementation of state response plans as appropriate.

II. Concept of Operations

II.A. General

II.A.1. The WI DHS/Division of Public Health (DPH) staffs ESF 8 during an elevation of the state emergency operations center (SEOC) to Level 3 or higher and coordinates the resources of WI DHS and other appropriate state and private organization resources with the SEOC.

   a) During a level 4 (Enhanced Monitoring Operations) elevation of the SEOC, WI DHS/Division of Public Health (DPH) may virtually coordinate resources and staff the SEOC if needed.

II.A.2. Local, county, and tribal public health authorities retain operational authority of ESF 8-related response and recovery in coordination with the local, county, and tribal emergency plan and the emergency operations center/incident command system.

   a) DPH will assist city, county, and tribal public health authorities when requested.
   b) DPH will coordinate ESF 8-related response and recovery during statewide events.

II.A.3. ESF 8 promotes the use of trained volunteers through the Wisconsin Emergency Assistance Volunteer Registry (WEAVR) and the local Medical Reserve Corps (MRC) units.

II.B. Notification of an Incident to WI DHS

II.B.1. Depending on the scope of the disaster, initial notification to WI DHS will typically come from:

   a) Local public health departments (LPHD)
   b) Tribal health centers
   c) 911 dispatch centers
   d) Health care providers
   e) State or county emergency management
   f) Media
   g) State or regional agencies
   h) Laboratories
   i) CDC
   j) Federal and border (or other) state health departments
II.B.2. The incoming call is routed to the staff person or the 24-hour on-call staff which covers the appropriate major area and then communicated to appropriate health and hospital partners:

a) Natural disaster or chemical spill
b) Communicable disease
c) Nuclear/radiological incident
d) Human services
e) Medical surge/mass casualty incident (MCI)

II.C. Alerting

II.C.1. Fast breaking incident

In the event WI DHS is alerted in advance of an incident or is one of the first agencies to be notified:

a) WI DHS may utilize the Public Health Alerting System and other communications systems to alert:
   (1) DPH regional offices
   (2) LPHD and tribal health centers
   (3) Wisconsin State Laboratory of Hygiene
   (4) Hospital emergency departments
   (5) WEM

b) Based on WI DHS and WEM consultations with LPHD and county emergency management:
   (1) WI DHS
      (a) May advise the activation of local public health emergency plans (PHEP), hospital, or emergency management plans that may initiate the activation of appropriate emergency operating centers (EOCs)
      (b) May activate the regional or state PHEP
      (c) May notify the CDC
   (2) WEM
      (a) May elevate the SEOC to Level 4 or higher
      (b) Can activate the Department of Justice TIME (Transaction Information for Management of Enforcement) system, which is linked to all dispatch centers in the state
      (c) May alert the FEMA Region V Regional Response Coordination Center (RRCC)

II.C.2. Slow developing incident

In a slow developing incident where the precipitating incident is unknown until the appearance of syndromes or disease cases, the LPHD(s), along with the hospital(s) and clinic(s) and the WI DHS will monitor the situation largely though the Wisconsin
Electronic Disease Surveillance System (WEDSS). The alerting process for fast breaking incidents can be applied in whole or in part for a slower developing biological incident.

a) Once health care facilities or laboratories identify any of the CDC Category A, B, or C diseases, indicative of a biological agent or outbreak of other infectious diseases, they will notify WI DHS, LPHDs, and health care facilities immediately according to the protocols outlined in Section II.D.: Active Surveillance.

b) The DPH, in collaboration with the LPHD, labs, hospitals, and clinics, confirm their findings.

c) The state may notify and consult with CDC.

d) The state and LPHDs consult with WEM on the need to elevate the SEOC and activate local EOCs.

e) After deciding to elevate the SEOC and activate local EOCs, state and local response agencies and hospitals are notified via alert systems by WI DHS.

f) The SEOC informs the FEMA Region V RRCC of incidents taking place in Wisconsin.

II.D. Active Surveillance

II.D.1. WI DHS Division of Public Health, Bureau of Communicable Disease (BCD) routinely conducts a variety of active surveillance activities including:

a) Analyze and monitor syndromic surveillance data as well as laboratory and case reports for possible outbreaks or epidemics, and provide timely reports back to the local health departments and the health care provider community.

b) Consult with federal and other state agencies in order to coordinate disease investigations with regional or federal investigations.

c) Provide to clinicians (human and animal) and health departments:

   (1) Current statewide epidemiological information on any disease outbreak

   (2) Case definitions and supplemental documentation

   (3) Consultation

   (4) Coordination of surveillance activities if multiple local jurisdictions or state agencies are involved

d) Make appropriate staff available through the DPH regional offices to assist LPHDs as needed in emergency situations.

II.E. Environmental Monitoring and Sampling

II.E.1. Environmental health teams evaluate environmental health risks and provide technical guidance for protecting the public, to include the need for conducting environmental monitoring and the collection of environmental samples.

a) Teams include specialists from DPH, DNR, DATCP, and WSLH.

b) When appropriate, members consult with first responders, hazmat units of local fire departments, and work with LPHD and tribal health centers to evaluate the situation.
c) Together, these agencies assess the need for control measures and identify environmental health risks during and after the incident.

II.E.2. If environmental assessment exceeds the capability or capacity of state resources, the WI DHS or other appropriate agency(s) request assistance from the following agencies for support in conducting environmental investigations, determining the need for mitigation and management, and recommending the appropriateness of reentry:

a) WING
b) EPA
c) Agency for Toxic Substances and Disease Registry (ATSDR)
d) Occupational Safety and Health Administration (OSHA)

II.E.3. In the event of suspected terrorism:

a) The Federal Bureau of Investigation (FBI), DATCP, DPH, DNR, or local hazmat unit may collect environmental samples.
b) The FBI may request assistance from state or federal staff with expertise in specific biohazards or chemicals.
c) As appropriate, sample collection and packing will be discussed with the WSLH or other laboratories.
d) Collection, packaging, and transportation of environmental specimens are conducted in accordance with existing procedures that ensure safety and chain of custody, as well as integrity of the samples.

II.E.4. Samples are forwarded for analytical or confirmatory work to the closest regional laboratory certified to perform the necessary testing.

a) Samples may be sent to WSLH, DATCP Bureau of Laboratory Services (BLS), crime labs, Wisconsin Veterinary Diagnostic Laboratory, the CDC, or other federal laboratory.
b) State labs coordinate and communicate with one another to determine which lab should receive the sample.
c) Capacity of local and regional laboratories to evaluate both clinical and environmental specimens is surveyed annually.

II.F. Response Procedures

WI DHS response systems are prescribed in the supporting plans identified in IV. A., Agency-Specific Supporting Plans and Procedures. The task of ESF 8 personnel during a mobilization will be to activate those plans, coordinate response actions with those of the supporting agencies, secure outside support and resources as necessary, and provide ongoing situational awareness to the SEOC.

III. Agency Responsibilities

The WERP Basic Plan defines standardized tasks that constitute the prevention, protection, mitigation, response, and recovery responsibilities of any agency that serves a role in emergency management. The following defines those responsibilities that are unique to ESF 8, and is intended to be used in conjunction with the common tasks outlined in the Basic Plan.
### III.A. Lead Coordinating Agency – Department of Health Services

#### Table 2: Lead Coordinating Agency Functions

<table>
<thead>

</thead>
<tbody>
<tr>
<td><strong>Agency as a whole</strong></td>
<td>Coordinate with incident command, the SEOC, and ESF 15 personnel to issue public information regarding health-related alerts and protective actions.</td>
</tr>
</tbody>
</table>
| **Surveillance**        | *Epidemiological investigation and laboratory services*  
                           *Public health laboratory testing*  
                           - Access event-specific information on specimen collecting, packing, transport, and testing specific from the WSLH.  
                           - Notify WSLH of the event and related response planning activities (e.g., teleconferences, videoconferences).  
                           - Provide guidance to local public health and the WSLH on criteria for patient and specimen selection.  
                           - Disseminate reports to local public health; disseminate CDC results to WSLH and LPHDs.  
                           - Inform WSLH when event has concluded or passed the acute stage.  
                           *Participate in laboratory response debriefing.* |
| **Public Health**       | *Quarantine and home care measures*  
                           - Provide guidelines for health care and public health personnel.  
                           - Assist LPHDs in clinical assessment of cases and need for isolation.  
                           - Provide current epidemiological information on the disease outbreak so LPHDs can accurately determine quarantine needs.  
                           - Provide consultation and coordinate activities if multiple local jurisdictions or state agencies are involved.  
                           *Mass prophylaxis and treatment*  
                           - Establish medical order to provide treatment or prophylaxis.  
                           - Establish procedures for receipt, inventory control, and distribution of Strategic National Stockpile (SNS) materials.  
                           - Request additional supplies for mass clinics.  
                           - Provide technical support and assistance to LPHDs operating mass clinics.  
                           - Provide LPHDs with communication templates and public information staff as necessary.  
                           *Medical supplies management and distribution*  
                           - Maintain lists of designated public health personnel to train and supervise volunteers to disassemble, organize, and repackage SNS materials and prepare them for transportation at the Receipt, Storage, and Staging (RSS) warehouse.  
                           - Obtain seven facilities to be used as RSS warehouses.  
                           - Staff and operate a RSS warehouse.  
                           - Coordinate, track, and maintain medical material inventory and recommend additional material.  
                           - Transport SNS assets to LPHDs and treatment facilities in accordance with local PHEP.  
                           - Coordinate public health public information activities related to the SNS. |
| **Medical Systems**     | *Isolation and quarantine, environmental health, and vector control* |
## Agency Functions

<table>
<thead>
<tr>
<th>Agency</th>
<th>Functions</th>
</tr>
</thead>
</table>
| Agency | • Triage and hospital pre-treatment  
  o Monitor numbers and case status of triaged patients statewide using data provided by LPHDs.  
  o Provide to clinicians and health departments:  
    ▪ Statewide current epidemiological information on any infectious disease outbreak or incident  
    ▪ Case definitions and supplemental documentation  
    ▪ Consultation  
    ▪ Coordination of activities if multiple local jurisdictions or state agencies are involved  
  o Report to federal and to other state agencies as necessary.  
  o Provide assistance and support to LPHDs in public health emergencies where local transportation resources are not sufficient to meet identified needs.  
  o Work with state agencies, including WEM, to identify a resource list of such services that may be used in support of local public health emergencies.  
  o Develop medical mutual aid agreements for medical facilities and equipment.  
  o Develop plans to identify staff (including volunteers) and equipment resources to operate alternate care facilities.  
  o Develop plan to restrict access and secure healthcare and surge facilities.  
  o Ensure emergency system patient transport and tracking systems (such as WI TRAC) are interoperable with national and Department of Defense systems.  
  o Assess and track health and medical resources at the state, regional, and local levels, including but not limited to:  
    ▪ Trauma centers  
    ▪ Burn centers  
    ▪ Pediatric facilities  
    ▪ Acute care facilities  
    ▪ Other specialty facilities  
  o Identify and coordinate with public safety access points that have enhanced capabilities and redundancy, and are capable of handling a surge in call volume. |
|     | • Medical surge  
  o Develop medical mutual aid agreements for medical facilities and equipment.  
  o Develop plans to identify staff (including volunteers) and equipment resources to operate alternate care facilities.  
  o Develop plan to restrict access and secure healthcare and surge facilities.  
  o Ensure emergency system patient transport and tracking systems (such as WI TRAC) are interoperable with national and Department of Defense systems.  
  o Assess and track health and medical resources at the state, regional, and local levels, including but not limited to:  
    ▪ Trauma centers  
    ▪ Burn centers  
    ▪ Pediatric facilities  
    ▪ Acute care facilities  
    ▪ Other specialty facilities  
  o Identify and coordinate with public safety access points that have enhanced capabilities and redundancy, and are capable of handling a surge in call volume. |
|     | • Mass Fatality Management  
  o Upon request from the coroner/medical examiner office (CMEO), provide, through the DPH Office of Health Informatics/Vital Records Section:  
  o Assistance to county CMEO, funeral directors, and local vital registrars with designing and testing county mass fatality mortuary plans (CMFMP) to ensure effective, safe, and humane:  
    ▪ Recovery and identification of bodies  
    ▪ Determination of cause and manner of death  
    ▪ Collection of forensic evidence, including information relevant to determining the source of biological contamination in a bioterrorism, other infectious disease outbreaks and other public health threats and emergencies (BOIDOOPHTE) incident  
    ▪ Notification of next of kin  
    ▪ Emergency disposition of bodies to prevent spread of disease  
    ▪ Release of bodies for final disposition  
    ▪ Availability of critical incident debriefing for all mortuary workers  
    ▪ Completion of legal death-related documents  
    ▪ Communications between the CMEO and federal, state, and local ...
Agency | Functions
--- | ---
**government agencies and with the family assistance center (if applicable)**
- On-site or remote intra-incident assistance to the CMEO, funeral directors and local vital records registrars
- Support in the development and maintenance of collaborative agreements statewide to provide mass casualty response capabilities
- Provide a web-based communications platform to connect the CMEO with other state agencies (through various public health and hospital emergency alerting systems).
- Provide CMEOs with information on how to detect the possibility of a BOIDOOPHTE-related death.
- Provide CMEOs with information on best practices for safe handling of confirmed or suspected contaminated human remains (specific to the type of contamination).
- In the event of a mass fatality incident so large that decomposition of human remains becomes a public health risk, notify the CMEO if the Communicable Disease Chief Medical Officer determines that the statutory 48-hour waiting period for cremation can be waived to prevent the spread of communicable disease or other biohazard under provisions of Wis. Stat. § 979.10.

**Wisconsin Emergency Assistance Volunteer Registry (WEAVR)**
- Administer, maintain, and promote the database of health care and behavioral health professionals.
- Deploy volunteers, in coordination with ESF 7, as needed in support of ESF 8 activities.

</thead>
</table>
| **Department of Agriculture, Trade and Consumer Protection** | • Provide food safety experts to monitor and assure safe food sources. Collect and analyze samples, establish holds and embargoes, and recall agricultural products.  
• Provide surveillance for disease in livestock and zoonotic (i.e., communicable between animals and humans) diseases in household pets, livestock, and wild animals.  
• Provide veterinary expertise as appropriate to local communities.  
• Quarantine and order destruction of animals affected with, or exposed to, communicable disease, as appropriate.  
• Address agricultural chemical spills by collecting and testing samples.  
• Assist with coordinating household pet and livestock staging areas (e.g. transportation, identification, triage, veterinary care, animal sheltering).  
• Work with DNR on animal carcass disposal and waste management issues (e.g. animals, animal waste, agriculture chemicals).  
• Assist with coordinating the deployment of federal and state resources (e.g. Veterinary Medical Assistance Teams, Wisconsin Animal Response Corps) to care for and treat animals.  
• Assist DNR with evaluating environmental impact.  
• Work with the WI DHS to ensure a safe food and water supply. Inspect, sample, |

</table>
| test, and evaluate local food and water sources to ensure product safety or proper disposal. | • Obtain and verify information regarding the impact of the disaster on the health of animals and provide needed services to the community.  
• Provide food safety, agriculture resource management, and animal health advice. Assist with providing animal care to farmers and household pet owners.  
• Assist with monitoring the long-term effects of an agriculture emergency on the environment. |
| **Department of Natural Resources** | • Provide technical advice and assistance regarding environmental issues at the request of local government and state agencies or if there is an immediate threat to safety (e.g. issues arising from natural disasters, chemical, or biologic threats).  
• Provide personnel and specialized equipment (e.g. air monitoring, water quality monitoring, water sampling kits; heavy equipment for fire fighting, pumps, engineers, and hydrologists).  
• Provide an after-hours Duty Officer (DO) system and share a 24-hour emergency hotline number with WEM.  
• Work with public agency and private response personnel to address any environmental threats.  
• Provide technical information and assistance on domestic and wild animal health issues.  
• Provide technical assistance with obtaining the appropriate permits needed to remove and dispose of disaster debris (e.g., animal carcasses).  
• Assist with monitoring the long-term effects of a disaster on the environment. |
| **Department of Military Affairs/Wisconsin Emergency Management** | • Coordinate with state and local agencies to identify and implement appropriate protective actions.  
• Through ESF 15, coordinate with WI DHS to issue public information regarding health-related alerts and protective actions.  
• Coordinate with federal and private (e.g. forensic dentists, Wisconsin Funeral Directors’ Association, State Coroners Association) organizations to support local health, medical, and mortuary needs.  
• Provide an after-hours DO system and share a 24-hour emergency hotline number with DNR. |
| **Department of Military Affairs/Wisconsin National Guard** | • Support SNS response activities, as requested. |
| **Wisconsin State Laboratory of Hygiene** | • Maintain a plan for collaborative emergency response with:  
  o LPDH laboratories  
  o Wisconsin Veterinary Diagnostic Laboratory  
  o Department of Agriculture, Trade & Consumer Protection Bureau of Laboratory Services  
  o State Crime Laboratory  
• Perform testing of emergency-related specimens; in cases where the WSLH does not have the required testing capability, locate laboratories with the testing capability and facilitate specimen transport and testing at those laboratories.  
• Provide ongoing information and guidance to sentinel laboratories regarding their roles and responsibilities, specimen collection, testing and transport, and laboratory safety.  
• Provide written instructions on specimen collection and proper packing and

IV. Supporting Documents

IV.A. Agency-Specific Plans and Procedures

IV.A.1. Public Health Emergency Plan

a) Describes systems for response to:

(1) *Bioterrorism, other infectious disease outbreaks and other public health threats and emergencies (BOIDOOPHTE)*

(2) *Chemical, biological, radiological, nuclear, and explosive (CBRNE) incidents*

b) Identifies the necessary structure to allow the participants to call upon outside resources
c) Provides for the protection of health care providers, emergency responders, and residents in the incidence of a natural or unnatural outbreak of an infectious disease

d) Provides authority and powers for local public health departments to request interstate mutual aid through Wis. Stat. § 66.0312

IV.A.2. Wisconsin Hospital Emergency Plan

a) Establishes a structure and process for meeting community healthcare needs when an individual institution’s capacity is exceeded (e.g., medical surge, burn plan)

b) Integrates community emergency response plans developed by civil authorities with an emphasis on integrating pre-hospital, hospital, and home care (e.g. triage, transfer, protocols, via WI-TRAC)

c) Provides a method for pre-determined initiating triggers, pre-hospital communication, resource mobilization, and transportation to the appropriate hospital(s) and off-site treatment facilities

d) Provides mutual aid with other participant institutions and community, regional, state, or national resources as required

e) Provides a method to evacuate partially or fully any participant institution (e.g. evacuation plan, evacuation template)

f) Determines when the response to an incident may be terminated and hospital activities returned to normal

IV.A.3. Wisconsin Pandemic Influenza Operational Plan

a) Ensures public health continuity of operations during each phase of a pandemic

b) Ensures surveillance and laboratory capability during each phase of a pandemic

c) Implements community mitigation interventions

d) Acquires and distributes medical countermeasures

e) Ensures mass vaccination capability during each phase of a pandemic

f) Ensures communication capability during each phase of a pandemic

a) Provides for the capability to effectively perform scene documentation, including:

   (1) Transportation, storage, documentation, and recovery of forensic and physical evidence

   (2) The complete collection and recovery of the dead, victims’ personal effects, and items of evidence

   (3) Determination of the nature and extent of injury

   (4) Identification of the fatalities using scientific means

   (5) Certification of the cause and manner of death

b) Addresses decontamination of remains and personal effects (if required)

c) Provides for the development and maintenance of collaborative agreements state-wide to provide these services in mass casualty incidents
IV.A.5. Strategic National Stockpile Plan (SNS)

Provides for the redistribution of federal assets of the SNS to LPHDs, tribal health centers, and medical treatment facilities in response to bioterrorism or other public health emergencies.

Wisconsin Emergency Response Plan
Search and Rescue

Intentionally Left Blank
I. Introduction

I.A. Purpose

I.A.1 This ESF provides insight and guidance for state agencies in the deployment and employment of state, tribal, federal, and private agency resources for search and rescue (SAR) and urban search and rescue (US&R) incidents.

I.B. Scope

I.B.1 ESF 9 covers two similar, but distinctly different, missions:

a) **Search and Rescue (SAR)**, involves locating, extricating, evacuating, providing medical care for, and reuniting persons in distress or imminent danger from a variety of environmental or man-made causes.

   (1) **Ground SAR** involves operations on land or inland waterways.

   (2) **Air-Sea-Rescue** involves operations in or over waterways including the Mississippi River and the Great Lakes using boats, fixed and rotary wing aircraft, underwater diving equipment, and other specialized resources.

   (3) **Mountain and Wilderness Rescue** involves operations in mountainous or wilderness areas where rescuers must traverse unimproved areas presenting dangers and hazards not normally encountered in inhabited areas. Mountain and wilderness rescue often involves specialized equipment, ropes, and harnesses for the safety of both rescuers and victims.

b) **Urban Search and Rescue (US&R)**, involves the location, rescue, extrication, and initial medical stabilization of victims trapped in confined spaces. Structural collapse is most often the cause of victims being trapped, but victims may also be trapped in transportation accidents, mines, and collapsed trenches. Urban Search and Rescue is considered a "multi-hazard" discipline as it may be needed for a variety of emergencies or disasters, including earthquakes, hurricanes, typhoons, storms and tornadoes, floods, dam failures, technological accidents, terrorist activities, and hazardous materials releases. US&R Task Forces are also trained and

</tbody>
</table>
qualified to perform or manage wide-area searches and provide general incident support.

I.B.2 Technical Rescue may play a role in both SAR and US&R missions and involves the use of tools and skills beyond those normally employed by first responders. Technical rescue disciplines include, but are not limited to, rope rescue, confined space rescue, cave rescue, trench and excavation rescue, swift water rescue, ski and avalanche rescue, and underwater rescue.

I.B.3 ESF 9 encompasses incidents where senior elected officials, emergency managers, or local incident commanders request state level assistance in obtaining, managing, coordinating, deploying, or employing resources including:

a) Fixed and rotary wing aircraft

b) Specialized equipment including radar, sonar, thermal and infrared imaging, specialized vehicles, and other equipment.

c) Specialized teams such as Wisconsin Taskforce 1, urban search and rescue teams, collapse teams, dive teams, mountain and wilderness SAR teams, K9 SAR teams, and other specialized teams.

d) Public Safety Unmanned Aircraft Systems (UAS)

I.B.4 Ancillary search and rescue mission support is provided through the appropriate ESF including:

a) ESF 2 for communications support

b) ESF 6 for survivor care and housing support

c) ESF 7 for identifying resources

d) ESF 8 for survivor medical care beyond that provided by ESF 9

e) ESF 13 for mission security support, if needed

I.C. Policies

I.C.1 No provision of this ESF is to create an obstruction to prompt and effective SAR actions by any agency to assist persons in distress.

I.C.2 Counties, tribes, and local jurisdictions are responsible for SAR and US&R within their respective jurisdictions.

I.C.3 WEM is the state SAR/US&R coordination center. When requested by appropriate authorities, WEM supports requests for state, tribal, federal, privately owned, and Voluntary Organizations Active in Disaster (VOAD) resources.

I.C.4 WEM coordinates interstate and international SAR and US&R resource requests through:

a) The Supplemental Interstate Agreement for Emergency Mutual Assistance between the State of Wisconsin and the State of Minnesota

b) The Emergency Mutual Aid Compact (EMAC)

c) The State and Province Emergency Management Assistance Compact

d) FEMA Region V

e) Air Force Rescue Coordination Center
Wisconsin Emergency Response Plan

Search and Rescue

f) US Coast Guard Rescue Coordination Center - Cleveland

I.C.5 SAR or US&R resources recognized by WEM should be appropriately trained and credentialed in accordance with the standards of the National Incident Management System (NIMS) or Wisconsin Credentialing & Asset Management (WICAMS) guidelines.

a) SAR/US&R resource identification, credentialing, and training:

(1) FEMA 508-8 Search and Rescue sets credentialing standards for SAR/US&R teams.

(2) Wisconsin Regional Emergency All-Climate Training (REACT) Center provides training curricula and facilities for SAR and US&R teams.

b) WEM provides credentialing guidelines for Wisconsin-based SAR and US&R teams.

II. Concept of Operations

II.A. Mobilization Triggers

II.A.1 WEM activates ESF 9 whenever county, tribal, or local jurisdictions request state level support because locally available SAR or US&R resources are likely to be exhausted or there is a need for specialized equipment or personnel not available in that jurisdiction.

II.B. Organization

II.B.1 WEM coordinates with state agencies, VOAD organizations, private sector partners, neighboring states, and the federal government to obtain requested SAR and US&R resources.

II.B.2 Air Coordination Group: The Air Coordination Group meets to ensure aerial SAR operations are safe, effective, and efficient. Air Coordination Group members participate in a coordination call hosted by the WEM Duty Officer (DO) or SEOC whenever aerial SAR operations are needed throughout the state. The following agencies are part of the Air Coordination Group:

a) Wisconsin Emergency Management (WEM)

b) Wisconsin National Guard (WING)

c) Wisconsin Department of Natural Resources (DNR)

d) Wisconsin Task Force 1 (WI TF1)

e) Wisconsin State Patrol (WSP)

f) Wisconsin Wing Civil Air Patrol (WI Wing CAP)

g) Wisconsin Department of Administration - Capitol Police (DOA/CapPD)

II.B.3 Specific procedures for mobilizing SAR and US&R resources are contained in the WEM DO Manual and the State of Wisconsin Aviation Operations Guidelines.

II.B.4 SAR and US&R teams recognized by WEM:

a) Wisconsin state level SAR and US&R resources:

(1) Air SAR and US&R resources:
Wisconsin Emergency Response Plan

Search and Rescue

(a) WING: Fixed and rotary wing aircraft
(b) DNR: Fixed wing aircraft with specialized SAR equipment
(c) WSP: Fixed wing aircraft with specialized SAR equipment
(d) Capitol Police: Public safety unmanned aircraft systems (UAS)
(e) WI Wing CAP: Fixed wing aircraft with specialized SAR equipment

(2) Ground SAR and US&R resources:
(a) WI-TF1: SAR/US&R teams from various municipalities throughout Wisconsin serving under contract as a WEM (state) resource
(b) WING: US&R ground search team
(c) DNR: Ground search teams
(d) WSP: Ground search teams
(e) WI Wing CAP: Ground search teams
(f) Non-governmental specialized search and rescue resources:
   (i) K9 SAR teams located throughout Wisconsin

b) Federal government resources:
   (1) US Army Corps of Engineers US&R program
   (2) U.S. Coast Guard fixed and rotary wing aircraft and boats for searches in the Great Lakes

II.C. ESF Activities

The WERP Basic Plan defines standardized tasks that constitute prevention, protection, mitigation, response, and recovery responsibilities of any agency that serves a role in emergency management. This section defines those activities unique to ESF 9, and is intended for use in conjunction with the common tasks outlined in the WERP Basic Plan.

WI/MN Mutual Assistance Agreement
SUPPLEMENTAL INTERSTATE AGREEMENT FOR 
EMERGENCY MUTUAL ASSISTANCE BETWEEN 
THE STATE OF WISCONSIN AND 
THE STATE OF MINNESOTA

WHEREAS, the State of Wisconsin and the State of Minnesota have determined that interstate emergency mutual assistance is beneficial and often necessary in responding to emergencies and disasters; and

WHEREAS, both States have enacted Emergency Management Assistance Compacts ("EMAC") which provide the framework for sharing resources when a governor declares a state of emergency; and

WHEREAS, situations exist that do not rise to the level of a governor declared state of emergency, but where significant benefits exist to sharing state resources; and

WHEREAS, the EMAC does not specifically address interstate assistance for situations where the governor of the state requesting assistance has not declared a state of emergency; and

WHEREAS, the EMAC specifically allows and encourages supplemental agreements between Party States, including the use of Intergovernmental Agreements to deploy local assets under this agreement

NOW THEREFORE, the Governor of the State of Wisconsin pursuant to the statutory authority granted under §166.03(1)(b)2. of the Wisconsin Statutes, and the Governor of the State of Minnesota, pursuant to statutory authority granted under sec. 12.21, subd. 2 and 12.27 subd. 2 of the Minnesota Statutes, each Governor acting for and on behalf of their State respectively, hereby agree as follows:

1. The State of Wisconsin hereby promises and agrees to provide emergency mutual aid assistance to the State of Minnesota when the State of Minnesota requests such assistance, notwithstanding the absence of a declaration of emergency or disaster by the State of Wisconsin or the State of Minnesota.

2. The State of Minnesota hereby promises and agrees to provide emergency mutual aid assistance to the State of Wisconsin when the State of Wisconsin requests such assistance, notwithstanding the absence of a declaration of emergency or disaster by the State of Wisconsin or the State of Minnesota.

3. Neither State shall be required to provide resources under this agreement if, in the sole discretion of the State providing assistance ("Responding State"), the requested
resources are not sufficiently available, or if the commitments of those resources to the State requesting assistance ("Requesting State") would unreasonably impact the safety and health of the citizens of the Responding State.

4. The Responding State shall be reimbursed by the Requesting State for any loss, damage, costs, compensation of personnel, or other expenses incurred as a result of its response to a request for aid under this agreement. Notwithstanding this provision, the Responding State may elect to assume and not invoice the Requesting State in whole or in part for such loss, damage, cost, compensation of personnel, or other expenses, and/or may donate such services or loan equipment to the Requesting State without charge, costs or financial obligation.

5. The officers, employees or agents of the Responding State who provide assistance to the Requesting State pursuant to this agreement shall be protected from liability under the laws of the State in which the cause arose. Officers, employees or agents of the Responding State shall be considered agents of the Requesting State for tort liability and immunity purposes. The Responding State, and its officers, employees or agents rendering aid, shall not be liable on account of any act or omission performed in good faith on the part of its officers, employees or agents while engaged in rendering interstate mutual assistance under this agreement or in connection with the maintenance or use of any equipment or supplies in connection with the rendering of aid. "Good faith" shall not include willful, wanton or reckless misconduct.

6. Each State shall provide their responding officers, employees and agents with compensation and death benefits, including worker's compensation, as appropriate and authorized for any injured responder or the representative of a deceased responder, deployed under this agreement in the same manner as if the injury or death occurred within the Responding State.

7. When a responding officer, employee or agent holds a license, certificate, or other permit issued by the Responding State evidencing the meeting of qualifications for professional, mechanical, or other skills, and when such assistance is requested by the Requesting State, that responder shall be deemed licensed, certified, or permitted by the Requesting State to render aid involving such skill, subject to any limitations and conditions as the Requesting State may prescribe.

8. This agreement shall be implemented and tracked through the authorized Emergency Management agency in the Party States.

9. If aid has been sent under this Agreement and later an emergency is declared by the Receiving State and similar aid is requested under EMAC, the terms of EMAC shall prevail over any inconsistency with this Agreement commencing with the time of the EMAC request.

10. Notwithstanding the foregoing, either State may terminate this agreement with a thirty (30) day written notice to the other State.
11. If any provision of this Agreement is declared by a court to be illegal or in conflict with any law, the validity of the remaining terms and provisions shall not be affected. The rights and obligations of the Party States shall be construed and enforced as if the Agreement did not contain the particular provision held to be invalid.

IN WITNESS THEREOF,
I, Jim Doyle, Governor of State of Wisconsin, have hereunto set my hand and caused the Great Seal of the State of Wisconsin to be affixed this 6th day of Nov, 2009.

## I. Introduction

### I.A. Purpose

ESF 10 describes the coordinated state response providing support to local and tribal governments when responding to a natural or manmade, actual or potential release of chemical or biological materials. This includes a response to an actual or potential release of hazardous materials (hazmat) resulting from a transportation incident, fixed facility incident, natural disaster, or terrorist attack. It also describes the state response to serious hazmat incidents that are not defined as disasters. ESF 10 promotes coordination between federal, state, tribal, and local governments, as well as the private sector, when responding to these types of incidents.

Radiological hazardous incident response is not a part of this ESF but is addressed in the Radiological Nuclear Annex of the WERP.

### I.B. Scope

I.B.1 ESF 10 describes the lead coordination roles and responsibilities among state agencies. It is applicable to all state departments and agencies with statutory responsibilities and assets to support state, local, and tribal response to actual or potential oil or hazardous materials incidents.

I.B.2 State agency response actions are determined by specific state statutes, state agency plans, and policies. Appropriate response and recovery actions can include efforts to detect, identify, contain, clean up, or dispose of released oil and hazardous materials.

I.B.3 The term hazardous material is synonymous with hazardous substances. Hazardous materials are those materials, wastes, substances, and mixtures that are inclusive with the definition of “hazardous substance” as provided under the Clean Air Act, Title 40, Code of Federal Regulations.
I.B.4 The legal definition of a hazardous substance and hazardous waste is found in §292.01(5) and §299.01(6) of the Wisconsin Statutes, while hazardous substance spills is defined in §292.11 of the Wisconsin Statutes.

I.C. Policies

I.C.1 The DNR is authorized by § 23.09(4) of the Wisconsin Statutes to provide support to local and tribal governments and is the lead state agency for hazmat incidents on federal, state, county, and tribal lands, unless it involves agricultural chemicals.

I.C.2 The DATCP is the lead agency when the substance is an agricultural chemical. DATCP will respond consistent with § 94.73 of the Wisconsin Statutes and the Memorandum of Understanding, titled “Discharge of Hazardous Substances, March, 2005,” with DNR.

I.C.3 Wis. Stat. § 254.02 names DHS as “the lead state agency for health risk assessment”. Wis. Stat. § 254.02 also directs DHS to “assess the acute and chronic health effect from occupational or environmental human health hazards exposure” and for state agencies and local health departments to “report known incidents of environmental contamination to the department”.

I.C.4 Incidents are managed utilizing the Incident Command System (ICS) and function using the Unified Command System.

I.C.5 The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) requires that a release of oil and hazardous materials be reported to the National Response Center (NRC) as specified in Title 40, Code of Federal Regulations.

I.C.6 The request for local fire resources is accomplished through the use of local/county dispatch, automatic aid, mutual aid and/or the activation of the Mutual Aid Box Alarm System—Wisconsin (MABAS WI) once local resources are exhausted.

I.C.7 For the purposes of this ESF, the term ‘Local/County Hazmat Team’ means ‘Local Emergency Response Team’ as defined in Wis. Stat. § 323.70(1)(c).

II. Concept of Operations

II.A. General

In the event of an actual or potential release of hazardous materials in the state, which presents a threat to public health and safety or the environment, this ESF or portions of it may be implemented. ESF 10 provides for a coordinated response to discharges and releases of hazardous materials by committing the needed resources to the impacted area through various local, state and federal agencies.

II.B. Organization

II.B.1 Emergency scene management shall be in accordance with the ICS.

II.B.2 The DNR, as the responsible agency for implementing ESF 10, will respond directly to the SEOC and report to the SEOC manager or WEM Duty Officer if the SEOC has not been activated. If the incident involves agricultural chemicals, DATCP will be the lead agency, working within a unified command system with the DNR, based upon a Memorandum of Understanding (MOU) between these two agencies.
II.B.3 The DATCP has the authority to respond to agricultural chemical releases as specified in § 94.73 of the Wisconsin Statutes and the MOU with DNR.

II.B.4 At the request of the lead agency, the Multi-Agency Coordination (MAC) element will act as liaison between the local incident command, county EOC, and the SEOC in order to facilitate efficient resource allocation.

II.B.5 ESF 10 emergency operations will coordinate the resources of the DNR and other appropriate state agencies with the SEOC manager. In addition, DNR may request other resources from the EPA and USCG for the Great Lakes and Mississippi River, as needed.

II.B.6 The DNR coordinates with local and federal responders and provides implementation of the State Contingency Plan as specified in §292.11 of the Wisconsin Statutes and the EPA National Oil and Hazardous Contingency Plan (NCP).

II.B.7 The reporting of chemicals present at fixed facilities, planning, training, exercising, and hazmat team response are components of the Emergency Planning and Community Right-To-Know Act (EPCRA), as administered by WEM. Under EPCRA, it is the responsibility of the DNR to report spills to WEM.

II.B.8 WEM maintains a database of information pertaining to facilities that store hazardous chemicals and extremely hazardous substances (EHS) as well as the amounts and location of chemicals at each of those facilities. Each county in Wisconsin has a Local Emergency Planning Committee (LEPC) that addresses chemical hazards present at permanent facilities and on transportation routes.

II.B.9 EPCRA addresses the development of a comprehensive hazardous materials response plan. Planning for hazardous materials incidents is addressed in the County Wide/Strategic Plan (CW/SP), which is updated annually by each county. Offsite (OS) facility plans are a component of the CW/SP and address consequences should an EHS be released by a fixed facility and become a threat to the health and safety of the surrounding community and the environment.

II.B.10 Should additional resources be needed beyond the local capability, there are four Wisconsin hazardous materials response system taskforces comprised of 24 units (3 Type I teams, 9 Type II teams, and 12 Type III teams) contracted by WEM to respond to serious hazardous incidents. The closest responding hazmat unit will determine the level of response and will notify the WEM duty officer (DO). The responding hazmat unit is responsible for notifying the WEM DO that additional resources are requested.

II.B.11 There are approximately 40 designated local/county hazmat teams. Sixteen counties have contracted with neighboring counties and two have contracted with private clean-up contractors to respond to hazardous materials releases of a lesser nature. Local/county hazmat teams are contacted according to local response protocols.

II.B.12 There are private companies within the state with industrial fire brigades that have hazmat responsibilities within their company’s grounds. They may request assistance from the local/county hazmat team or the Wisconsin Hazardous Materials Response System, as appropriate.

II.B.13 Disposal of hazardous materials waste may be handled by a licensed, private clean-up contractor, with the responsible party liable for the costs of the response, removal, and remediation of the affected area.
II.B.14 WEM coordinates, through the SEOC, the assistance that may be provided by volunteer groups or resources, or both, in support of the functions of this ESF (see ESF 7).

II.C. Mobilization Triggers

II.C.1 Mobilization of a state or local hazmat team is predicated on the size or complexity of a hazardous materials incident (e.g., an incident that exceeds the capabilities available using local resources).

II.C.2 Local authorities request state assistance for an incident in their jurisdiction.

II.D. ESF Activities

The WERP Basic Plan defines standardized tasks that constitute the prevention, protection, mitigation, response and recovery responsibilities of any agency that serves a role in emergency management. This section defines those activities that are unique to ESF 10 and is intended to be used in conjunction with the common tasks outlined in the WERP Basic Plan.

Table 2: Prevention, Protection, and Mitigation Activities

<table>
<thead>
<tr>
<th>Phase</th>

### III. Agency Responsibilities

#### III.A. Lead Coordinating Agency – Wisconsin Department of Natural Resources

III.A.1 For all discharges involving agricultural chemicals see subsection III.B.

<table>
<thead>
<tr>
<th>Agency</th>
<th>Functions</th>
</tr>
</thead>
</table>
| Department of Natural Resources: | • Minimize damage/impact to natural resources and the environment.  
• Serve as the lead agency for the response to oil and hazmat incidents and hazardous substance releases, except for agricultural chemicals (See DATCP authority below).  
*Should the hazardous materials incident be related to an act of terrorism, the Department of Justice or a Federal agency may be the lead agency. See Terrorism Annex.*  
• Serve as lead agency for offsite cleanup of hazardous materials or wastes.  
• Monitor state waters suspected of contamination due to an emergency or disaster situation.  
• Provide staff support to the SEOC and local jurisdictions during an emergency or disaster situation, as necessary.  
• Provide assistance for the identification, containment, removal, and disposal of oil, hazardous materials, or other contaminants that could affect the public health or the environment.  
• Coordinate with federal and state agencies, as appropriate.  
| DNR | DMA/WEM | DHS | Local | DNR | DATCP | DHS | DMA/WEM | DNR |
### III.B. Wisconsin Governmental Support Agencies

#### Table 6: State Government Support Agencies Functions

<table>
<thead>
<tr>
<th>Agency</th>
<th>Functions</th>
</tr>
</thead>
</table>
| **Department of Agriculture, Trade & Consumer Protection** | - Serve as the lead agency for the response to discharges or potential discharges of agricultural chemicals.  
- Implement the agriculture chemical cleanup program for assisting in the response to releases of agricultural chemicals.  
- Provide assistance for the identification, containment, removal, and disposal of the chemical(s) or other contaminant(s) that could affect public health or the environment.  
- Respond, through the Toxic Response Team, to the deaths of food production animals associated with suspected discharges of hazardous or unknown materials.  
- Provide a public consumer protection hotline for information relating to the discharge of an agricultural chemical, during an emergency.  
- As specified in ESF 11, serve as the lead agency for response to a food product that may be contaminated by a hazardous substance.  
- Provide outreach and recovery assistance through the Wisconsin Farm Center to farmers affected by release of hazardous substances.  
- Serve in the SEOC and provide assistance to DNR for DNR-lead events that may have an impact on agricultural activities.  
- Provide support to other agencies and the public during an emergency to ensure that consumers are protected from unfair practices (e.g., gas gouging, etc.)  
- Provide laboratory analyses, through the DATCP Bureau of Laboratory Services, of unknown materials or hazardous substances as part of an investigation, especially as it relates to food, feed, or other consumer products.  
- Issue stop sale and movement orders on materials that may be considered hazardous substances per §100.37 of the Wisconsin Statutes.  
- Review DATCP-required emergency response plans at agricultural chemical facilities. |
| **Department of Health Services** | - Work with federal, state, and local agencies (e.g. public health, human services, social services, environmental, others) and health care providers to assess and communicate the potential health, psychological, and social impacts regarding releases or threatened releases of oil and hazardous materials to the environment.  
- Provide technical assistance and guidance on public health issues, including: evacuation and re-entry decisions; clean-up; mitigation; field sampling and monitoring; and human health assessments.  
- In collaboration other state and local agencies, develop and provide public messaging, including: fact sheets; message maps; and media releases. |
| **Department of Justice** | - Provide state fire marshals who will assist in the investigation of fires or explosions related to the release of hazardous materials to determine cause and origin.  
- Provide crime scene and lab services to assist in the investigation of an incident, particularly should there be a possible terrorist link.  
- If the incident is determined to involve a criminal or terrorist act, staff will assist in the investigation of the incident. |
| **Department of Transportation** | - Coordinate assistance with other state agencies, as requested.  
- Assist with traffic control providing personnel and materials, as required.  
- Arrange for specialized equipment such as front-end loaders, backhoes, and materials such as sand to create emergency containment areas or dikes. |
### Wisconsin Emergency Response Plan

**Oil & Hazardous Materials**

<table>
<thead>
<tr>
<th>Agency</th>
<th>Functions</th>
</tr>
</thead>
</table>
| **Department of Transportation:** Wisconsin State Patrol | • Assist with security, traffic control, and law enforcement support in coordination with local law enforcement.  
• Provide truck inspectors who are trained to respond to an incident involving the release of a hazardous material and who can enforce federal motor carrier laws on the transportation of hazardous materials.  
• Provide aerial reconnaissance of the affected area. |
| **Department of Military Affairs:** Wisconsin Emergency Management | • Dispatch hazmat coordinator, fire services coordinator, and regional directors to establish contact with local jurisdictions, as necessary.  
• Establish and maintain direct communication and coordination with local governments affected by the emergency or disaster situation.  
• Coordinate assistance with other state agencies as requested by DNR.  
• Coordinate with federal agencies in accordance with ESF 5.  
• Coordinate with the Wisconsin Hazardous Materials Response System to assist county teams, when appropriate. |
| **Department of Military Affairs:** Wisconsin National Guard | • Provide liaison to SEOC, local EOC and Incident Command Post (ICP), as necessary.  
• Upon activation, provide support in the following areas:  
  o Support to law enforcement:  
    • *Traffic control, road block and check points*  
    • *Quarantine enforcement*  
    • *Site security and critical infrastructure protection*  
    • *Presence patrol*  
    • *Hazardous Chemical Identification*  
  o Transportation  
    • *Air & Ground*  
  o Medical  
    • *Transport*  
    • *Limited treatment*  
  o Engineer  
    • *Debris clean-up*  
    • *Structure stabilization*  
    • *Damage assessment*  
• Questions or requests for assistance should be directed to the WEM DO or the SEOC, when it is staffed. |

<td>• DNR may utilize the services of organized volunteers as appropriate to their training or skills.</td>
</tr>
</tbody>
</table>
III.D. Federal Support and Interface

Federal assistance is available from the U.S. Department of Homeland Security (US DHS), the EPA, the U.S. Department of Justice (US DOJ), and other federal agencies identified through the National Response Framework (NRF), ESF 10. Federal assistance, if provided, will be coordinated through the SEOC. The SEOC will be kept current on all issues involving the use of federal resources.

I. Introduction

I.A. Purpose
To coordinate state and federal activities in support of local, county, and tribal authorities’ response to an incident involving agriculture, food, and natural or cultural resources.

I.B. Scope

I.B.1 Control and eradicate or manage foreign animal diseases (including infectious, non-infectious, and zoonotic diseases), exotic plant diseases, and pest infestation.

I.B.2 Respond to contamination from agrichemicals and investigate unexplained food-chain animal deaths through an integrated Toxic Response Team.

I.B.3 Ensure food safety and work with industry to provide adequate food supplies during an emergency.

I.B.4 Provide nutrition assistance

I.B.5 Provide support for ensuring the safety and well-being of household pets and large animals.

I.B.6 Protect natural and cultural resources and historic properties (NCH) resources prior to, during, and after a disaster.

I.B.7 Provide financial advising, counseling vouchers, and producer mediation and arbitration services.

I.B.8 Provide technical assistance and administer grants for soil and water conservation and other engineering practices.
I.C. Policies

I.C.1 The DATCP, in accordance with Chapters 93, 94, 95, and 97 of the Wisconsin Statutes:
   a) Has broad authority to:
      (1) Investigate and control animal diseases
      (2) Investigate and eradicate plant infestations and exotic pest species
      (3) Ensure the safety of our food supplies through inspections and other activities under DATCP authorities
      (4) Respond to agrichemical releases
      (5) Provide assistance to producers on conservation and engineering practices
      (6) Provide producers with various types of business assistance
   b) May:
      (1) Test animals
      (2) Impose quarantines on diseased plants and animals
      (3) Regulate imports and movement of animals and plants

I.C.2 The DNR, in accordance with Chapters 1, 23, 29, 95, 254, 283, 285, 289, and 291 of the Wisconsin Statutes:
   a) Has authority for:
      (1) Natural resources
      (2) Wildlife that may be affected by a foreign animal disease
      (3) Environmental regulations for activities conducted as part of ESF 11, including carcass management and incineration
   b) Establishes statewide soil and water conservation standards

I.C.3 The Wisconsin Historical Society is authorized under §§ 44.24, 44.29, 44.40, and 157.70, Wis. Stats. to:
   a) Serve as the principal historic preservation agency of the state
   b) Identify historic and archeological sites
   c) Review state or federal funded, licensed, and permitted activities that affect cultural and historic properties
   d) Protect human burials from disturbance

I.C.4 The WI DHS in accordance with Chapters 250, 252, and 254 of the Wisconsin Statutes:
   a) Has general powers and duties including:
      (1) General supervision throughout the state of the health of citizens
      (2) Execute what is reasonable and necessary for the prevention and suppression of disease
Investigate the cause and circumstances of any special or unusual disease or mortality

b) For communicable diseases the department may require:

1. Isolation of patients
2. Quarantine of contacts
3. Concurrent and terminal disinfection
4. Modified forms of these procedures

c) The department is the lead state agency for health risk assessment and shall:

1. Assess the acute or chronic health effect from occupational or environmental human health hazards

   (a) State agencies and local health departments shall report known incidents of environmental contamination to the department.

II. Concept of Operations

II.A. Mobilization Triggers

Mobilization triggers are specific actions that initiate DATCP’s emergency response procedures for the various emergency response and recovery categories.

<table>
<thead>
<tr>
<th>Division</th>
<th>Mobilization</th>
</tr>
</thead>
<tbody>
<tr>
<td>DATCP/Division of Animal Health</td>
<td>Agencies as a whole&lt;br&gt;• Rely on information from direct and indirect monitoring programs and on consumer/producer complaints as triggers for response.</td>
</tr>
<tr>
<td>DATCP/Division of Food and Recreational Safety</td>
<td>• Once a division has received individual complaints or results from direct and indirect monitoring that indicate a potentially significant issue, standard chain-of-command operating procedures are followed.</td>
</tr>
<tr>
<td>DATCP/Division of Agriculture Resource Management</td>
<td></td>
</tr>
<tr>
<td>DATCP/Division of Trade and Consumer Protection</td>
<td></td>
</tr>
<tr>
<td>DATCP/Division of Management Services</td>
<td>Agencies as a whole&lt;br&gt;• Provide secondary response services in support of other DATCP divisions.</td>
</tr>
<tr>
<td>DATCP/Division of Agricultural Development</td>
<td></td>
</tr>
</tbody>
</table>

The following list identifies which divisions mobilize for each response and recovery category:

II.A.1 Foreign animal and plant diseases and pest infestation: DATCP/Division of Animal Health (DAH), DATCP/Division of Agriculture Resource Management (DARM), DATCP/Division of Food and Recreational Safety (DFRS)

II.A.2 Agrichemical release and unexplained food chain deaths: DARM, DAH

II.A.3 Commercial food supply safety: DFRS, DAH

II.A.4 Nutrition assistance: DATCP/Division of Agricultural Development (DAD) (via Farm Center)

II.A.5 Animal disaster response: DAH, DARM
II.A.6 Protection of natural and cultural resources and historic resources: DARM, DAD (via Farm Center), DATCP/Division of Management Services (DMS)

II.A.7 Financial advising, counseling vouchers, and producer mediation and arbitration services: DAD (via Farm Center)

II.A.8 Soil and water conservation: DARM, DMS

II.B. Organization

II.B.1 ESF 11 emergency operations will coordinate the resources of DATCP and other supporting agencies and organizations with the State Emergency Operations Center (SEOC) manager and SEOC general staff.

II.B.2 DATCP may request other resources from local, tribal, other state or federal agencies, and private organizations, as needed.

II.B.3 For food- and agriculture-related emergencies, DATCP coordinates with local, tribal, state, and federal responders, private business, and non-governmental organizations, and provides for implementation of state response plans, as appropriate.

II.B.4 The DNR:
   a) Coordinates with local, tribal, state, and federal agencies for emergencies that may impact natural resources of the state, including threatened and endangered resources and species.
   b) Has authority over wildlife management and carcass management.

II.B.5 The Wisconsin Historical Society maintains responsibility for the protection of cultural and historical resources of Wisconsin.

II.B.6 Depending on the type of emergency, support agencies may work autonomously in providing their services.

II.C. ESF Activities

The WERP Basic Plan defines standardized tasks that constitute the prevention, protection, mitigation, response, and recovery responsibilities of any agency that serves a role in emergency management. This section defines those activities that are unique to ESF 11, and is intended to be used in conjunction with the common tasks outlined in the Basic Plan.

**Table 3: Prevention, Protection, and Mitigation Activities**

</tr>
<tr>
<td></td>
<td>o Voluntary organizations</td>
<td>DMA/WEM, WI VOAD</td>
</tr>
</tbody>
</table>
### Animal disaster response
- Coordinate support to local and volunteer operations for animals affected by a disaster
  - **Response**
    - Assessment
    - Search and rescue
    - Collection of stray animals
    - Evacuation and shelter, including tracking of evacuated household pets
    - Zoo and sanctuary animal issues
    - Veterinary medical care and assistance
    - Human health risks
  - **Recovery**
    - Reunification of animals and owners
    - Placement of abandoned animals
    - Disposal of animal carcasses

### Protection of natural, cultural, and historic (NCH) resources
- Provide timely notification of situations that pose potential threats to NCH resources to relevant agencies.
- Provide information on locations, operational status, sensitivity to disturbance, and potential threats to NCH resources under agency jurisdiction to WEM and other relevant state agencies.
- Work cooperatively to mitigate or eliminate threats to NCH resources from natural, technological, and human-caused hazards.

### Financial advising, counseling vouchers, producer mediation and arbitration services
- Facilitate access to Wisconsin Farm Center programs.
- Facilitate access to behavioral health counseling.

### Soil and water conservation assistance
- Facilitate access to and administer land and resource management programs and grants.
- Provide engineering and technical assistance to counties and producers, as needed.
- Ensure that environmental issues are appropriately addressed.

### III. Agency Responsibilities

#### III.A. Lead Agency – Department of Agriculture, Trade & Consumer Protection

**Table 6: Lead Coordinating Agency Functions**

<table>
<thead>
<tr>
<th>Agency</th>
<th>Functions</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>DATCP: Agency as a whole</strong></td>
<td>• Provide overall leadership, coordination, assessment, and technical assistance in response to:</td>
</tr>
<tr>
<td></td>
<td>o Foreign animal and plant diseases and pest infestations</td>
</tr>
<tr>
<td></td>
<td>o Animal disaster response</td>
</tr>
<tr>
<td></td>
<td>o Land and water conservation issues</td>
</tr>
<tr>
<td></td>
<td>o Agrichemical releases</td>
</tr>
<tr>
<td></td>
<td>o Plant, food, milk, and dairy product contamination</td>
</tr>
<tr>
<td></td>
<td>o Shortages of food supplies in large scale emergencies</td>
</tr>
<tr>
<td></td>
<td>• Collect samples, forward to an appropriate laboratory, and review sample analysis reports.</td>
</tr>
<tr>
<td></td>
<td>• Accumulate and assess contamination and disease information obtained from assessment teams, telecommunications industry, local emergency operations center, and other local, state, and federal agencies.</td>
</tr>
<tr>
<td></td>
<td>• Coordinate and track the movements of incident-related resources to and from staging areas, including evacuation from and re-entry to an incident site.</td>
</tr>
<tr>
<td></td>
<td>• Provide support agencies with current information concerning locations of disease or contamination outbreaks, extent of involvement, and available diagnostic information.</td>
</tr>
<tr>
<td></td>
<td>• Provide information on local agricultural conditions, resources, and producers.</td>
</tr>
<tr>
<td></td>
<td>• Through the DATCP Public Information Office (PIO) and in coordination with appropriate supporting agency PIOs:</td>
</tr>
<tr>
<td></td>
<td>o Provide accurate, consistent, and timely information to the public.</td>
</tr>
<tr>
<td></td>
<td>o Serve as a primary participant in a joint information center (JIC) if one is established.</td>
</tr>
<tr>
<td></td>
<td>o Integrate information from federal counterparts.</td>
</tr>
<tr>
<td></td>
<td>o Maintain contact with other states, through the Emergency Communications Plan developed by the Communication Officers of State Departments of Agriculture (COSDA).</td>
</tr>
<tr>
<td></td>
<td>• Work with the Wisconsin Agro-Security Resource Network (WARN) as the main industry organization in an emergency.</td>
</tr>
<tr>
<td></td>
<td>• Work with private industry in all agency response efforts, as appropriate, including ensuring adequate food supplies in large-scale emergencies.</td>
</tr>
<tr>
<td><strong>DATCP: Division of Animal Health</strong></td>
<td>• Investigate possible animal disease outbreaks.</td>
</tr>
<tr>
<td></td>
<td>• Issue quarantine and movement control orders on affected livestock and premises.</td>
</tr>
<tr>
<td></td>
<td>• Consult with stakeholders and partners on possible disease effects on livestock.</td>
</tr>
<tr>
<td></td>
<td>• Provide technical advice for disposal of diseased animal carcasses to minimize spread of disease.</td>
</tr>
<tr>
<td></td>
<td>• Deploy members of the Wisconsin Animal Response Corps, a Medical Reserve Corps unit established to respond to emergencies involving animals.</td>
</tr>
</tbody>
</table>
### DATCP: Agrichemical Management Bureau
- Respond to agrichemical spills and oversee clean-up work.
- Conduct investigations into food-chain animal deaths from unexplained causes to determine whether feed or agrichemical contamination has occurred.
- Direct the deployment and operations of the Toxic Response Team.

### DATCP: Division of Agriculture Development Wisconsin Farm Center
- Partner with other local and state agencies to provide recovery support with:
  - Assistance to disaster-affected agricultural businesses, including arbitration and mediation services
  - Vouchers for counseling

### DATCP: Land and Water Resources Management Program
- Provide staffing and cost-share grants to counties to support local land conservation.
- Administer:
  - Wisconsin Farmland Preservation program
  - Conservation Reserve Enhancement program
  - Nutrient Management program
  - Agricultural Impact Statement program
  - Livestock Facility Siting program
- Provide engineering and technical assistance to counties and producers, as needed.

### DATCP: Wisconsin Animal Response Corps
- Respond to local and state animal emergencies that exceed local or state capabilities, providing help with:
  - Animal care and treatment; vaccination
  - Rescue
  - Animal evacuation and sheltering
  - Animal mass casualty care
  - Specimen collection, decontamination, euthanasia, and necropsy
  - Other support activities

### III.B. Wisconsin Governmental Support Agencies

#### Table 7: State Government Support Agencies Functions

<table>
<thead>
<tr>
<th>Agency</th>
<th>Functions</th>
</tr>
</thead>
</table>
| Department of Health Services | • Provide overall leadership, coordination, assessment, and technical assistance for public health needs in the event of a disaster or emergency involving food and agriculture incidents.  
• Conduct human health risk assessments and provide health consultations for agrichemical emergencies and spills with human health implications.  
• Provide assistance and epidemiology services in dealing with zoonotic diseases (animal to people) and foodborne outbreaks linked to licensed food establishments and other facilities.  
• Provide nutrition assistance from the Emergency Food Assistance and FoodShare Programs.  
• Facilitate access to behavioral health support for survivors and emergency responders. |
### Agriculture & Natural Resources

<table>
<thead>
<tr>
<th>Agency</th>
<th>Functions</th>
</tr>
</thead>
</table>
| **Department of Natural Resources** | **For animal and plant diseases and pest infestations**  
- Provide containment and quarantine assistance to prevent the spread of foreign animal diseases to or through non-domesticated animals.  
- Provide assistance with vector control and location of cleaning and disinfecting stations.  
- Conduct surveillance on susceptible wild animal species, as appropriate.  
- Reduce infected wildlife populations, as appropriate.  
- Provide heavy equipment for disposal operations, as available.  
- Assist with the transportation of soil, carcasses or debris, as appropriate. |
| **For agrichemical responses** |  
- Provide technical and other assistance, as necessary. |
| **For protection of natural resources** |  
- Maintain inventory and location of sensitive natural resources information. |
| **Department of Public Instruction** |  
- Coordinate with the ARC to release USDA foods in a federally-declared disaster:  
  - For congregate feeding during a presidentially declared disaster, release USDA foods as long as available and needed.  
  - For household feeding during a presidentially declared disaster, release USDA foods only with prior approval from the USDA and per extent and length of time as determined by the USDA.  
- Coordinate with the ARC for release of USDA foods in the absence of a federal declaration, but when ESF 6 determines circumstances warrant USDA foods distribution (defined in accordance with 7 CFR 250.3 as *Situations of Distress*):  
  - For congregate feeding during a situation of distress involving a natural event, release USDA foods to the extent that USDA foods and funds for replacement are available. Release of USDA foods to be a maximum of 30 days.  
  - For congregate feeding during a situation of distress involving a non-natural event, release USDA foods to the extent that USDA foods and funds for replacement are available, with prior approval from USDA, and per extent and length of time as determined by USDA.  
- For household feeding during a situation of distress, release USDA foods only with prior approval from USDA and per extent and length of time as determined by USDA. |
| **Department of Transportation: State Traffic Operations Center** |  
- Provide guidance for re-routing of traffic in and around an affected area.  
- Identify traffic control issues and needs, including the establishment of movement corridors.  
- Identify potential sources of outside assistance (e.g., contractors, equipment, sources, etc.).  
- Provide additional traffic control devices for law enforcement to use in a quarantine area or detour. |
| **University of Wisconsin-Extension** |  
- Provide technical assistance in planning stages.  
- Provide surveillance assistance in the prevention, protection, mitigation, response, and recovery mission areas.  
- Provide laboratory services for animal and plant related analytical needs.  
- Provide system wide resources (e.g. UW School of Veterinary Medicine, Cooperative Extension Service system and personnel) to assist in diagnosis of animal disease.  
- Provide and distribute information regarding the incident. |
### Agriculture & Natural Resources

#### III.C. Non-Governmental Support Organizations

<table>
<thead>
<tr>
<th>Agency</th>
<th>Functions</th>
</tr>
</thead>
</table>
| American Red Cross              | • Coordinate sheltering operations with feeding operations at specified sites.  
|                                 | • Identify and assess the requirements for food and distribution services on a two-phase basis:  
|                                 | o Critical emergency needs immediately after the disaster  
|                                 | o Longer-term sustained needs after the emergency is over  
|                                 | • Coordinate the food distribution efforts of other volunteer organizations.                                                                                                                                                                                                 |
### III.D. Federal Government

</tr>
</tbody>
</table>

| USDA: Food Safety and Inspection Services | • Inspect and verify food safety aspects of slaughter and processing plants that sell products outside of Wisconsin, products in distribution and retail sites, and import facilities at ports of entry. |
|                                         | • Conduct laboratory analysis of food samples.                                                                                                  |
|                                         | • Control products suspected to be adulterated.                                                                                                 |
|                                         | • Issue plant closures.                                                                                                                          |
|                                         | • Conduct food borne disease surveillance and field investigations.                                                                             |

| USDA: Food Nutrition Services | • Coordinate the determination of nutrition assistance needs.                                                                                      |
|                             | • Obtain appropriate food supplies.                                                                                                               |
|                             | • Arrange for delivery of supplies.                                                                                                              |
|                             | • Authorize disaster food stamps.                                                                                                                 |
|                             | • Coordinate with states to release their USDA foods supplies to feed people at shelters and mass feeding sites or to distribute USDA foods to households, as appropriate. |
|                             | • Coordinate the replenishing of a state’s USDA foods supplies from other states or from USDA foods inventories, when necessary.                      |
|                             | • Seek authorization from the Secretary of Agriculture for special funding to buy or replenish USDA foods stocks.                                  |
**USDA: Farm Service Agency**
- Administer the State Emergency Board, which works with Wisconsin Emergency Management requesting county disaster declarations.
- Administer assistance programs to producers when an emergency or disaster declaration is made, including disaster assistance program and farm loan programs.

**USDA: Natural Resource Conservation Service**
- Provide technical and financial assistance to land owners and managers regarding soil, water, and other natural resources conservation.
- Provide technical assistance in soil science, agronomy, conservation engineering, grazing, flood control, water resources, ecological sciences, resource economics, and social sciences.
- Provide expertise in soil science and leadership for soil surveys and for the National Resources Inventory, which assesses natural resource conditions and trends in the United States.
- Develop and maintain conservation practice standards.

**United States Department of Health & Human Services: Indian Health Service**
- Support coordination with tribal health authorities.

**United States Department of the Interior: Agency as a whole**
- Provide scientific and technical advice, information, and assistance to help prevent or minimize injury and restore or stabilize natural, cultural, and historic resources.
- Conduct resource assessments.
- Provide the response resources of the National Interagency Fire Center (e.g., incident management teams, communications equipment, etc.).
- Provide technical and financial assistance to landowners and communities to help assess the needs for important fish and wildlife habitat and population restoration, as appropriate

**United States Food and Drug Administration: Agency as a whole**
- Provide technical assistance in planning stages for food contamination issues.
- Provide technical assistance in the prevention, protection, mitigation, response, and recovery mission areas.
- Provide laboratory assistance through the Food Emergency Response Network (FERN).

Intentionally left blank
I. Introduction

I.A. Purpose

To coordinate agencies and organizations in supporting local and volunteer response and recovery operations for animals affected by a natural, technological, or human-caused disaster when local capabilities are overwhelmed.

I.B. Scope

I.B.1 Response
   a) Assessment
   b) Control and eradication or control foreign animal disease
   c) Search and rescue
   d) Collection of stray animals
   e) Evacuation and shelter (including tracking) of evacuated household pets
   f) Zoo and sanctuary animal issues
   g) Veterinary medical care and assistance
   h) Human health risks

I.B.2 Recovery
   a) Reunification of animals and owners
   b) Placement of abandoned animals
   c) Disposal of animal carcasses
I.C. Definitions

I.C.1 Household pet

A domesticated dog, cat, bird, rabbit, rodent, or turtle that:

a) Is traditionally kept in the home for pleasure rather than for commercial purposes
b) Can travel in commercial carriers
c) Can be housed in temporary facilities
d) Does not include reptiles (except turtles), amphibians, fish, insects, arachnids, farm animals (including horses), or animals kept for racing purposes

I.C.2 Service animal

a) The American with Disabilities Act of 1990 (ADA), as amended, defines a service animal as a dog of any breed or size, or a miniature horse that is individually trained to do work or perform tasks for an individual with a disability.

b) Wisconsin state law expands this definition to include guide dog, signal dog, or other animal that is individually trained or is being trained to do work or perform tasks for the benefit of a person with a disability, including:

   (1) The work or task of guiding a person with impaired vision
   (2) Alerting a person with impaired hearing to intruders or sound
   (3) Providing minimal protection or rescue work
   (4) Pulling a wheelchair
   (5) Fetching dropped items

c) The crime deterrent effects of an animal’s presence and the provision of emotional support, well-being, comfort, or companionship do not constitute work or tasks for the purposes of these definitions.

d) Qualified disabilities include physical, sensory, psychiatric, or other mental disability.

e) Service animals must be allowed entry into the shelter when the prospective shelter resident with a disability reports to staff that "this is my service (assistance or disability) animal"

f) Where a county or tribe has not adopted an expanded definition of service animal, apply the reasonable modification policy if an individual with a disability presents with an alternate species of service animal.

I.C.3 Livestock

Those domesticated species of animals used for human food or fiber or those species of animals used for service to humans, including:

a) Bovine animals
b) Equine animals
c) Goats
d) Poultry
e) Sheep
f) Swine other than wild or feral swine

g) Farm-raised deer

h) Farm-raised game birds

i) Camelids (e.g., llamas, alpacas, and camels)

j) Ratites (e.g., ostriches or emu)

k) Farm-raised fish

I.C.4 Exotic animal
An animal non-native to Wisconsin.

I.C.5 Any animal:

a) Of a feral nature

b) normally found in the wild in Wisconsin

c) not a domestic animal native to Wisconsin

I.C.6 Captive wildlife
Native or non-native undomesticated animal held in a controlled environment designed to prevent the departure of wildlife from the controlled environment

I.D. Policies

I.D.1 The Pets Evacuation and Transportation Standards Act of 2006 amends the Robert T. Stafford Disaster Relief and Emergency Assistance Act to ensure that state and local emergency preparedness operational plans address the needs of individuals with household pets and service animals following a major disaster.

I.D.2 Under the Americans with Disabilities Act (ADA):

a) Individuals with disabilities must be permitted to be accompanied by their service animals in all areas of a place of public accommodation where members of the public, program participants, clients, customers, patrons, or invitees are allowed to go.

b) Service animals must be allowed entry into the shelter when the prospective shelter resident with a disability reports to staff that "this is my service (assistance or disability) animal"

I.D.3 There is no statutory authority in Wisconsin to forcibly evacuate persons and their pets from their residences, but once evacuated, authorities may restrict re-entry to specific hazardous areas. Residents who refuse to evacuate should be informed that:

a) Future opportunities to evacuate may not exist.

b) Emergency response services within the evacuated area may become unavailable.

c) Return to the evacuated area may be restricted or prohibited.

I.D.4 Department of Military Affairs/Wisconsin Emergency Management (DMA/WEM) provides guidance in the reception and management of service animals in emergency shelters.

I.D.5 The State of Wisconsin does not provide shelter for displaced captive wildlife. Owners of captive wildlife facilities should develop their own emergency plans.
I.D.6 WEM endorses the National Mass Evacuation Tracking System (NMETS) as the system of choice for tracking evacuated residents, their pets, and their belongings.

II. Concept of Operations

II.A. Mobilization

II.A.1 Initial awareness of the need for local animal disaster response support generally originates from one of two sources:

a) Local responders, ESF 11 personnel, or emergency management who notify:
   (1) WEM duty officer (DO), who contacts
   (2) DATCP Division of Animal Health (DATCP/DAH), State Veterinarian’s Office.

b) Situational awareness in the event the SEOC is at Level 3 or higher, which may drive mobilization considerations in advance of a local request for support.

II.A.2 Upon notification, the State Veterinarian’s Office:

   a) Completes an assessment to identify thresholds for action.
   b) May mobilize one or more of the following:
      (1) Wisconsin Animal Reserve Core (WARC) team(s)
      (2) DATCP Incident Management Team
      (3) AVMA Veterinary Medicine Assistance Team(s)
      (4) NARSC Support
      (5) Emergency Management Assistance Compact (EMAC) support
   c) May activate the Agency Coordination Center (ACC).
   d) May consider hotline mobilization.

II.B. Organization

II.B.1 County animal disaster response authorities, in coordination with the county emergency management plan and the EOC Incident Command System (ICS), retain operational authority of ESF 11-related response and recovery.

II.B.2 DAH State Veterinarian’s Office, coordinates the Animal Disaster Response Plan via ESF 11 through the Human Services Branch of the Operations Section at the SEOC. (See Figure 1: Animal Disaster Response ICS Organization)

   a) Provides support, technical assistance, and coordination assistance to the local and regional emergency animal disaster response
   b) Alerts supporting state agencies, as needed
   c) Generates lists of appropriate credentialed animal health care providers from relevant registries, as needed
   d) Initiates the formation of a needs assessment team in the early stages of the response to:
II.B.3 All federal assistance for animal care must be requested by DATCP and must be coordinated through the Animal Disaster Response Plan.

II.B.4 The field response organization to a disaster affecting animals would likely resemble the following chart.

Figure 1: Animal Disaster Response ICS Organization

II.C. ESF Activities

The WERP Basic Plan defines standardized tasks that constitute the prevention, protection, mitigation, response, and recovery responsibilities of any agency that serves a role in emergency management.

This section defines those activities that are unique to ESF 11, and is intended to be used in conjunction with the common tasks outlined in the Basic Plan.

<th>Agency</th>
<th>Functions</th>
</tr>
</thead>
<tbody>
<tr>
<td>Adventist Community Services</td>
<td>• Provide coordination and support for donations management of animal-related resources.</td>
</tr>
<tr>
<td>American Red Cross</td>
<td>• Provide support in ensuring ESF 6 operations are well coordinated with the Animal Disaster Response Plan.</td>
</tr>
<tr>
<td>American Veterinary Medical Association</td>
<td>• Provide early damage assessment personnel to assist in determining what resources may be needed from outside the state.</td>
</tr>
<tr>
<td></td>
<td>• Provide basic volunteer treatment teams to augment local capabilities.</td>
</tr>
<tr>
<td>National Animal Rescue &amp; Sheltering Coalition</td>
<td>• Provide a single NARSC point of contact to incident command.</td>
</tr>
<tr>
<td></td>
<td>• Through NARSC member agencies provide technical assistance and coordination for assessment, logistical support, shelter, evacuation, transportation, rescue, sheltering, and reunification of animals.</td>
</tr>
<tr>
<td>Wisconsin Veterinary Medical Association</td>
<td>• Provide education and outreach to volunteer veterinarians and technicians to assist in animal disaster response and recovery.</td>
</tr>
</tbody>
</table>
III.D. Federal Support Agencies

Table 8: Federal Support Agencies Functions

<table>
<thead>
<tr>
<th>Agency</th>
<th>Functions</th>
</tr>
</thead>
</table>
| Federal Emergency Management Agency: Agency as a whole | • Provide multi-agency coordination and support.  
• Provide reimbursement of eligible costs related to evacuation of household pets and services animals under the Pets Evacuation and Transportation Standards Act of 2006. |
| United States Department of Health & Human Services: National Veterinary Response Teams | • Provide infrastructure assessment.  
• Provide support for sheltered, working, and laboratory animals.  
• Provide primary care for large and small animals.  
• Request regional emergency coordinators through ESF 8. |
| United States Department of Agriculture: Animal Plant Health Inspection Services | Animal Care  
• Provide coordination for disaster animal response and sheltering, in coordination with FEMA.  
Veterinary Services  
• Provide technical assistance and support, as requested and appropriate.  
Wildlife Services  
• Provide technical assistance and support as appropriate related to capture or depopulation of wild or captive wild animals. |

I. Introduction

I.A. Purpose

The purpose of this ESF is:
I.A.1 To provide state support to federal, state, local, and tribal governments in an all-hazards approach when responding to a natural or manmade disruption of energy supplies and distribution.

I.A.2 To provide support to energy providers in response to long term energy outages that are significantly larger than the state typically experiences; a long-term energy outage incident criteria is established in the scope statement. The determination of whether an incident is defined as a long-term energy outage may be relative to the resources available in the area where the incident occurs.

I.A.3 To provide for the effective use of available electric power, natural gas, coal, and petroleum products in ways that meet essential needs and facilitate restoration of energy systems affected by an emergency incident.

I.A.4 To determine the extent of an energy emergency along with the appropriate response and to coordinate and implement mitigation strategies.

Nuclear energy incidents response along with information related to nuclear energy is not a part of this ESF but is included in the Radiological/Nuclear Incident Plan Annex of the Wisconsin Emergency Response Plan.

I.B. Scope

I.B.1 All actions following any emergency or disaster will be determined by the specific incident.

I.B.2 ESF 12 describes the lead coordination roles and the separation and specification of responsibilities among state agencies.

I.B.3 ESF 12 is applicable to all state departments and agencies with statutory responsibilities and assets to support state, local, and tribal response to actual or potential energy emergencies.

I.B.4 State agency actions are determined by specific state statutes as well as state agency plans and policies. Appropriate actions include efforts to provide appropriate planning, response, recovery, and mitigation for emergencies involving energy.

I.B.5 While the cause of an energy emergency and the energy types involved may vary significantly from incident to incident, energy emergencies typically fall under the two general categories below. ESF 12 is applicable to both types of energy emergencies:

a) Fuel shortages (e.g. propane, natural gas, vehicle fuel, etc.)

b) Long-term power outages impacting a large population, area, or CIKR assets.

I.C. Policies

I.C.1 For the purposes of this ESF, the term “energy” in energy emergency applies to all forms of energy, including electrical power, natural gas, petroleum, coal, and nuclear energy. Should the incident involve a disruption of nuclear energy, refer to the Radiological Nuclear Annex.

I.C.2 Section 16.955 of the Wisconsin Statutes authorizes the governor to declare an energy alert.
Wisconsin Emergency Response Plan

Energy

a) Once an energy alert is declared, the PSC-OEI may compel energy producers, importers, or sellers to furnish information on existing and future fuel supplies along with anticipated fuel demands.

b) Electricity, natural gas, and wood fuels are excluded from this authority. In addition, under § 16.95(12) of the Wisconsin Statutes, the OEI is to “prepare and maintain contingency plans for responding to critical energy shortages so that when the shortages occur they can be dealt with quickly and effectively.”

I.C.3 The Wisconsin Energy Assurance Plan prepared by the OEI provides detailed information regarding energy shortages, disruptions, and emergency operations plans and should be used as a supplement to this ESF.

I.C.4 WEM is the lead coordinating agency under ESF 12.

a) WEM will work with the PSC and the OEI in the event of a disaster that involves the state’s energy resources to meet the intent of ESF 12.

b) The PSC and the OEI will serve as lead advisory agencies to WEM depending on the utility services or the energy supplies that are affected by the emergency.

c) The OEI will coordinate with non-regulated energy providers to provide information relevant to incident stabilization.

I.C.5 WEM will coordinate emergency-related activities of other state agencies during an energy emergency. Those state agencies with additional authority will be notified to implement their energy emergency plans.

I.C.6 If an energy emergency should occur, the governor may ask the public to institute voluntary measures that conserve energy and ensure supply to critical facilities.

a) WEM coordinates with other agencies including the PSC and the OEI to identify the appropriate conservation measures.

b) Mandatory energy reduction measures are only implemented, as necessary.

I.C.7 If allocation of energy resources is required, ESF 12 agencies will collaborate with public and private partners to ensure priority is given to life safety, incident stabilization, and protection of Wisconsin’s economic and environmental interests.

I.C.8 All local plans should be compliant with the Americans with Disabilities Act and include provisions integrated throughout appropriate annexes or essential support functions for meeting the functional needs of individuals within their jurisdictions in the areas of:

a) Maintaining independence – support for obtaining consumable medical supplies, durable medical equipment, service animals, and attendants or caregivers.

b) Communications – adaptive communications systems to compensate for hearing, vision, speech, cognitive, or intellectual limitations, and limited English language proficiency.

c) Transportation – support for individuals who cannot drive or who do not have access to a vehicle. This may include a requirement for accessible vehicles with special equipment lifts or oxygen.

d) Supervision – additional support due to the loss of caregivers, family, or friends, particularly if the evacuee has dementia, Alzheimer’s, or psychiatric conditions. Children separated from parents or legal guardians will present the need for
supervision. The type and amount of supervision will depend upon their age and medical condition.

e) Medical care – specialized professionals to assist with medical care, such as terminal or contagious conditions, intravenous therapy, tube feeding, dialysis, oxygen and suction administration, wound management, and power-dependent life-sustaining equipment.

II. Planning Assumptions

II.A.1 A significant energy outage incident may cause significant disruption to the critical infrastructure of a municipality, tribal nation, county, or state.

II.A.2 The resources required as a result of a significant energy outage may immediately exceed the resources available within local jurisdictions, tribal, county, or state governments, and may require immediate federal assistance. In particular, the following items may need to be addressed during an energy emergency:

a) Mass care – ability to manage and provide food and shelter to a large, displaced, and possibly contaminated, evacuee population.

b) Debris management – the damage and amount of debris left from the incident is so extensive that local and regional capabilities are exceeded. The type of debris may require technical assistance to deal with environmental and contamination issues.

c) Public information – the need for providing on-going, consistent, and clear public information may overwhelm local resources requiring additional resources. Accurate and continuous information is needed to assuage mass confusion and panic. Depending upon the scope and dimensions of the incident, there may be the need to provide information on a national scale.

d) Fuel distribution and resupply – the ability of local public and private sector entities to obtain fuel for backup generators may be impaired during a widespread, long-term power outage. It may be necessary to facilitate deliveries of fuel from outside the impacted area.

II.A.3 Local jurisdictions, tribes, and state agencies will manage the initial response and recovery operations for the first seventy-two hours, while other mutual aid agencies and federal resources mobilize and respond.

II.A.4 Lack of immediate availability or limited resources may result in a prioritized response and adjusted standards of service.

II.A.5 Damage to critical infrastructure such as transportation, communications, and utility systems may isolate some communities, creating islands within the disaster area.

II.A.6 Local jurisdictions and tribes have identified and catalogued essential response and recovery assets.

II.A.7 Jurisdictions within Wisconsin’s six WEM regions have created, executed, and exercised mutual aid agreements and contracts.

II.A.8 Any necessary evacuations will be conducted in accordance with local, tribal, county or state evacuation plans.

II.A.9 Shelters that have been previously identified in the impacted area(s) may not be usable due to lack of power and heat. This may necessitate using shelters outside of the impacted area(s) or setting up temporary shelters using tents/trailers.
II.A.10 All local plans include provisions integrated throughout appropriate annexes or emergency support functions to provide for the evacuation and sheltering of service animals and household pets in accordance with the Animal Response Plan, Attachment 1 to ESF 11.

II.A.11 Public safety and emergency response personnel that normally respond to emergencies may be among those affected and unable to perform their duties.

II.A.12 Out-of-state incidents:
   a) Significant energy outage incidents out-of-state could necessitate requests for Wisconsin-based resources and materials, made through the EMAC and other agreements by the affected state(s) during the emergency.
   b) Out-of-state energy emergencies could result in a large number of people being evacuated through or to Wisconsin.

II.A.13 There may be multiple incidents that occur simultaneously (such as severe weather or terrorist incidents) within non-contiguous areas dispersed over a large geographic area.

II.A.14 A significant energy outage incident may occur with little or no warning, such as in the case of a cyber-attack.

II.A.15 An accurate scope or magnitude of the incident may not be available for at least twenty-four to forty-eight hours after the incident. As a result, response activities will need to begin without the benefit of a detailed or complete assessment of critical needs.

III. Concept of Operations

III.A. General

The appropriate response to energy disruptions and their effects is necessary for preservation of the public health, safety, and general welfare of our state’s citizens. In the event of an energy emergency, WEM, with the assistance of the PSC and the OEI may:

   III.A.1 Work with all affected stakeholders to compile estimates of the extent of damage to energy delivery systems such as pipelines, transmission lines, fuel terminals, rail lines, etc.

   III.A.2 Request and analyze current information regarding energy supply and demand.

   III.A.3 Identify critical demand and supply needs for critical infrastructure and key resources (CIKR) facilities and high risk and priority customers and producers.

   III.A.4 Coordinate with other local and tribal governments and private partners to respond to the energy emergency.

   III.A.5 Coordinate with other state agencies and the Governor’s office to assist with the energy emergency.

   III.A.6 Coordinate with energy producers, providers, and distribution entities to identify critical repair requirements.

   III.A.7 Coordinate with federal, state, tribal, and local jurisdictions to establish damage repair priorities. WEM will use all sources available including the OEI’s Wisconsin
Energy Assurance Plan, which outlines the resources available to address energy shortages.

III.A.8 Coordinate the supply and distribution of temporary or alternate energy sources.

III.A.9 Implement and coordinate emergency measures to reduce demand with an emphasis on voluntary measures.

III.A.10 Share information with federal response agencies as appropriate to enable incident stabilization and recovery.

III.A.11 Assist with the continuity of operations both in the public and the private sector.

III.B. Mobilization Triggers

III.B.1 WEM activates ESF 12 whenever:

a) County, tribal, or municipal jurisdictions request state level support because locally available resources are exhausted or are likely to be exhausted.

b) The energy outage/shortage affects multiple counties, a wide region of the state, extended time, or adverse weather conditions cause additional safety concerns.

c) The energy outage/shortage requires significant aid from utility companies or other energy providers from other states.

d) An energy shortage or outage in another state is likely to significantly impact Wisconsin’s energy supply or there is a need to coordinate significant support from Wisconsin to another state to enable recovery.

III.B.2 ESF 12 lead and supporting agencies adjust response activities based on the circumstances of each incident. The Wisconsin Energy Assurance Plan lists four categories of energy shortage (included below), which are used to identify an incident’s severity. For specific information about response activities during each category of shortage, please reference the Wisconsin Energy Assurance Plan.

a) Shortage Level 1 – Monitor and Alert.

   (1) There is not a shortage in the state but shortages are possible elsewhere caused by external conditions, which alert officials to increase monitoring.

b) Shortage Level 2 – Mild Shortage.

   (1) Can be part of ongoing fluctuating nature of the volatile energy market.

   (2) The National Association of State Energy Officials (NASEO) defines a mild shortage as a five to ten percent reduction in petroleum products or natural gas supply for one week or more.

c) Shortage Level 3 – Moderate Shortage.

   (1) May be defined as a ten to fifteen percent reduction of petroleum products or natural gas supplies for three weeks or more.

   (2) Damage may occur to electric transmission/distribution infrastructure or electric power is cut off to large numbers of customers from 72 hours to a week.

d) Shortage Level 4 – Severe Shortage.

   (1) May be defined as a twenty to thirty percent and above loss of petroleum products, natural gas, or electricity for more than two weeks.
(2) Wisconsin statutes call for a declaration of an Energy Emergency if officials perceive a “serious risk to the economic well-being, health, or welfare of the citizens” of the state.

III.C. Organization

III.C.1 Electricity is distributed, by investor-owned utilities, municipal utilities, or electric cooperatives, to the individual end-users. Transmission infrastructure owners and operators are responsible for maintenance and operation of the electric transmission lines.

III.C.2 Wisconsin utilizes energy from a number of sources including: coal, natural gas, propane, petroleum, and other renewable resources. For a detailed overview of Wisconsin’s energy usage and profile please reference Section 6 of the Wisconsin Energy Assurance Plan.

III.C.3 MISO is a multi-state organization that is responsible for overseeing the operations of the electric transmission grid and dispatching generation for market participants within its regional territory. All of Wisconsin is within MISO’s territory. MISO’s responsibilities during emergencies that affect the bulk power system are further described in the Wisconsin Energy Assurance Plan.

III.C.4 North American Electric Reliability Corporation (NERC) is the electric reliability organization (ERO) for North America, subject to oversight by the Federal Energy Regulatory Commission (FERC) and governmental authorities in Canada. NERC develops reliability standards for the bulk power systems in North America, and is certified by the FERC. NERC facilitates the Electricity Information Sharing and Analysis Center (E-ISAC).

III.C.5 Many end-users with high reliability needs (e.g. health care facilities, manufacturers, etc.) may have installed back-up generation, which is outside the control of the primary electric generation and distribution system. This source of electric power is largely unregulated and less accessible to control in emergencies.

III.C.6 WEM may assign lead coordinating responsibilities to the appropriate support agency depending on the type of energy emergency.

III.C.7 During an energy emergency or disaster situation, the lead coordinating agency and support agencies of ESF 12 will assign personnel to the state emergency operations center (SEOC), as appropriate.

III.D. Procedures

III.D.1 WEM, PSC, and the OEI maintain contacts within each sector of Wisconsin’s energy profile in order to facilitate information sharing and enable early detection and efficient response to potential energy emergencies.

III.D.2 In the event of an actual or potential energy emergency, the WEM twenty-four hour duty officer (DO) or the SEOC, contacts PSC, the OEI, and other appropriate ESF 12 agencies to discuss the response actions.

III.D.3 WEM will work with the PSC, OEI, appropriate ESF 12 support agencies, utilities, and energy providers to obtain impact and damage assessment reports, current and projected supply levels, and other information relevant to the incident. WEM may utilize conference calls or other means to coordinate response efforts with various state agency and industry partners.
III.D.4 To the extent possible, energy providers will continue to provide services through their normal means during a disaster.

III.D.5 During a fuel shortage, the SEOC, with the assistance of the OEI, will work with local petroleum suppliers and major oil companies to identify and facilitate the delivery of available petroleum fuel supplies to priority customers.

III.D.6 During significant energy emergencies which require out-of-state resources, the SEOC will coordinate with FEMA and other entities to obtain the required support.

III.E. ESF Activities

The WERP Basic Plan defines standardized tasks that constitute the prevention, protection, mitigation, response, and recovery responsibilities of any agency or energy partner that serves a role in emergency management. This section defines those activities that are unique to ESF 12, and is intended to be used in conjunction with the common tasks outlined in the WERP Basic Plan.

### IV. Agency Responsibilities

#### IV.A. Lead Coordinating Agency – Department of Military Affairs

<table>
<thead>
<tr>
<th>Agency</th>
<th>Functions</th>
</tr>
</thead>
</table>
| **Department of Military Affairs: Wisconsin Emergency Management** | • Serve as the lead coordinating agency in the event of an energy emergency or designate the appropriate state support agency as the lead.  
• Minimize impact of an energy emergency by gathering information from the lead advisory agencies and private partners about energy availability and distribution issues during emergency or disaster situations.  
• Coordinate the identification of supplemental local energy or utility resources, such as emergency lighting or generators, with local jurisdictions.  
• Dispatch regional directors to establish contact with local and tribal jurisdictions, as... |
necessary. Establish and maintain direct communication and coordination with local and tribal governments affected by an energy emergency or disaster.

- Coordinate with the PSC and the OEI to notify the governor when conditions exist or are anticipated that might warrant the declaration of a statewide or localized energy supply alert or emergency.
- Administer energy allocation and curtailment programs in accordance with federal programs and with the governor’s statutory emergency powers.
- Coordinate with the governor’s office, along with the PSC, the OEI, and other state agencies on public information in accordance with ESF 15.
- Maintain up-to-date data including addresses and contact names for all major utilities, MISO, and other related energy organizations for use, as needed by the SEOC.
- Coordinate with appropriate agencies to provide supplemental energy, utility, and petroleum resources.
- Coordinate with the PSC in the development of an inventory of available state energy and utility resources.
- Maintain an inventory of statewide volunteer, private, and federal emergency energy and utility resources.
- Maintain liaison with FEMA and all appropriate federal agencies.

### IV.B. Lead Advisory Agencies

**Table 6: Lead Advisory Agencies**

<table>
<thead>
<tr>
<th>Agency</th>
<th>Functions</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>- Administer energy allocation and curtailment programs in accordance with federal programs and with the governor’s statutory emergency powers.</td>
</tr>
<tr>
<td></td>
<td>- Assist WEM with coordinating supply and distribution of temporary or alternative energy sources.</td>
</tr>
<tr>
<td></td>
<td>- Maintain a list of petroleum, energy, and transportation contacts throughout the state and the Midwest region.</td>
</tr>
<tr>
<td></td>
<td>- Compile damage assessment estimates from petroleum and other energy suppliers in accordance with state statutes and administrative rules.</td>
</tr>
<tr>
<td></td>
<td>- Provide OEI staff to the SEOC and coordinate information with the JIC, as necessary.</td>
</tr>
<tr>
<td></td>
<td>- Maintain listing of biofuels production facilities.</td>
</tr>
<tr>
<td>Public Service Commission: Regulatory Staff</td>
<td>- Provide information to the SEOC regarding the status of energy infrastructure damage, supply adequacy, and market situation.</td>
</tr>
<tr>
<td></td>
<td>- Provide the SEOC with the location, extent, and restoration status of energy supply outages or disruptions.</td>
</tr>
<tr>
<td></td>
<td>- Assist WEM to assess the supply and distribution of temporary or alternate energy sources applicable to electric and natural gas services.</td>
</tr>
<tr>
<td></td>
<td>- Maintain a list of appropriate electric and natural gas utility contacts throughout the state and Midwest region.</td>
</tr>
<tr>
<td></td>
<td>- Compile damage assessment estimates from electric and natural gas utilities under state statutes and administrative rules.</td>
</tr>
<tr>
<td></td>
<td>- Provide staff to the SEOC and coordinate public information with the JIC, as necessary.</td>
</tr>
</tbody>
</table>
### IV.C. Wisconsin Governmental Support Agencies

Table 7: State Government Support Agencies Functions

<table>
<thead>
<tr>
<th>Agency</th>
<th>Functions</th>
</tr>
</thead>
</table>
| Department of Agriculture, Trade & Consumer Protection | • Provide staff to the SEOC, as necessary.  
• Provide information on aboveground and underground storage tanks.  
• Activate ESF 11 for an energy emergency that leads to a response to animal health and crop safety relating to a chemical, biological, radiological, nuclear, and explosive (CBRNE) incident.  
• Activate ESF 11 for response to a food product that may be adulterated during an energy emergency.  
• Provide support to other agencies and the public during an energy emergency to ensure that consumers are protected from unfair practices (e.g., gas gouging, etc.) and certify fuel pumps are accurately delivering fuel to the consumers.  
• Provide fuel related technical assistance for maintaining and listing biofuel production facilities and determine their compliance with state regulations.  
• Provide and direct a cadre of retail petroleum inspectors and aboveground and underground storage tank inspectors.  
• Coordinate with state agencies for consistency in the planning process. |
| Department of Safety & Professional Services | • Report to the SEOC, if necessary.  
• Participate in the planning process for response to energy emergencies.  
• Provide information on business and community resources, as appropriate.  
• Minimize environmental and natural resources contamination from petroleum and hazardous liquid storage.  
• Provide a cadre of building, electrical, and other inspectors to assist assessment of damage.  
• Provide expedited building plan review during the recovery phase.  
• Provide recovery consultation services for construction recovery projects affected by the disaster or emergency. |
| Department of Health Services                | • Provide staff to the SEOC, as necessary.  
• Participate in the planning process for response to energy emergencies.  
• Activate ESF 6 in order to coordinate state, county, local, tribal, and volunteer activities to aid victims of an energy emergency or disaster and assist local providers in the provision and securing of mass care, housing, economic assistance, and human services, including crisis counseling and support for citizens with access and functional needs, as necessary.  
• Activate ESF 8 in order to assist local agencies in responding to any impacts or threats involving health and medical services to citizens at the local and tribal level, as necessary. |
| Department of Natural Resources              | • Minimize damage/impact to natural resources and the environment along with contamination.  
• Monitor state waters suspected of contamination due to an energy emergency or disaster situation.  
• Provide staff support to the SEOC during an energy emergency, if necessary.  
• Provide technical assistance for the identification, containment, removal, and disposal of pollutants and hazardous materials from the environment. |
Agency Functions
---
**Department of Transportation**
- Provide liaison to the SEOC and incident command post, if necessary.
- Provide highway operations information through the State Traffic Operation Center (STOC).
- Coordinate the movement of coal by the railroads to the coal powered electric generation plants or propone tank cars to terminals.
- Participate in the planning process for a response to an energy emergency.
- Work closely with federal, state, tribal, and local governments acting as a conduit for information related to airport, harbor, and port security.
- Monitor railroads that provide key transportation services for the delivery of coal to coal fired utilities around the state, assisting in securing routes should emergency shipments be needed.

**Department of Military Affairs: Wisconsin National Guard**
- Provide liaison to the SEOC, local and tribal EOC, and incident command post, as necessary.
- Participate in planning for response to energy emergencies.
- During an energy emergency, provide assistance as appropriate for emergency generation capabilities.
- During a terrorist incident causing an energy emergency, assist with the identification and assessment of the consequences, advise on response measures and assist with requests for additional support.
- Upon activation by the governor, provide support to law enforcement, transportation, medical, engineering and command and control of WING forces.

**Department of Transportation: Wisconsin State Patrol**
- Provide and assist others in providing law enforcement support in an energy emergency for security of CIKR facilities, equipment, and other related issues.
- Provide and assist with traffic control (detours, road closures, etc.), as required.
- Monitor highways that may provide key truck transportation routes for the delivery of energy (i.e. oversize/overweight coordination and approvals, exempting fuel oil and coal shipments for the duration of the incident) that may require granting exemptions in emergencies.

**IV.D. Regional Energy Organizations**

<table>
<thead>
<tr>
<th>Agency</th>
<th>Functions</th>
</tr>
</thead>
</table>
| Midcontinent Independent System Operator (MISO) | - Perform bulk-electric grid Reliability Coordinator functions per federal regulations.  
- Determine and communicate when a capacity or energy emergency is forecasted, occurring, or has ended.  
- Take actions as listed in Figure 5 of the *Wisconsin Energy Assurance Plan*. |
| Local/Tribal Governments | - Coordinate energy emergency issues with local public/private utilities.  
- Maintain emergency call lists of contacts for public/private utilities.  
- Provide updates to the SEOC as required regarding ESF 12 matters.  
- Issue evacuation orders.  
- Provide mutual aid to other jurisdictions, as required.  
- Provide support for population protection activities. |
| American Petroleum Institute/Wisconsin Petroleum Council | - Participate with state agencies on homeland security and energy assurance issues. |
Agency | Functions
---|---
Wisconsin Petroleum Marketers and Convenience Store Association | • Assist state in working with petroleum product outlets by communicating and aggregating information and special requests.  
• Provide a communications network to its membership.  
• Provide training on related matters.
Wisconsin Propane Gas Association | • Provide communications and training.  
• Represent the industry to appointed and elected officials.
Municipal Electric Utilities Association | • Provide communications and training.  
• Represent the industry to appointed and elected officials.
Cooperative Network | • Provide communications and training.  
• Represent the industry to appointed and elected officials.
Wisconsin Utilities Association | • Provide communications and training.  
• Represent the industry to appointed and elected officials.

**IV.E. Federal ESF Coordinating Agencies**

Table 9: Federal Coordinating Agencies

<table>
<thead>
<tr>
<th>Agency</th>
<th>Functions</th>
</tr>
</thead>
</table>
| U.S. Army Corps of Engineers, 249th Engineer Battalion | • Assist with preparedness activities.  
• Provide technical expertise and perform assessments to determine generation needs at CIKR facilities.  
• Support emergency power needs at critical public facilities in support of FEMA. |
| Department of Energy | • Coordinate the federal ESF 12 response.  
• Assist in obtaining emergency delivery of various fuel products. |
| Federal Energy Regulatory Commission | • Develop rules related to the construction and operation of interstate gas pipelines along with business practices.  
• Regulate natural gas transportation and rates.  
• Oversee the development of mandatory electric reliability and security standards along with ensuring compliance by users, owners, and operators of the bulk power system.  
• Regulate oil rates and transportation.  
• Maintain an enforcement hotline for the public to report abuse of market power (http://www.ferc.gov/enforcement/staff-guid/enforce-hot.asp). |

**I. Introduction**

**I.A. Purpose**

ESF 13 describes the capability to reduce the impact and consequences of an incident or major disaster by securing the affected area. This is done by safely diverting the public from hazards, providing law enforcement support to other response operations, and sustaining operations from response through recovery. This ESF provides support to local law enforcement when the incident or the event exceeds the capabilities of the local jurisdiction or requires specialized equipment or personnel.

**I.B. Scope**

ESF 13 describes how the state will support local law enforcement activities to ensure the protection of life and property along with recovery during emergency situations.

- **I.B.1** The first priority of this ESF is the preservation of life and property.
- **I.B.2** It provides for the development and maintenance of the Wisconsin Emergency Police Services (EPS) program.
- **I.B.3** It establishes policy direction for state public safety activities prior to and during disasters or acts of terrorism in the state of Wisconsin. These types of incidents may produce consequences that will quickly overwhelm the capabilities of local governmental units.
- **I.B.4** Under the direction of the Wisconsin Homeland Security Council (HSC) and the Wisconsin Department of Justice/Wisconsin Statewide Information Center (WI DOJ/WSIC), goals and strategies for Wisconsin’s protection are developed. Implementation is accomplished through the involved state and federal agencies in Wisconsin. As the lead emergency management agency in Wisconsin, WEM participates in the HSC and the WSIC.
I.C. Policies

I.C.1 The governor of the State of Wisconsin is responsible for promoting the general welfare and protection of its citizens during emergencies, both natural and man-made, including enemy attack (§§ 66.0313, 66.0513, 175.46, and Chapter 323 of the Wisconsin Statutes).

I.C.2 The governor appoints the administrator of WEM. The administrator serves as the director of EPS and administers the overall EPS program.

I.C.3 A deputy director coordinates the EPS program. The procedures that detail the coordination of the EPS program can be found in the Emergency Police Services Program Manual (Supporting Document B.1).

II. Concept of Operations

II.A. General

II.A.1 Upon notification of state emergency operations center (SEOC) elevation, a WSP representative, EPS representative, and the WING representative(s) will respond to the SEOC within one-hour of notification, based on the elevation level, to provide security-related information, planning, and emergency response capabilities to the incident commander.

II.A.2 General ESF 13 functions are:

a) Establish the perimeter and security of incident sites
b) Protect key facilities
c) Control access to incident sites and facilities
d) Provide for the protection of emergency responders, other workers, and the preservation of evidence
e) Control traffic and crowds
f) Assist in the evacuation of the affected area
g) Maintain on-going law enforcement services to existing populations during the incident

II.A.3 ESF 13 will:

a) Support pre-incident planning activities to assist in the mitigation of threats and hazards.
   
   (1) This includes assisting with the development of security plans and conducting security/vulnerability assessments.

   (2) These plans or assessments may require deploying state and federal resources in response to specific threats or potential incidents.

b) Coordinate and direct requests for local law enforcement assistance. Redeploy and restage resources as appropriate.

c) Assess local law enforcement and security requirements.
d) After evacuation efforts are completed, coordinate requests for transportation resources with other ESFs to provide the necessary local assistance.

e) Coordinate state law enforcement resources intended to supplement the needs of local law enforcement. State law enforcement resources may be directed to assist other agencies or volunteer entities with enforcement and security issues during disaster response and recovery.

f) Coordinate with support agencies to prioritize and develop strategies for a coordinated response; continually reassess priorities to address the most critical needs.

g) Coordinate with appropriate federal law enforcement authorities as the incident warrants. During terrorist incidents, ESF 13 coordinates and contributes support to these incidents in accordance with the Terrorism Annex.

h) Coordinate the procurement of specialized security resources such as traffic control devices, chemical, biological, radiological, explosive and nuclear (CBRNE) detection devices, canine units, vehicles, aircraft, and specialized law enforcement personal protective equipment (PPE). Track law enforcement resources that are committed to specific missions.

i) Assist with the coordination of any investigations of the incident for criminal acts and other federal and state accident requirements.

j) Provide ESF 1 with available support during an emergency to facilitate the movement of traffic along the state’s road systems.

k) Coordinate the assistance which is provided by government sponsored volunteer groups and resources in support of the functions of this ESF.

l) In the event of civil unrest/disorder, ESF 13 will provide support for the incident when requested by local authorities.

II.B. Organization

II.B.1 Overall ESF 13 management is a responsibility of WEM as outlined in Section I, including administrative, management, planning, preparedness, response, and recovery activities with the assistance of the supporting agencies listed.

II.B.2 The local jurisdiction agency head is responsible for law enforcement activities in the affected area unless that agency’s commanding officer relinquishes command.

II.B.3 WEM will coordinate activities with other law enforcement agencies assisting the local agency commanding officer.

II.B.4 Law enforcement agencies’ emergency operations are an extension of their normal functions and responsibilities. These responsibilities may be coordinated through the SEOC and the local incident command center.

II.B.5 The coordination of police mutual aid in emergency incidents is provided for through the EPS program.

II.B.6 For EPS purposes, the State of Wisconsin is divided into seven geographical areas along county lines.

II.B.7 Each area has an area director who will organize and coordinate the dispatch of resources in their mutual aid area in times of emergencies.
II.B.8 The EPS manual describes the specific structure, organization, and responsibilities of EPS, as found in Section IV, B.1.

II.C. Mobilization Triggers

II.C.1 The size or complexity of the incident exceeds the capabilities that can be brought to bear with local public safety resources.

II.C.2 Local law enforcement authorities request assistance from state or federal agencies for an incident in their jurisdiction.

II.C.3 The incident requires specialized law enforcement units or capabilities not within the scope of services that the local jurisdiction is able to provide.

II.C.4 The incident crosses jurisdictional boundaries or due to statutory requirements requires law enforcement agencies with broader authority.

II.D. ESF Activities

The WERP Basic Plan defines standardized tasks that constitute the prevention, protection, mitigation, response, and recovery responsibilities of any agency that serves a role in emergency management. This section defines those activities that are unique to ESF 13, and is intended to be used in conjunction with the common tasks outlined in the WERP Basic Plan.

III. Agency Responsibilities

III.A. Common Responsibilities

III.A.1 During non-emergency operational periods, ESF 13 provides for supporting the development and maintenance of the EPS program.

III.A.2 Under the guidelines of the HSC and WSIC, goals and strategies for Wisconsin’s protection are developed.

III.A.3 Support incident management planning activities and actions to assist in the mitigation of threats and hazards.

III.A.4 Develop operational and public safety security plans along with vulnerability assessments in response to specific threats or potential incidents.

III.A.5 All agencies share in the responsibility to identify, train, and assign personnel to be familiar with and support the missions of ESF 13.
III.B. Lead Coordinating Agency – Department of Military Affairs

Table 5: Lead Coordinating Agency Functions

<table>
<thead>
<tr>
<th>Agency</th>
<th>Functions</th>
</tr>
</thead>
</table>
| Department of Military Affairs: Wisconsin Emergency Management | • Coordinate and direct requests for local law enforcement assistance.  
• Coordinate communication among supporting agencies (refer to ESF 2 for guidance).  
• Monitor and assist county and local evacuation efforts.  
• Assess local law enforcement and security requirements.  
• Coordinate requests for other resources with other ESFs to provide the necessary assistance.  
• Coordinate state law enforcement resources intended to supplement the needs of local law enforcement. State law enforcement resources may be directed to assist other agencies or volunteer entities with enforcement and security issues during disaster response and recovery, to include security at temporary shelters.  
• Coordinate with support agencies to prioritize and develop strategies for a coordinated response; continually reassess priorities to address the most critical needs.  
• Coordinate with appropriate federal authorities as the incident warrants.  
• Coordinate the procurement of specialized security resources such as traffic control devices, CBRNE detection devices, canine units, specialized law enforcement PPE, vehicles, and aircraft.  
• Track law enforcement resources that are committed to specific missions.  
• Maintain liaison with WISC for coordination of any related information regarding the incident.  
• Redeploy and restage resources as appropriate.  
• Provide ESF 1 with all available support during an emergency to facilitate the movement of traffic along the state's road systems.  
• Work with WisDOT in the damage assessment process. |

III.C. WEM EPS Deputy Director Federal Agency Interface

Federal assistance provided through the National Response Framework ESF 13 will be coordinated through the director of the EPS program or his/her designee. The EPS director will ensure that the SEOC is kept current on all issues involving the use of federal assistance.

Table 6: WEM EPS Deputy Director Federal Agency Interface

</table>
| U.S. Department of Justice: | • Bureau of Alcohol, Tobacco, Firearms and Explosives (ATF)  
• Drug Enforcement Administration (DEA)  
• Federal Bureau of Investigation (FBI)  
  - Joint Terrorism Task Force (JTTF – Milwaukee Office)  
• U.S. Marshals Service  
• Office of Justice Programs (OJP) - emergency funding support of law enforcement |
III.D. Wisconsin Governmental Support Agencies

Table 7: State Government Support Agencies Functions

<table>
<thead>
<tr>
<th>Agency</th>
<th>Functions</th>
</tr>
</thead>
</table>
| **Department of Administration: Capitol Police** | • Coordinate state-owned transportation resources, as requested.  
• Assist with locating various suppliers of items for whatever type of shortage that may be created.  
• Provide law enforcement support and security for state facilities, institutions, officials, and resources. |
| **Department of Corrections:** | • Secure correctional facilities within the affected area.  
• When appropriate, monitor and deploy the use of inmate strike team help in certain types of disasters.  
• If a facility is within the affected area, coordinate the evacuation, relocation, and transfer of staff and inmate populations to temporary detention facilities, when absolutely necessary.  
• Utilize trained staff to assist with the security of the affected area, if available.  
• Coordinate specialized equipment and heavy machinery for emergency response and or cleanup, if available.  
• Assist in incident command support with specially trained staff, if available.  
• Provide Emergency Response on-call staff, 24/7, 365 days a year. |
| **Department of Health Services:** | • Provide information regarding actual or potential health threat issues affecting responding public safety staff or affected populations.  
• Provide guidance on appropriate personal protective equipment for use by other agencies, as requested. |
<table>
<thead>
<tr>
<th>Agency</th>
<th>Functions</th>
</tr>
</thead>
</table>
| **Department of Justice:**     | • Provide a point of contact for requesting assistance from other WI DOJ resources (e.g. crime lab/field response team, TIME system, fire investigators, and assistant attorney generals).  
  • Gather intelligence information, which may involve coordination with the WSIC and the JTTF.  
  • Provide investigative assistance to local authorities when requested to assist in investigating criminal matters.  
  • Provide legal assistance to law enforcement agencies, particularly when the incident may involve criminal acts. |
| **Department of Natural Resources:** | • Have certified officers respond to the area and provide law enforcement support (e.g. perimeter security, traffic control, escorts, other law enforcement functions) to augment local operations as requested.  
  • Assist in SAR operations, particularly in incidents involving waterways and rural areas.  
  • Provide marine enforcement and security in areas involving public waterways. This may involve liaison to the USCG when ports or federal waterways are involved, such as the Great Lakes and the Mississippi River.  
  • Provide specialized equipment, such as aircraft, watercraft, ATV’s, and snowmobiles in support of ESF 13 activities. |
| **Department of Transportation:** | • Coordinate with WSP in the determination of routes and control points for evacuation actions.  
  • Direct the removal of debris on roadways for critical emergency vehicle passage.  
  • Conduct damage assessments on the state highway system.  
  • Provide highway routing information necessary to redirect traffic from affected areas.  
  • Provide vehicles and coordinate equipment for road closures related to evacuation routes and perimeter security.  
  • Coordinate the mobilization of personnel and equipment required for engineering services related to the state highway system. |
| **University of Wisconsin System Police Departments:** | • Have certified officers respond to the area and provide law enforcement support (e.g. perimeter security, traffic control, escorts, other law enforcement functions) to augment local operations as requested.  
  • Assist in evacuation efforts.  
  • Assist in providing security of critical facilities or shelters. |
### Wisconsin Emergency Response Plan

#### Public Safety & Security

<table>
<thead>
<tr>
<th>Agency</th>
<th>Functions</th>
</tr>
</thead>
</table>
| **Department of Military Affairs: Wisconsin National Guard** | - Upon activation by the governor, provide general public safety and unique specialized services based upon the unit’s capabilities, to assist the local authorities.
- Provide traffic control and incident security.
- Assist in evacuation efforts.
- Assist in providing security of critical facilities or shelters.
- Assist in SAR operations.
- Assist in securing affected correctional facilities, as necessary.
- Provide rotary or fixed wing aircraft in support of ESF 13 activities.
- Specialized Units and Force Packages;
  a) National Guard Reaction Force (NGRF)
  b) Joint Incident Site Communications Capability (JISCC)
  c) Transportation Support
  d) Traffic Control Strike Team
  e) Winter Storm Force Package
  f) Air Mobility Force Package
  g) Armored Vehicle Support Package |
| **Department of Transportation: Wisconsin State Patrol** | - Respond to the area and provide law enforcement support (e.g., perimeter security, traffic control, escorts, other law enforcement functions) to augment local operations, as requested.
- Coordinate with WisDOT in the determination of routes and control points for evacuation actions.
- Assist in specialized SAR, including the deployment of aircraft.
- Maintain database inventories of state law enforcement facilities, equipment, and key personnel throughout the state.
- When necessary, coordinate with the WI DOC, the evacuation and transfer of inmate populations in the affected area.
- Coordinate the issuance and enforcement of guidelines pertaining to specific materials and motor carriers on the roadways during an emergency. |

I. Introduction

I.A. Purpose

I.A.1 To support short-term disaster recovery and mitigation for all affected individuals, families, businesses, communities, economies, and environments.

I.A.2 To promote and integrate hazard mitigation programs and resources in disaster recovery efforts, where possible.

I.B. Scope

Short-term recovery and mitigation includes:

I.B.1 Coordination of all local, state, tribal, federal, private sector, non-profit, and volunteer efforts to restore the public and private sectors to a functional, pre-incident or better state.

I.B.2 Support for the transition of impacted communities to long-term recovery efforts, as needed.

I.C. Policies

ESF 14 is shaped by the following statements and assumptions:

I.C.1 Local primacy

The senior elected official at the lowest affected jurisdictional level is responsible for recovery. Successful recovery is defined by the impacted community.

I.C.2 Shared responsibility

All levels of government share responsibility for recovering from the effects of an emergency or disaster.
I.C.3 Timeliness and flexibility
Recovery requires timeliness and flexibility in coordinating, conducting, and delivering assistance.

I.C.4 Duration
Recovery may include involvement lasting weeks, months, or years depending on the impacts of the event.

I.C.5 Whole Community
Recovery requires the meaningful engagement, inclusion, and empowerment of the whole community.
   a) This includes the ability of all individuals and families to rebound from physical, emotional, social, and economic losses.
   b) This may also address the full range of psychological and emotional needs of the community as it recovers from the disaster through the provision of information, educational resources, support, counseling, screening, and treatment when needed.

I.C.6 Mitigation, resilience, and sustainability
Recovery represents a unique and valuable opportunity for a community to integrate into recovery goals:
   a) Mitigation of future risks
   b) Enhancements to resiliency
   c) Contributions to sustainability

II. Concept of Operations

II.A. Activation

I.A.1 Activation of ESF 14 resources may occur during response to, or in anticipation of, any natural, technological, or human-caused disasters or events that necessitate community recovery and mitigation assistance.

I.A.2 ESF 14 is managed through WEM and at the local or tribal level with additional assistance from any, or all, of the identified supporting agencies and NGO’s, as may be needed.

I.A.3 Functions include, but are not limited to, the following:
   a) Inform and advise the Governor, local officials, and other applicable state officials and agencies on short-term recovery and mitigation.
   b) Coordination of activities as response transitions to recovery.
   c) Assess the economic, environmental, physical, public health, and social consequences in the impacted area and coordinate efforts to address short-term community recovery needs and mitigation opportunities.
   d) Implementation of the Wisconsin Recovery Plan to coordinate disaster response and recovery efforts, when necessary.
II.B. Transition from Response to Recovery

II.B.1 Short-term recovery and mitigation activities are likely to overlap response activities.

II.C. Priorities

The primary priority of ESF 14 is life safety. Secondary priorities include social restoration, economic restoration, and physical restoration. These priorities are further described as follows:

II.C.1 Safety of people
    Ensure people’s safety through effective emergency response and recovery mechanisms.

II.C.2 Social restoration
    Restore the social needs of the community by addressing the psychological and social aspects quickly and concurrently during the response and recovery period.

II.C.3 Economic restoration
    Achieve a balance between the disaster recovery needs of the community and any long-term impact on the local economy.

II.C.4 Physical restoration
    Rebuild a safer and more resilient community.

II.D. Goals

Short-term recovery goals will depend on the scope and magnitude of the event. Short-term recovery goals include, but are not limited to, any or all of the following:

II.D.1 Mass sheltering and feeding of displaced persons

II.D.2 Securing safe re-entry into affected area(s) including:
    a) Conducting debris removal and clean-up of primary transportation routes to support life safety missions
    b) Establishing safe transportation routes to allow access for emergency services and damage assessment

II.D.3 Debris removal and general clean-up

II.D.4 Complete damage assessment to infrastructure, residential, and commercial properties including:
    a) Activating Rapid Assessment Support Teams (RASTs)
    b) Inspecting buildings for structural integrity

II.D.5 Re-establishment of government operations

II.D.6 Restoring essential utilities (water, sewer, power, communication, transportation)

II.D.7 Securing of resources

II.D.8 Expanded social, medical, and behavioral health services including:
    a) Assessing survivors’ needs: medical, psychological, and physical
b) Providing emergency and temporary medical care and establish appropriate treatment protocols

c) Providing behavioral health services and counseling to those that need it

II.D.9 Providing timely and accurate public messaging

II.D.10 Coordinating with 2-1-1 to provide accurate information and referrals

II.D.11 Developing and enforcing ordinances for the repair and reconstruction of damaged structures and facilities

II.D.12 Coordinating with volunteer organizations on all recovery activities (clean-up, repair, restoration of damaged structures, and other unmet needs)

II.D.13 Establishment or activation of long-term recovery committees to address unmet needs as the local level

II.D.14 Participation in joint preliminary damage assessments (PDAs)

II.D.15 If a federally declared disaster, opening and staffing Disaster Recovery Centers (DRCs)

II.D.16 Monitoring activities

II.D.17 Activation of the Wisconsin Recovery Task Force (WRTF)

II.E. Wisconsin Recovery Task Force

The Wisconsin Recovery Task Force (WRTF) may be activated to assist ESF 14. The WRTF is further described in Attachment 1.

II.E.1 WRTF activation triggers include, but are not limited to, the following:

a) Multiple counties requesting state or federal resources.

b) Significant damages to:

   (1) Critical facilities

   (2) Infrastructure

   (3) Housing

   (4) Businesses

c) Severe economic losses.

d) Extensive need, or anticipated need, for:

   (1) WI VOAD agencies

   (2) Crisis counseling

   (3) Case management services

   (4) Unmet needs

e) Federal disaster declaration, or anticipation of a federal disaster declaration, that includes Individual Assistance (IA).

f) Supplemental funding is provided to other federal and state agencies.
Agency Responsibilities

The WERP Basic Plan defines standardized tasks that constitute the prevention, protection, mitigation, response, and recovery responsibilities of any agency that serves a role in emergency management. The following defines those responsibilities unique to ESF 14, and is intended to be used in conjunction with the common tasks outlined in the Basic Plan.

II.F. Lead Coordinating Agency – Department of Military Affairs

Table 2: Lead Coordinating Agency Functions

</table>
| Wisconsin Voluntary Organizations Active in Disaster (see ESF 6) | • Assess Survivor Needs (medical, psychological, and physical).
• Secure resources for short-term recovery and mitigation.
• Coordination with volunteer organizations.
• Mass sheltering and feeding of displaced persons. |

II.I. Federal Support Agencies

<table>
<thead>
<tr>
<th>Agency</th>
<th>Functions</th>
</tr>
</thead>
</table>
| Department of Agriculture             | • Provide emergency loans for agricultural sector.
• Technical assistance for agricultural market recovery.
• Rural housing.
• Technical assistance for resource conservation.
• Technical and financial assistance for emergency watershed protection. |
Agency Functions

- Participate in the joint preliminary damage assessment (PDA) process.
- Establish and operate a JFO
- Management of the PA program.
- Management of the Individual Assistance IA program.
- Management of the hazard mitigation program.
- Participate on the WRTF.

Department of Housing & Urban Development
- Offer assistance for:
  - Housing.
  - Community redevelopment and economic recovery.
  - Public services.
  - Infrastructure; mortgage financing.
  - Public housing repair and reconstruction.

Department of the Interior
- Provide technical assistance in:
  - Community planning and natural and cultural resources expertise.
  - Community liaison for federally-owned lands and facilities.
  - Natural hazard vulnerability analysis expertise.

I. Introduction

I.A. Creation

The Wisconsin Recovery Task Force (WRTF) was created on June 25, 2008 to coordinate state efforts in mitigation, agriculture, business, housing, human needs, and infrastructure as a result of the presidentially-declared major disaster DR-1768.

I.B. Purpose

The WRTF has evolved to serve as the state-level organization responsible for:

I.B.1. Pre-disaster recovery planning
I.B.2. Coordination of state, tribal, and federal recovery efforts
I.B.3. Maintaining readiness and capability to align state Recovery Support Function (RSF) subcommittees with the National Disaster Recovery Framework (NDRF)

I.C. Scope

I.C.1. Pre-Disaster

The WRTF will meet periodically under non-disaster conditions to advance recovery planning efforts that prepare the state, local, and tribal governments to effectively direct recovery activities, expedite a unified recovery effort, and achieve a community’s disaster recovery priorities. Pre-disaster efforts may include, but are not limited to:

a) Engagement and ongoing dialog with recovery stakeholders regarding pre-disaster preparedness and recovery planning
b) Reviewing, revising, and updating the Wisconsin Recovery Plan to provide sound decision-making guidance (including as part of a regular plan-update cycle and following disasters)
c) Soliciting regular feedback from local and tribal government officials and other recovery stakeholders to ascertain if the state is adequately meeting local and tribal needs before and after disasters (including assessing post-disaster needs that exceed traditional state and federal recovery programs)
d) Providing and maintaining WRTF capacity for taking action through a coordinated process that is understood and accepted by participants
e) Increasing awareness and dissemination of recovery capabilities across the whole community
f) Development of a local and tribal disaster recovery plan template
g) Encouraging and supporting development and adoption of local and tribal disaster recovery plans, and, to the extent possible, coordinating with other local, tribal, and regional planning initiatives (comprehensive, economic development, radiological emergency, transportation, etc.) to further enhance opportunities for community resilience

I.C.2. 4.3.2 Post-Disaster

---

WRTF November 2017
The WRTF and constituent Recovery Support Function subcommittees may be partially or fully activated following a disaster declaration. Post-disaster the WRTF functions as the state-level recovery coordinating organization; assists and supports the SDRC; and serves to align the state and tribes with the federal recovery structure consistent with the National Disaster Recovery Framework. Actions and activities may include, but are not limited to:

a) Assisting with the transition from response to recovery and coordination of state, tribal, and federal recovery efforts

b) Engaging necessary resources and subject matter experts to assess economic, environmental, health, physical, and, if applicable, radiological consequences

c) Establishing and maintaining relationships with recovery stakeholders

d) Identifying and developing recovery principles and policies and incorporating short- and long-term recovery actions and activities at the local, regional, tribal, and state levels

e) Working with state, local, and tribal governments and non-governmental and private-sector organizations to develop recovery plans and coordinate recovery efforts

f) Identifying, facilitating, and coordinating the appropriate agencies, programs, and resources to support implementation of recovery plans and provide oversight to ensure continuity in program and resource delivery

g) Assisting with the identification and securing of funding and other resources needed to assist individuals, businesses, and communities to recover quickly, safely, and with more resilience to disasters

h) Identifying and facilitating resolution of policy and program issues

i) Working to avoid duplication of assistance

j) Coordinating follow-through of recovery and hazard mitigation efforts with state, local, and tribal governments and other involved partners

k) Collaborating with Wisconsin Voluntary Organization Active in Disasters on non-governmental recovery efforts

l) Ensuring transparency and accountability in the use of recovery funds and resources

II. Recovery Support Function (RSF) Subcommittees

The WRTF consists of RSF subcommittees representing key aspects of recovery: Agriculture, Economic, Health and Social Services, Housing, Infrastructure, Mitigation, and Radiological Emergency Preparedness (REP) Recovery Ad Hoc.

II.A. Composition

The RSF subcommittees will generally consist of representatives from a Lead Agency and one or more Supporting Agencies.

II.A.1. Lead Agency

The Lead Agency representative will serve as the Subcommittee Chair.

II.A.2. Subcommittee members
Subcommittees may include additional committee members from the Lead and Supporting Agencies that:

a) Provide regional, state, tribal or federal level perspectives
b) Provide subject matter expertise relevant to pre-disaster planning and post-disaster recovery

Subcommittee members should include those individuals who are committed to the process and able to make policy decisions on behalf of the organization, or able to seek appropriate guidance and approval, when needed.

II.B. Organization

The WRTF provides a unified and collaborative operational environment for pre-disaster recovery planning and post-disaster recovery. Figure 1 illustrates the WRTF.

II.C. Agriculture Subcommittee

II.C.1. Lead agency

Wisconsin Department of Agriculture, Trade and Consumer Protection (DATCP)

II.C.2. Supporting agencies

a) Cooperative Network
b) U.S. Department of Agriculture (USDA)/Forest Service
c) U.S. Department of Agriculture (USDA)/Natural Resources Conservation Service (NRCS)
d) University of Wisconsin – Cooperative Extension
e) Wisconsin Housing and Economic Development Authority (WHEDA)

II.C.3. Mission

Identify impacts to the agriculture community and identify programs and opportunities to recover from the disaster

II.C.4. Goals

a) Identify short- and long-term agricultural-related losses and needs resulting from the disaster.
b) Identify programs and opportunities to help the agricultural community recover.

c) Get effective information out to the agriculture community on policy, legal, and financial assistance programs following a major disaster.

II.D. Economic Subcommittee

II.D.1. Lead agency
Wisconsin Economic Development Corporation (WEDC)

II.D.2. Supporting agencies
  a) Wisconsin Department of Administration (DOA)
  b) Wisconsin Department of Agriculture, Trade and Consumer Protection (DATCP)
  c) Wisconsin Department of Natural Resources (DNR)
  d) Wisconsin Department of Transportation (DOT)
  e) Wisconsin Department of Tourism
  f) Wisconsin Department of Workforce Development (DWD)
  g) Wisconsin Housing and Economic Development Authority (WHEDA)

II.D.3. Mission
Retain, restore, and rebuild Wisconsin's businesses to ensure continued economic vitality

II.D.4. Goals
  a) Assess the impact of the disaster on the economy.
  b) Collaborate with local, regional, tribal, and federal economic service agencies to address business needs.
  c) Assist affected businesses to keep them in business.
  d) Identify future economic opportunities.

II.E. Health and Social Services Subcommittee

II.E.1. Lead agency
Wisconsin Department of Health Services (WI DHS)

II.E.2. Supporting agencies
  a) American Red Cross
  b) The Salvation Army
  c) U.S. Department of Homeland Security (DHS)/Federal Emergency Management Agency (FEMA)
  d) Wisconsin Department of Administration
  e) Wisconsin Department of Children and Families (DCF)
  f) Wisconsin Department of Military Affairs (DMA)/Division of Emergency Management (WEM)
g) Wisconsin Voluntary Organizations Active in Disasters (WI VOAD)

h) Wisconsin Department of Workforce Development (DWD)

i) 2-1-1 Wisconsin/United Way of Wisconsin

II.E.3. Mission

Provide the resources and emotional support for families and communities to rebound from the effects of disaster through the enhanced coordination of agencies and organizations.

II.E.4. Goal

Identify and deliver resources and enhance partnerships through better coordination to solve public health and emergency service issues, both immediate and long-term.

II.F. Housing

II.F.1. Lead agency

Wisconsin Department of Administration (DOA)/Division of Housing (DOH)

II.F.2. Supporting agencies

a) Couleecap

b) U.S. Department of Agriculture (USDA)/Rural Development

c) U.S. Department of Housing and Urban Development (HUD)

d) U.S. Economic Development Administration (EDA)

e) Wisconsin Department of Military Affairs (DMA)/Division of Emergency Management (WEM)

II.F.3. Mission

Address the immediate, intermediate, and long-term needs of individuals and families adversely affected by major disasters, identify gaps in existing assistance programs, and try to fill the gaps with innovative programs and resources

II.F.4. Goals

a) Identify the scope of the housing need as well as the type (e.g. temporary housing, multi-family housing, single-family housing repair, housing removal and replacement).

b) Identify existing resources that can be brought to bear in addressing the needs of those adversely affected by the disaster.

c) Identify and work toward directing additional resources where assistance gaps occur.

d) Explore opportunities created by the disaster to create better affordable housing opportunities in affected communities.

II.G. Infrastructure Subcommittee

II.G.1. Lead agencies

a) Wisconsin Department of Transportation (WisDOT)

b) Wisconsin Department of Natural Resources (DNR)
II.G.2. Support agencies
   a) Cooperative Network
   b) Public Service Commission (PSC) of Wisconsin
   c) Wisconsin Department of Military Affairs (DMA), Division of Emergency Management (WEM)
   d) Wisconsin Department of Natural Resources (DNR)
   e) Wisconsin Department of Safety & Professional Services (DSPS)
   f) Wisconsin Department of Transportation (WisDOT)

II.G.3. Mission
   Maximize and expedite relief funding to repair damaged infrastructure.

II.G.4. Goals
   a) Review current activities to ensure all infrastructure needs are being assessed.
   b) Identify damage by infrastructure type.
   c) Identify available funding sources to pay for damage.
   d) Identify gaps in damage assessment activities and funding.
   e) Create standard format for reporting infrastructure damage, including lead agency.

II.H. Mitigation Subcommittee

II.H.1. Lead agency
   Department of Military Affairs/Wisconsin Emergency Management (DMA/WEM)

II.H.2. Supporting Agencies
   a) Members of the Wisconsin Silver Jackets Hazard Mitigation Team (WSJHMT)

II.H.3. Mission
   Assist communities during the recovery process to make their communities more disaster-resistant

II.H.4. Goals
   a) Minimize human, economic, and environmental disruption and reduce the potential for injury and loss of life from natural, technological, and manmade hazards.
   b) Enhance public education about disaster preparedness and resilience, and expand public awareness of natural, technological, and manmade hazards.
   c) Encourage and promote continued comprehensive hazard mitigation planning and implementation of the plan.
   d) Support coordination and collaboration among federal, state, and local authorities, and non-governmental organizations regarding hazard mitigation activities.
   e) Improve the disaster resistance of buildings, structures, and infrastructure whether new construction, expansion, or renovation.
II.I. Radiological Emergency Preparedness (REP) Recovery Ad Hoc Workgroup

It is recognized that the REP program has certain unique requirements that would need to be addressed in a radiological event. Due to these unique needs, the REP Ad Hoc Workgroup was established in the spring of 2015 and is a part of the WRTF. This workgroup is part of short- and long-term recovery planning. In a real event, the REP Workgroup would provide the radiological and scientific expertise required by the WRTF.

II.I.1. II.H.1. Lead agency
   a) Wisconsin Department of Health Services (WI DHS)
   b) Department of Military Affairs/Wisconsin Emergency Management (DMA/WEM)

II.I.2. II.H.2. Supporting Agencies
   a) Oneida Tribe of Indians of Wisconsin, Emergency Management Department
   b) Wisconsin Department of Agriculture, Trade and Consumer Protection (DATCP)
   c) Wisconsin Milk Marketing Board (WMMB)
   d) Wisconsin Department of Administration (DOA), Division of Housing (DOH)
   e) University of Wisconsin-Extension

II.I.3. II.H.3. Mission
   Radiological incidents with nuclear power plants.

II.I.4. II.H.4. Goals
   a) Integrate with all hazards planning and prepare for radiological incidents. Scientific components to be incorporated.
   b) Provide education and outreach to ingestion counties for planning, training, and exercising.

I. Introduction

I.A. Purpose

To provide accurate, coordinated, and timely information to the public in the event of an emergency or major disaster situation through the news media, state agency websites, press conferences, social media, and other communications means.

I.B. Scope

A significant emergency will involve state agencies and media organizations.

I.B.1. Public affairs – provides a single point to collect, verify, and disseminate public information.

   a) Provides timely and accurate information regarding the status of the emergency response or recovery.

      (1) In certain law enforcement-related incidents, federal, state, tribal, and local law enforcement agencies may need to withhold or delay sensitive information from public release to protect the integrity of the criminal investigation.

   b) Coordinates appropriate public information support to federal, state, local, county, and tribal governments.

   c) Coordinates the release of public information from state agencies and other groups and agencies, as appropriate.

   d) Assures the public that the state is responding to the emergency.

I.B.2. Rumor control – coordinates prompt and authoritative response or correction, or both, to trending incomplete, inaccurate, or ambiguous information related to the emergency.

I.B.3. Congressional and legislative affairs – facilitates access to disaster response and recovery information for Congressional and legislative members.

I.C. Policies

I.C.1. The lead Public Information Officer (PIO) from WEM or a PIO designee from DMA coordinates ESF 15 during a disaster. Depending upon the type of disaster, however, an alternate state agency may provide the lead PIO (e.g. the WI DHS during a public health emergency).
I.C.2. The Governor’s Office has lead responsibility as the official spokesperson for state public information activities. The lead PIO coordinates with the Governor’s Office, as appropriate.

I.C.3. ESF 15 coordinates with PIOs from federal, regional, state, local, and tribal units of government, private sector, and non-profit organizations as necessary to provide emergency public information.

I.C.4. Emergency public information activities may be managed through a Joint Information System (JIS) to coordinate and disseminate information from multiple agencies.

I.C.5. The lead PIO may enlist other state agency PIOs to serve as spokespersons on behalf of the state or on behalf of their agencies and to assist in the JIS. These activities are coordinated with the State Emergency Operations Center (SEOC) or Joint Information Center (JIC).

II. Concept of Operations

II.A. Mobilization

II.A.1. WEM public information staff will be notified of incidents that have potential state public information implications.

II.A.2. In the event the SEOC is elevated to Level 4, WEM’s PIO or a designated PIO from DMA will support the “Enhanced Monitoring Operation” coordinate ESF 15.

II.A.3. In the event the SEOC is elevated to Level 3 or above, WEM’s PIO or a designated PIO from DMA will report to the SEOC to coordinate ESF 15.

II.A.4. During mobilization of the SEOC, the WEM lead PIO or designee will notify other state PIOs to report to the SEOC or to a JIC.

II.B. Organization

II.B.1. In the event the SEOC has not been elevated, WEM’s PIO or another designated state PIO will work with state emergency management staff and the Governor’s Press Office to issue appropriate press releases and incident reports and to conduct media interviews.

II.B.2. Depending on the severity of the situation, the Governor’s Public Affairs Office will coordinate with the WEM PIO on media advisories and releases and will be available to reporters and news organizations.

II.B.3. ESF 15 may activate a JIC to coordinate and disseminate a variety of information including press releases, social media, press conferences, information for phone hotlines, and other communication tools.

II.B.4. ESF 15 may co-locate to the disaster area to support local public information efforts and in recovery operations may relocate to the Joint Field Office (JFO), as needed.

II.B.5. The lead PIO along with the SEOC manager or WEM administrator must approve all information produced by ESF 15 such as press releases, incident reports, fact sheets, and other materials.

II.B.6. The public hotline (WI-DIAL) provides a direct access to a source of official information where the public can get answers to questions, make requests, or provide comments during the response effort. The hotline also provides a feedback mechanism for response officials as an indicator of patterns, unconfirmed reports, rumors, or
incomplete, inaccurate, or ambiguous information that may need to be addressed in news releases and briefings.

II.C. ESF Activities

The WERP Basic Plan defines standardized tasks that constitute the prevention, protection, mitigation, response, and recovery responsibilities of any agency that serves a role in emergency management. This section defines those activities that are unique to ESF 15, and is intended to be used in conjunction with the common tasks outlined in the Basic Plan.

</tr>
</tbody>
</table>
Agency Functions

All other participating agencies

Agencies as a whole

• Provide PIO(s) to assist at the SEOC, scene, or JIC, as requested by the Governor, WEM, or department secretary.
• Assist the lead PIO by providing pertinent public information for dissemination to media sources and, as appropriate, fact sheets for distribution to the public.
  o Participate in news conferences and briefings on request.
  o Coordinate information with other PIO(s).
  o Monitor media broadcasts and articles for accuracy.

List of Tables

Table 1: JIC Roles and Responsibilities .................................................................................................... 9
I. Introduction

I.A. Purpose

I.A.1. Provide the media and the public with a single location from which to gain timely and accurate information about a particular event.

I.A.2. Establish guidance and assign responsibilities to ensure the maintenance of a State of Wisconsin emergency public information capability that disseminates accurate and timely information on potential and actual emergency incidents and major emergencies/disasters.

I.A.3. Provide guidance to individuals staffing a joint information center (JIC), including for an incident at a nuclear power plant with the potential to affect Wisconsin.

I.B. Assumptions

I.B.1. This plan uses the word “utility” exclusively in reference to a nuclear power plant.

I.B.2. During disasters, the public and the media will need information about the situation and instruction on any protective measures to take.

   a) In certain law enforcement related incidents, federal and local law enforcement agencies or components of the U.S. Department of Homeland Security (US DHS) may need to withhold or delay sensitive information from public release to protect the integrity of the criminal investigation.

I.B.3. Demand for information during a major disaster will be overwhelming if sufficient staff is not provided and if staff is not trained and operating from pre-established guidance.

I.B.4. The state will use multiple channels of communication during an incident, including:

   a) News releases
   b) News conferences
   c) News interviews via telephone and in person
   d) Social media and websites

I.B.5. The local media, particularly broadcast, and all media websites will perform an essential role in providing immediate and ongoing emergency instructions and information to the public.

I.B.6. Depending on the severity of the disaster, regional and national media will also cover the story and demand information and comments from state, tribal, and local officials.

I.B.7. Depending on the severity of the disaster, telephone communication may be sporadic or impossible. Local, tribal, and regional radio and television stations without emergency power may also be off the air.

I.B.8. Department of Military Affairs/Wisconsin Emergency Management (DMA/WEM) will operate a JIC during major disasters to coordinate and distribute emergency information to provide for:

   a) Informing the public of necessary protective actions to minimize loss of lives and property
b) Accommodating large numbers of media representatives seeking information about the situation and response actions

I.B.9. All public information officers (PIOs) who work for state agencies as well as the public affairs officers with DMA may be asked to report to the JIC or the state emergency operations center (SEOC), or both, during a disaster.

I.B.10. Staff from the University of Wisconsin system may assist at the JIC with social media.

I.B.11. The agencies participating in the JIC will share the information they have compiled with one another prior to media briefings.

I.B.12. The JIC monitors a variety of sources of news media, rumors, and trends to ensure that the public is receiving accurate information, including sources such as:
   a) Calls received by the Wisconsin Disaster Information Assistance Line (WI-DIAL)
   b) News broadcasts
   c) Social media
   d) Information received from the SEOC and county, tribal, and local emergency operations centers (EOCs).

I.B.13. The JIC promptly addresses trends and rumors in news releases or at media briefings.

I.B.14. For incidents involving a nuclear power plant utility:
   a) The staffing of the JIC will consist of representatives from the affected utility, the State of Wisconsin, and counties within ten miles of the affected plant.
   b) Additional representation at the JIC may consist of various federal, state, tribal, or non-governmental agencies and organizations, or local governing bodies directly impacted by the incident.

II. Concept of Operations

II.A. Notification

II.A.1. Initial notification of the SEOC elevation to Level 3 or above will come from the WEM duty officer (DO) after conferring with the senior duty officer (SDO).

II.A.2. Upon notification of SEOC elevation, the WEM PIO (or designee) will report to the SEOC and, if warranted, notify other agency PIOs of the potential for JIC activation.

II.B. JIC Mobilization (Incidents at Nuclear Power Plants)

II.B.1. The State of Wisconsin may staff a JIC in the event of a nuclear power plant incident. Potential locations include:
   a) For incidents at Point Beach Nuclear Plant (PBNP):
      3060 Voyager Drive
      Green Bay, WI 54311-8304

      This JIC facility is owned by NextEra Energy, Inc. WEM has obtained key card access, to ensure appropriate WEM staff members can access the facility at any time.
b) For incidents at Prairie Island Nuclear Generating Plant (PINGP):

   State of Minnesota
   Homeland Security and Emergency Management
   444 Cedar St., Suite 223
   St. Paul, MN 55101

c) Other sites as necessitated by the location and nature of the incident

II.B.2. “Notification of Unusual Event” (NUE) or a non-classifiable event:

   a) The SEOC may mobilize at Level 3 or higher at the discretion of the WEM administrator, SDO, or upon recommendation by the state radiological coordinator (SRC).

   b) A JIC does not generally mobilize for a NUE.

II.B.3. “Alert” Emergency Classification Level (ECL) or a higher classification -- the SEOC and the JIC may mobilize at Level 3 or higher

II.B.4. As some JICs are a considerable distance from the SEOC, PIOs representing the State of Wisconsin may deploy from other state agencies that have regional offices located near the relevant JIC to represent the State of Wisconsin/WEM.

II.B.5. Prior to JIC mobilization or arrival of state representatives to the JIC, the lead PIO from WEM may issue news releases from the SEOC. The SEOC PIO will provide copies of any media releases issued prior to JIC mobilization to other agencies at the JIC.

II.C. JIC Mobilization (All Other Incidents)

II.C.1. During major disasters, the WEM PIO will report directly to the SEOC if it is elevated to Levels 1, 2, or 3.

   a) Depending upon the situation, the WEM PIO will activate the JIC.

   b) Other state agency PIOs may deploy to the JIC to assist in the state response.

II.C.2. The JIC is the point of coordination for all state news releases and other forms of information about the disaster with approval by the SEOC manager or WEM administrator, before dissemination.

II.C.3. WEM readiness levels

   a) Level 5 and 4

      (1) WEM PIO staff members are at their normal duty section, answering media calls and issuing situation reports as needed regarding an incident.

      (2) The PIO works with the WEM DO, SDO, and WEM administrator as needed to gather information.

      (3) The WEM website, social media, and GovDelivery disseminate information.

   b) Level 3

      (1) WEM PIO reports to the SEOC and provides public information regarding a disaster.

      (2) This may include working 12-hour shifts, answering media calls, producing news releases (and in some cases situation reports), as well as updating the WEM website and social media.
(3) There may be coordination with local, tribal, federal, and private sector PIO’s.

c) Level 2 & Level 1

(1) A JIC mobilizes immediately when the SEOC opens, usually in proximity to the SEOC:

(a) To maximize all information resources

(b) To gather, verify, coordinate, and disseminate large volumes of information

(2) The necessary communication links are established and provided between the JIC and the SEOC.

(3) Communication links are coordinated between JIC staff and all field PIOs.

II.D. Coordination

II.D.1. A Joint Information System (JIS) is a network of PIOs working together via phone, email, or video-teleconference from their individual work locations or at a JIC.

II.D.2. The JIC is a location for agency PIOs to coordinate messages.

II.D.3. The JIC/JIS is a coherent system that may include:

a) State agency PIOs

b) Business, industry, and utility PIOs

c) Voluntary organization PIOs

d) PIOs from local, tribal, and federal government

II.D.4. For coordination in an emergency or disaster, it is essential that emergency public information emanate from a single point to ensure consistency and authenticity.

II.D.5. The lead state PIO, typically a WEM or DMA PIO, coordinates public information during an emergency.

II.D.6. The lead state PIO coordinates information released with the Governor’s Communications Director and other state agencies, as appropriate.

III. Procedures

III.A. General Considerations

III.A.1. The lead PIO and one or more assistant PIOs staff the SEOC and generate news releases.

a) In certain law enforcement related incidents, federal and local law enforcement agencies or components of US DHS may need to withhold or delay sensitive information from public release to protect the integrity of the criminal investigation.

III.A.2. The SEOC manager must approve and sign-off on all news releases prior to distribution.

III.A.3. Upon approval, the SEOC PIO staff sends news releases to state PIOs at the JIC for release to the media.
III.A.4. Timely, accurate release of information is a priority for the JIC. The JIC should release information:
   a) Within one to two hours of the SEOC and JIC leaders being informed of an incident.
   b) As soon as possible, preferably within an hour of the incident occurring, if the public needs life safety information.

III.A.5. The release of information may be through news interviews with media, news releases, and news conferences conveyed to the JIC in the form of:
   a) GovDelivery
   b) E-mail
   c) Posting on websites and social media
   d) Posting on a secured website such as WebEOC (for internal communications)

III.A.6. Detailed procedural checklists appear separately within a position binder that travels with the State of Wisconsin staff upon deployment to a JIC.

III.A.7. All staff at the SEOC, JIC, WI-DIAL, reception center, and shelter facilities share responsibility for noting rumors or trends.
   a) Upon recognition of a rumor or a trend, staff should bring the issue to the attention of the lead spokesperson at the JIC and the lead PIO at the SEOC.
   b) SEOC and JIC staff will take action to address the rumor or trend through a media briefing, news release, or information provided to the WI DIAL operators.

III.B. News Conferences

III.B.1. Hold news conferences daily or as needed, including representatives from appropriate agencies.

III.B.2. Coordinate news events with the Governor’s Office.

III.C. News Releases and Situation Reports

III.C.1. Update information, as necessary.

III.C.2. Date and number all situation reports.

III.C.3. Distribute information to the over 5000 media, legislative, congressional, and state agency recipients included in:
   a) WEM media lists
   b) The GovDelivery system

III.C.4. Post information to the WEM website and the ReadyWisconsin Facebook and Twitter sites.

IV. Roles and Responsibilities

IV.A. JIC Logistics

IV.A.1. News conference locations
a) During most emergency response and recovery operations, at various locations at Department of Military Affairs (DMA)/Wisconsin National Guard Joint Force Headquarters (WING), 2400 Wright Street, Madison, WI, including but not limited to Witmer Hall and the drill floor

b) During an incident at a nuclear power plant, at the JIC in either Green Bay or Minneapolis

IV.A.2. Space considerations – locate JIC as near as possible to the SEOC to:

a) Reduce errors in transmission of information

b) Increase the speed with which information can be gathered, clarified, and confirmed

IV.A.3. Equipment requirements

a) Phones

b) Computers, printers, and copiers

c) Office supplies

d) TVs to monitor media

e) Malt Box for media for news conferences

**IV.B. JIC Organization Staffing**

The roles and responsibilities of state agency staff, as outlined in the following chart, are scalable and flexible. When entities other than the State of Wisconsin own or manage JIC locations, the operational activities of each may vary slightly.

<table>
<thead>
<tr>
<th>Position</th>
<th>Functions</th>
</tr>
</thead>
</table>
| **Lead Spokesperson**   | When the lead spokesperson is an individual other than the Lead JIC PIO:  
|                         | • Represents the state at media briefings held at the JIC  
|                         | • Coordinates messages with the affected private sector partners, federal government, local or tribal government, and adjacent states (if applicable) to emphasize joint agency decision-making  
<p>|                         | • In the event of a terrorist action, the SEOC PIO will work with the FBI and other law enforcement agencies regarding the withholding of sensitive information from public release to protect the integrity of the criminal response and evidence collection process |</p>
<table>
<thead>
<tr>
<th>Position</th>
<th>Functions</th>
</tr>
</thead>
</table>
| Lead JIC PIO                   | When there is not a separate individual serving as lead spokesperson, combine those responsibilities with the following:  
• Is typically a PIO from WEM or DMA  
• Serves as the overall coordinator or supervisor for State of Wisconsin staff located at the JIC  
• Coordinates with the incident commander or SEOC manager  
• Schedules PIO staff throughout an incident to meet needs  
• Coordinates all news releases, situation reports, and social media messaging  
• Assists with coordination of news conferences  
• Attends daily briefings and reports PIO activities at briefings  
• Maintains contact with the SEOC PIO throughout the duration of the activation  
• Coordinates with other governmental and non-governmental PIOs  
• Handles and logs all media calls  
• Coordinates information with WI DIAL (when operational)  
• Keeps Governor’s Office and WEM administrator informed |
| JIC PIO (as many as needed)    | • Assists the lead JIC PIO spokesperson in carrying out all activities  
• Upon delegation by the lead JIC PIO spokesperson, represents the state at media briefings  
• Monitors news media  
• Assists with social media monitoring, as needed |
| Senior Web/Social Media/Media Monitoring PIO | • Oversees social media function (e.g. Twitter, Facebook, and website)  
• Assists with social media monitoring and developing social media monitoring reports, focusing on trends, rumors, and possible upcoming events  
• Reports critical social media postings to the lead JIC PIO spokesperson and operations immediately |
| Social Media PIO               | • Coordinates social media monitoring  
• Develops social media staffing plan  
• Produces social media messages  
• Provides information to the lead JIC PIO spokesperson for daily briefing reports |
| WEM Technical Advisor         | • Provides technical information to the lead JIC PIO spokesperson and assistant JIC PIOs on the WERP, and general emergency management practices, procedures, and laws in Wisconsin  
• Assists with various administrative tasks, as necessary |
| Radiological Technical Advisor (For Radiological Incidents Only) | • Must have a working knowledge of the Wisconsin Department of Health Services Radiological Incident Response Plan  
• Assists the lead JIC PIO spokesperson and assistant JIC PIOs by serving as a technical expert for public health matters as they relate to radiation exposure  
• Maintains contact with staff in the state radiological coordinator (SRC) room throughout the duration of the event to obtain information on dose assessment, field monitoring, health monitoring, and decontamination activities  
• May participate in news conferences at the request of the lead JIC PIO spokesperson to address media questions of a technical nature |
<table>
<thead>
<tr>
<th>Position</th>
<th>Functions</th>
</tr>
</thead>
</table>
| Administrative Support (Working Under Various Titles) | • Perform a variety of functions to assist the PIOs and technical advisors, including:  
  o Clerical work  
  o Maintaining contact with the SEOC  
  o Distributing of state and county news releases  
  o Monitoring and contributing to the WebEOC event site  
  • May include sub-categories of administrative support such as:  
    o Media line operator  
    o WebEOC support  
    o Administrative assistant |

## I. Introduction

### I.A. Purpose

To support local, county, tribal, state, non-governmental organizations (NGOs), the private sector, and volunteer efforts to respond and recovery from a catastrophic incident.

### I.B. Scope

This annex considers the emergencies and disasters likely to occur in Wisconsin or in other states but require the use of Wisconsin-based resources. The initiating incident could be a natural, man-made, or technological disaster. The determination of whether an incident is catastrophic in nature may be relative to the resources available in the area where the incident occurs.

I.B.1. Indications of a catastrophic incident include, but are not limited to:

a) Local resources overwhelmed

Local resources immediately, or almost immediately, are overwhelmed requiring immediate mutual aid from surrounding communities, the State of Wisconsin, other states, and the federal government.

b) Multiple jurisdictions affected

Multiple jurisdictions affected necessitating large-scale evacuation and shelter operations.
c) Destruction of critical infrastructure and key resources (CIKR)

Significant destruction of CIKR resulting in debilitating civic and economic disruptions.

d) Capabilities exceeded

In a catastrophic incident, it is expected that capabilities will be exceeded in one or more of the following areas:

1) Mass care

   Ability to manage and provide food and shelter to a large, displaced, and possibly contaminated evacuee population.

2) Search and rescue

   If the incident involves collapsed structures, local resources may be overwhelmed requiring national search and rescue teams, along with a certain level of expertise.

3) Decontamination

   A WMD incident that may involve contamination, state, tribal, and local resources may be overwhelmed due to the characteristics of the substance requiring both air quality monitoring and the large number of evacuees, vehicles, and facilities that require decontamination.

4) Public health and medical support

   There may be significant issues related to health and public health needs, including mental health and potential isolation as well as quarantine requirements. Medical support will be needed at established medical facilities as well as evacuation points, shelters, and field support to emergency responders.

5) Medical equipment and supplies

   Depending upon the nature of the incident, available supplies such as pharmaceuticals and treatments may be unable to meet the demand. There may be insufficient numbers of qualified medical personnel to treat the affected population.

6) Victim and fatality management and transportation

   The number of casualties are likely to overwhelm the capacities of local medical facilities.

7) Debris management

   The damage and amount of debris left from the incident is so extensive that local and regional capabilities are exceeded. The type of debris may require technical assistance to deal with environmental and contamination issues.

8) Public information

   The need for providing on-going, consistent, and clear public information may overwhelm local resources requiring additional resources. Accurate and continuous information is needed to assuage mass confusion and panic. Depending upon the scope and dimensions of the incident, there may be the need to provide information on a national scale.
I.C. Definitions

I.C.1. Catastrophic incident

a) The National Response Framework (NRF) defines a catastrophic incident as,
“...any natural or manmade incident, including terrorism, that results in extraordinary levels of mass casualties, damage, or disruption severely affecting the population, infrastructure, environment, economy, national morale, or government functions.”

b) It is understood that what might be considered a catastrophic incident in one area may not be so in another area depending upon the availability of resources and the overall impact on the area.

I.D. Policies

The policies used in a catastrophic incident and this annex are found in the Wisconsin Emergency Response Plan (WERP), Basic Plan, Section III – Policies.

II. Planning Assumptions

This annex is generally focused on the implications of a catastrophic incident on the state’s 12 largest metropolitan areas. However, the response concepts can be applied to incidents that affect any large area of the state.

II.A. Assumptions

II.A.1. A catastrophic incident in an urban or metropolitan area, or over an expansive geographical area, would result in many casualties (either immediately or over time), a large number of evacuees with many requiring mass care, or both.

II.A.2. The local and tribal jurisdictions and state agencies will have to manage the initial response and recovery operations for the first 72 hours while other mutual aid agencies and federal resources mobilize and respond.

II.A.3. The lack of immediate availability or limited resources may result in a prioritized response and adjusted standards of care.

II.A.4. Damage to critical infrastructure such as transportation, communications, and utilities systems may isolate some communities, creating islands within the disaster area.

II.A.5. Local and tribal jurisdictions have identified and cataloged essential response and recovery assets.

II.A.6. Some guidelines for certain ESFs may be modified or streamlined to address the magnitude or urgent requirements of the incident.

II.A.7. Jurisdictions within Wisconsin’s six emergency management regions have created, executed, and exercised mutual aid agreements and contracts.

II.A.8. Any necessary evacuations will be conducted in accordance with local, tribal, and state evacuation plans.
II.A.9. There may be large-scale evacuations, either organized or self-initiated, that will require shelter. A large number of people and pets may be left temporarily or permanently homeless requiring temporary long-term housing.

II.A.10. Shelters that have been previously identified in the impacted area(s) may not be available. This may necessitate using shelters outside of the impacted area(s) or setting up temporary shelters using tents, trailers, or both, dependent upon weather conditions.

II.A.11. All local plans are compliant with the Americans with Disabilities Act and include provisions integrated throughout appropriate annexes or essential support functions for meeting the functional needs of individuals within their jurisdictions in the areas of:

a) Maintaining independence
   Support for obtaining consumable medical supplies, durable medical equipment, service animals, and attendants or caregivers.

b) Communications
   Adaptive communications systems to compensate for hearing, vision, speech, cognitive, or intellectual limitations, and limited English language proficiency.

c) Transportation
   Support for individuals who cannot drive or who do not have access to a vehicle. This may include a requirement for accessible vehicles with special equipment lifts or oxygen.

d) Supervision
   Additional support due to the loss of caregivers, family, or friends, particularly if the evacuee has dementia, Alzheimer’s, or psychiatric conditions. Children separated from parents or legal guardians will present the need for supervision. The type and amount of supervision will depend upon their age and medical condition.

e) Medical care
   Trained, specialized professionals to assist with medical care, such as terminal or contagious conditions, intravenous therapy, tube feeding, dialysis, oxygen and suction administration, wound management, and power-dependent life-sustaining equipment.

II.A.12. All local plans include provisions integrated throughout appropriate annexes or essential support functions to provide for the evacuation and sheltering of service animals and household pets in accordance with the Animal Response Plan, Attachment 1 to ESF 11.

II.A.13. Public safety and emergency response personnel that normally respond to emergencies and incidents may be among those affected and unable to perform their duties.

II.A.14. A catastrophic incident is likely to have long-term impacts within the affected area(s) and to a lesser extent to the state and nation.
III. Concept of Operations

III.A. General
The WERP serves as the guiding document during a catastrophic incident and provides a general concept of operations necessary to prepare for, respond to, recover from, and mitigate emergencies throughout the state.

III.B. Specific Considerations
Operations in response to a catastrophic incidents may also be shaped by the following considerations:

III.B.1. Local, county, tribal, and state jurisdictions may be severely compromised. State and federal governments may need to assist with the continuity of operations in both the public and in private sector.

III.B.2. Local, county, and tribal governments may be unable to establish an effective command structure. In these circumstances:
   a) The state and federal government may find it necessary to take a bigger role in the management of the incident than would occur in other disasters.
   b) The state, in consultation with the remaining elements of the local or tribal government, may establish a unified command structure using an incident management team (IMT).
   c) The state will transition back to its normal support and coordination of the incident once the impacted jurisdiction(s) are capable of assuming incident command.

III.C. Timeline
A catastrophic incident will necessitate a very dynamic response and recovery requiring plans and strategies to be flexible in order to address immediate or changing needs. Due to the very nature of catastrophic incidents, there may be overlaps between phases and they may not adhere to the listed periods.

III.C.1. Initial Response (0 – 72 hours)
   a) Response originates with the affected jurisdiction or tribe and the county in which the jurisdiction is located.
   b) Immediate mutual aid comes from the other counties in that WEM region and state agencies.
   c) The affected county coordinates mutual aid from within its region, if possible.
   d) The initial response elements of the federal government begin to arrive at this time.
   e) Work begins on rescue, recovery, and mitigation activities.

III.C.2. Extended Response (3 – 60 days)
   a) Mutual aid comes from the other WEM regions, state agencies, federal response elements, and from other states via the Emergency Management Assistance Compact (EMAC) or from Canadian provinces via the State and Province Emergency Management Assistance Compact.
b) The state coordinates mutual aid that comes from outside the affected region.

c) The preliminary damage assessment (PDA) is conducted.

d) The state or tribe applies for a federal disaster declaration.

e) Repairs begin on any damaged or destroyed CIKR.

f) Work continues on recovery and mitigation activities.

III.C.3. Short Term Recovery (0 – 3 months)

a) Administration of the federal disaster declaration continues.

b) Repairs to infrastructure networks continue.

c) Individuals and businesses, working with disaster assistance and insurance funds, continue to rebuild and repair homes and businesses.

d) Mitigation and environmental considerations are integrated into reconstruction activities.

e) The Wisconsin Recovery Plan is partially or fully implemented to guide short- and long-term recovery activities.

III.C.4. Long Term Recovery (> 3 months)

a) Continued partial or full implementation of the Wisconsin Recovery Plan, as needed.

III.D. Situations

The Threat and Hazard Identification and Risk Assessment (THIRA) process identified 13 threats and hazards that could plausibly occur in the state and would have a significant effect on the state.

III.D.1. Threats and Hazards

a) Severe weather (including tornadoes and high winds, hail, and lightning)

b) Flooding (including dam failure, landslide, and land subsidence)

c) Wildfire

d) Drought and extreme heat

e) Winter storms and extreme cold

f) Coastal erosion and bluff failure

g) Radiological release

h) Hazardous material incident (including fixed facilities and transportation)

i) Emerging infectious disease (including pandemic influenza)

j) Cyber-attack

k) Terrorism (including active shooter incidents and civil disturbances)

The state THIRA provides additional information for each of the identified threats and hazards including catastrophic scenarios and estimated impacts.

III.D.2. Impacts

The catastrophic impacts that could result from these incidents include:
Wisconsin Emergency Response Plan
Catastrophic Incident Annex

a) Extraordinary number of injuries or fatalities
b) Required evacuation and mass care of a large population
c) Extended disruptions to public safety, health systems, and commerce
d) Extraordinary amount of damage to CIKR, some of which may take extended time to repair
e) Significant disruption or damage to food and agricultural products
f) Extraordinary amount of resources or time that public safety and other critical services will be needed to recover from the incident

III.D.3. Out-of-state incidents:

a) Wisconsin is part of the Illinois-Indiana-Wisconsin Combined Statistical Area (IL-IN-WI CSA) FEMA V Regional Catastrophic Planning Team (RCPT), which provides planning, preparedness, and coordination for a catastrophic incident that may occur in a large metropolitan area.
b) There are two nuclear power plants in neighboring states with evacuation zones that fall within the borders of Wisconsin.
c) Catastrophic incidents out-of-state could necessitate Wisconsin-based resources and materials to respond via requests made through the EMAC and other agreements to the affected state during the emergency, such as in the case of a hurricane or tornado.
d) Catastrophic incidents out-of-state or in Canada could result in a large number of people being evacuated through or to Wisconsin requiring state resources and materials.

III.D.4. There may be multiple incidents that occur simultaneously within non-contiguous areas dispersed over a large geographic area or multiple jurisdictions such as severe weather or terrorist incidents.

III.D.5. A catastrophic incident may occur with little or no warning and be well underway before it is detected, such as in the case of a cyber attack.

III.D.6. An accurate scope or magnitude of the incident may not be available for at least 24 to 48 hours after the incident. As a result, response activities will need to begin without the benefit of a detailed or complete assessment of critical needs.

III.E. Mobilization Triggers

III.E.1. The size or complexity of the incident exceed the capabilities that can be brought to bear with available resources.

III.E.2. The local authorities or tribes request state assistance or are unable to provide an adequate response nor have the resources for an incident of this magnitude within their jurisdiction.

III.F. Organization

The emergency response flowchart can be found in the WERP Basic Plan.
III.G. Annex Activities

The WERP Basic Plan defines standardized tasks that constitute the prevention, protection, mitigation, preparedness, response, and recovery responsibilities of any agency that serves a role in emergency management. A catastrophic incident is usually of such a large scale that all ESFs found in both the WERP and the federal ESFs will be referred to in the incident. For specific roles and responsibilities refer to the WERP Basic Plan, ESFs, and Annexes.

IV. Agency Responsibilities

IV.B. Wisconsin Governmental Support Agencies

<table>
<thead>
<tr>
<th>Agency</th>
<th>Functions</th>
</tr>
</thead>
</table>
| **Department of Administration** | **Response**  
Agency as a whole  
Agency functions as found in ESFs 1, 2, 3, 5, 6, 7, 12, 13, and 14. Specifically:  
- Provide assistance with business continuity.  
- Provide relocation assistance of state agencies and functions, as required.  
- Coordinate the funding of state agency assets, as needed.  
- Provide or assist in obtaining needed products and services from surplus property, state contracted vendors, or other outside vendors for emergency equipment and supplies.  
- Capitol Police  
  - Provide security at state capitol along with state buildings and facilities.  
  - Assist local or tribal law enforcement.  
  - Assist with dignitary protection.  
- Resources  
  - Provide Capitol Police staff to support law enforcement functions, if available.  
  - Maintain a listing of available government owned or leased space.  
  - Provide various state transportation resources.  
  - Listing of vendors for goods and services that are available in emergencies  
  - Staff of architects and engineers to assist in damage assessment |
| **Department of Agriculture, Trade & Consumer Protection** | **Response**  
Agency functions as found in ESFs 2, 5, 6, 7, 8, 10, 11, 12, 13, 14, and 15. Specifically:  
- Management of household pets and service animals that have been evacuated  
- Provide expertise when the incident involves the release of agricultural chemicals and clean up.  
- Provide laboratory support for analysis of cultures, specimens, or other materials that could support evidence of a terrorist attack.  
- Provide a liaison to the U. S. Department of Agriculture (USDA) on related animal/human diseases and food or water supply contamination caused by a terrorist attack.  
- Conduct field investigations and lab assessments on animal disease outbreaks, including those that could be transmitted to humans.  
- Provide inspectors for sampling and testing in the incident of suspect food and water supply contamination.  
- Resources  
  - Toxic spill and foreign/domestic animal disease response teams  
  - WI Veterinary Diagnostic Laboratory (foreign/domestic animal disease response)  
  - Consumer protection hotline |
<table>
<thead>
<tr>
<th>Agency</th>
<th>Functions</th>
</tr>
</thead>
</table>
| **Department of Children & Families** | Response  
Agency functions as found in ESFs 5, 6, and 14. Specifically:  
- Human services in support of children and families.  
- Emergency childcare placement.  
- Reunification of children with their parents or legal guardians.  

Resources  
- State related recovery programs  
- Child care workers and investigators |
| **Department of Corrections**  | Response  
Agency functions as found in ESF 13. Specifically:  
- Security and possible evacuation of correctional facilities that are within the affected area(s).  
- Selection and supervision of inmates that may assist in the incident.  
- Possible relocation of inmates within the affected area(s).  

Resources  
- Trained corrections staff that may be able to supplement certain law enforcement functions  
- Provide specially selected inmates to assist in disaster prevention and recovery activities. |
| **Department of Health Services** | Response  
Agency functions as found in ESFs 2, 5, 6, 7, 8, 10, 11, 12, 13, 14, and 15. Specifically:  
- Emergency medical services.  
- Mass care.  
- Health inspections.  
- Mobilization of the National Disaster Medical System (NDMS).  
- Deployment of volunteers.  

Resources  
- Radiation protection services and monitoring |
| **Department of Justice** | Response  
Agency functions as found in ESFs 2, 3, 5, 10, and 13. Specifically:  
- Provide a liaison between the SEOC and Wisconsin Statewide Information Center (WSIC), Joint Terrorism Task Force (JTTF), and federal law enforcement resources.  
- Provide assistance or assume lead agency role in terrorism incident or disasters that involve criminal activities.  

Resources  
- Legal staff to assist with related matters  
- Intelligence operations to maintain operational awareness  
- State fire marshals  
- Criminal justice investigators  
- Crime scene and evidence laboratory services and technicians |
| **Department of Natural Resources** | Response  
Agency functions as found in ESFs 2, 3, 4, 5, 7, 8, 9, 10, 11, 12, 13, 14, and 15. Specifically:  
- Law enforcement support services.  
- Search and rescue services.  
- Assistance in the cleanup and removal of debris.  
- Air, water, and waste treatment monitoring. |

Agency & Functions

Wisconsin Housing & Economic Development Authority
Response
Agency functions as found in ESFs 6 and 14. Specifically:
- Provide assistance with business continuity.
- Provide assistance with temporary and long-term housing for displaced individuals and families.

Resources
- Assist in providing financial assistance and low cost loans for small businesses, farms, rental properties, and housing to those displaced.
- Staff with expertise in financial matters related to the recovery efforts.
- Assist in coordinating financial assistance from both the federal and private sectors.

Department of Military Affairs: Wisconsin National Guard
Response
Agency functions as found in all 15 ESFs. Specifically:
- Liaison with other military support units providing specialized services according to each unit’s capabilities.

Resources
- May provide numerous support services in both personnel and equipment as listed in ESF 13.

Department of Transportation: Wisconsin State Patrol
Response
Agency functions as found in ESFs 10, 12, and 13. Specifically:
- Provide staff for traffic control and law enforcement support activities.
- Coordinate traffic evacuation routes with WisDOT.
- Assist with search and rescue.

Resources
- State troopers and truck inspectors
- Aerial support

IV.C. Non-Governmental Support Organizations

I. Response Issues

I.A. Direction and Control/Incident Command
Refer to Basic Plan and ESF 5
Set up incident command/unified command, span of control, and unity of command.
(Incident Command Post/Area Command → Local emergency operations center (EOC) → State emergency operations center (SEOC) → Federal Joint Field Office (JFO))

I.B. Sizing Up the Incident
Determine the size of the area(s) affected, individuals affected, critical infrastructure damaged, any contamination, and the economic impact.

I.C. Search and Rescue
Refer to ESF 8 and 9
Rescue the injured, search for victims, medical triage, and recovery of victims.
(Need for specialized teams WI Task Force-1 (WI TF1) and National Urban Search & Rescue Teams)

I.D. Evacuation and Shelter
Refer to ESF 1, 6, and Mass Evacuation Annex
Inform people of the areas that should be evacuated.
   I.D.1 Activate human services and American Red Cross (ARC) shelter plans.
   I.D.2 Provide for functional needs individuals, service animals, and pets.
   I.D.3 Establish evacuee tracking system.
   I.D.4 Determine procedures for return to the evacuated area, when appropriate.

I.E. Damage Assessment
Refer to ESF 3 and 5
Activate damage assessment team composed of people familiar with property value.
   I.E.1 Damage assessment will be required to secure state and federal assistance.
   I.E.2 Delivery of state and federal assistance will be based upon documented needs.

I.F. Public Information
Refer to ESF 15
Designate public information officer (PIO) to provide information to the media and work with the joint information center (JIC).
   I.F.1 Establish a location and time to meet with the media away from the EOC.
I.F.2 Keep survivors informed of the status of the response and the recovery.

I.G. Tracking Survivors’ Needs
Refer to ESF 6 and 14
Designate someone to keep track of requests for assistance and the delivery of that assistance.

I.H. Tracking Offers of Assistance
Refer to ESF 7
Be prepared to deal with voluntary help both for organized groups and self-deployed individuals along with donations of all types including money.
   I.H.1 Designate someone to keep track of offers of assistance.
   I.H.2 Discourage shipments of unsolicited donated goods.
   I.H.3 Identify a location to store donated goods.

I.I. Debris Clean Up and Disposal
Refer to ESF 3
Work with DNR on proper disposal of debris and inform the public of proper separation and disposal of debris.

I.J. Obtaining Outside Assistance (Mutual Aid)
Refer to ESF 3, 4, 9, and 13
Activate local mutual aid agreements or agreements through the Wisconsin Mutual Aid Box Alarm System (MABAS-WI), Emergency Police Services (EPS), or request additional aid through the standard emergency operations center (SEOC).

I.K. Determining Public Health Issues
Refer to ESF 6, 8, and 11
Address health issues such as safe water and food, disease, and mental health as they relate to both survivors and responders.

I.L. Site Security and Credentialing or Pass System
Refer to ESF 13
Establish security of the incident site(s) and a credentialing or pass system for access to these areas during the response and recovery of the affected areas.

II. Response Timeline

II.A. Onset to 2 Hours
   II.A.1 Establish incident command system.
II.A.2 Notify all of the agencies with a role in the plan.
II.A.3 Determine the size and nature of the area affected by the disaster.
II.A.4 Determine the number of people, critical infrastructure, and businesses affected by the disaster.
II.A.5 Secure the area and limit access to emergency responders.
II.A.6 Conduct search and rescue operations, as needed.
II.A.7 Inform the hospital(s) of potential casualties.
II.A.8 Open shelters, as needed.
II.A.9 Set up traffic control for the area providing emergency access and evacuation routes, if necessary.
II.A.10 Begin clearing main roads and streets for emergency access.
II.A.11 Begin to determine the types and amount of outside assistance you may need and activate mutual aid agreements.
II.A.12 Notify the county emergency management director.
II.A.13 Notify Department of Military Affairs/Wisconsin Emergency Management (DMA/WEM).
II.A.14 Begin public information activities and issue protective actions for the public, if necessary.
II.A.15 Plan for command staff briefings.
II.A.16 Consult agency response checklist.
II.A.17 Consider the need to declare a state of emergency.

II.B. 2 to 4 Hours

II.B.1 Continue:
   a) Search and rescue operations, if necessary.
   b) Public information activities.
   c) Shelter operations, as needed.
   d) Clearing main roads and streets.
   e) Maintain the security of the area and limit access.

II.B.2 Consider the need for 24-hour operations and the establishment of 12-hour shifts.
II.B.3 Plan and implement continued long term security of the area.
II.B.4 Begin establishing a credentialing/pass system.
II.B.5 Activate damage assessment teams.
II.B.6 Assign people to:
   a) Handle requests for assistance from evacuees.
   b) Assist with the functional needs of evacuees.
   c) Provide for evacuee tracking and request for information on disaster victims.
d) Track offers of assistance and donations.
II.B.7 Determine how debris will be disposed.
II.B.8 Begin to determine the public health effects of the disaster.
II.B.9 Begin to take care of the needs of the first responders.
II.B.10 Consult agency response checklist.
II.B.11 Hold command staff briefings.

II.C. 4 to 12 Hours
II.C.1 Consider the need for ongoing mutual aid.
II.C.2 Activate the credentialing/pass system.
II.C.3 Continue:
   a) Search and rescue operations, if necessary.
   b) Plan and implement continued long-term security of the area.
   c) Public information activities.
   d) On-going reports to the SEOC.
   e) Tracking the request for assistance and the functional needs of evacuees.
   f) Tracking request for information on disaster victims.
   g) Tracking offers of assistance and donations.
   h) Shelter operations, as needed.
II.C.4 Take debris to an appropriate landfill.
II.C.5 Begin damage assessment activities.
II.C.6 Prepare a prioritized list of repairs to critical facilities and transportation routes.
II.C.7 Begin cleanup activities.
II.C.8 Address the public health needs of the disaster victims and responders.
II.C.9 Take care of the health and safety needs of the responders.
II.C.10 Coordinate with utilities in the restoration of service.
II.C.11 Anticipate and address public health issues.
II.C.12 Conduct command staff briefings.
II.C.13 Prepare for the next shift to take over.
II.C.14 Brief the next shift.

II.D. 12 to 24 Hours
II.D.1 Consider the need for ongoing mutual aid.
II.D.2 Continue:
   a) Operations listed in previous time periods, if necessary.
   b) Operation of the credentialing/pass system, if necessary.
c) Damage assessment activities.

d) Cleanup activities.

e) Taking debris to an appropriate landfill.

f) Coordinating with utilities in the restoration of service.

g) To anticipate and address public health needs.

h) Tracking requests for information on disaster victims.

II.D.3 Keep records of agency expenses.

II.D.4 Compile the information collected by the damage assessment teams and submission of uniform disaster situation report (UDSR).

II.D.5 Begin repairs to critical facilities.

II.D.6 Conduct command staff briefings during each shift.

II.D.7 Brief the next shift.

II.E. 24 to 48 Hours

II.E.1 Continue:

   a) Operations listed in previous time periods, if necessary.

   b) Consider the need for ongoing mutual aid.

   c) Damage assessment activities and submit UDSR.

   d) Repairs to critical facilities.

   e) Considering the need for ongoing mutual aid.

   f) Shelter operations, as needed.

   g) Keeping records of agency expenses.

II.E.2 Coordinate activities of volunteers assisting with clean up efforts.

II.E.3 Begin planning for reentry and long-term recovery.

II.E.4 Conduct command staff briefings during each shift and provide briefings to the next shift.

II.E.5 Prepare for the opening of essential facilities and businesses.

II.F. 48 Hours to Conclusion of Operations

II.F.1 Provide updated damage estimates to the state.

II.F.2 Continue:

   a) Operations listed in previous time periods, if necessary.

   b) To coordinate with utilities in the restoration of service.

   c) Shelter operations, as needed.

   d) Planning for reentry and long-term recovery.

   e) Coordinating the activities of volunteers assisting with clean up efforts.
II.F.3 Provide people to participate in the preliminary damage assessment.
II.F.4 Prepare for and begin to allow evacuees back to their residences.
II.F.5 Conduct command staff briefings during each shift and provide briefings to the next shift.

III. County/Tribal/State Response Guidelines

III.A. Initial Response

III.A.1 Affected county or tribe.
   a) To the extent possible, begin implementation of emergency response plans and activate local EOC.
   b) Request law enforcement mutual aid through EPS.
   c) Activate fire service mutual aid through the MABAS-WI. or local mutual aid agreements.
   d) Begin to address the issues listed in the Response Checklist, Attachment 1, Sections I and II.
   e) Notify other counties in the region of the incident and request that they activate their local EOC to begin the coordination of mutual aid.
   f) Begin damage assessment.
   g) Request that a county director from the region report to local EOC to assist with the coordination of initial mutual aid from within the region.
   h) Identify one or more staging areas for incoming mutual aid.
   i) Coordinate mass evacuation and sheltering activities with the other counties in the region.
   j) Evacuate facilities with functional needs populations.
   k) Activate your medical needs shelters.
   l) Coordinate with adjacent counties on evacuation routes that lead into their counties.
   m) Assign a PIO to the JIC.
   n) Notify the WEM duty officer (DO) of the scope of the incident and identify immediate mutual aid needs.

III.A.2 Assisting counties or tribes.
   a) May activate local EOC upon notification by the affected county, if necessary.
   b) Review your emergency operations plan and the Response Checklist, Attachment 1.
   c) Begin to activate and stage the resources identified by the affected county or tribe.
   d) Coordinate the delivery of mutual aid with the affected county or tribe.
   e) Coordinate with the affected county or tribe on evacuation operations and the receipt and sheltering of evacuees from the affected jurisdiction.
   f) Open shelters that serve the functional and medical needs of the evacuees, as needed.
g) Notify WEM DO or SEOC if operational upon the activation of the local EOC.

III.A.3 State agencies

a) Upon notification by the affected county or tribe, WEM will notify state agencies of the incident, elevate the SEOC, and begin to implement the state emergency response plan.

b) The WEM regional director for the affected region will report to the affected local EOC. Other WEM regional directors may be dispatched to the affected county or tribe.

c) WEM may activate a Multi-Agency Coordination (MAC) element to provide on-scene coordination of respective state agency support to local disaster response and recovery efforts.

d) State agencies will notify their staff of the need to supply assistance to the affected county.

e) WEM will dispatch the emergency police services (EPS) coordinator and fire services coordinator to the affected county or tribe with the state mobile command post and other WEM communications assets and to assist in providing law enforcement and fire mutual aid, as needed.

f) WEM may notify the EPS area directors of the impending need for law enforcement mutual aid.

g) WEM may activate hazardous materials taskforces through the Wisconsin Hazardous Materials Response System.

h) WEM will coordinate assignment of state PIOs to the JIC.

i) WEM will notify all of the counties of the situation and advise them to be prepared for request for mutual aid.

j) State agencies will begin assessment of the situation in preparation for a request of federal disaster assistance.

k) WEM will notify FEMA of the incident and make initial request for federal assistance and support items through the U.S. Department of Homeland Security (US DHS).

l) WEM will coordinate the activation of a staging area for federal response elements and mutual aid received through the Emergency Management Assistance Compact (EMAC).

m) WEM will begin to request assistance through EMAC, if needed.

n) State agencies will coordinate with federal response elements as they arrive in the state.

III.A.4 Federal agencies

a) The federal government will activate and deploy response elements identified in the National Response Framework, if the incident is declared an Incident of National Significance.

b) The FEMA Region V office in Chicago will activate the regional response coordination center (RRCC), make contact with the SEOC, and begin coordinating the federal response to the incident.

c) A FEMA liaison will report to the SEOC within six hours.
d) Federal response personnel reporting to the SEOC will follow standard log-in procedures.

e) FEMA Region V may dispatch an incident management assistance team (IMAT) that includes appropriate ESF representatives to assess the situation, collect damage information, determine immediate federal support requirements, and make preliminary arrangements to set up federal field operations.

f) US DHS and FEMA will dispatch federal assets depending upon the situation.

III.B. Extended Response

III.B.1 Affected county or tribe.

a) Continue response operations addressing the issues on the response checklist and identify additional issues that need to be addressed.

b) Identify critical unmet needs and inform the SEOC of the continuing need for mutual aid (state agencies coordinate mutual aid from outside the region).

c) Identify and prioritize critical infrastructure for repair.

d) Continue shelters and medical needs shelter operations, as needed.

e) Begin to identify longer term housing for those who need it.

f) Participate in joint field office (JFO) operations.

g) Continue participation in the JIC.

III.B.2 Assisting counties and tribes.

a) Continue local EOC, if opened, to assist the affected county or tribe.

b) Continue to provide mutual aid, as needed.

c) Continue to assist with sheltering and medical needs operations, as needed.

III.B.3 State agencies

a) Continue response efforts in support of the affected county or tribe.

b) Coordinate mutual aid from other counties from other WEM regions, federal resources, and EMAC.

c) Continue law enforcement mutual aid through EPS.

d) Continue to assist in the delivery of fire service mutual aid.

e) Continue the delivery of hazardous materials support through the Wisconsin Hazardous Materials Response System, as needed.

f) Assist the affected county or tribe in identifying longer term housing.

g) Participate in the JFO operations.

III.B.4 Federal agencies

a) Coordinate the delivery of federal assistance with local and state officials.

b) Continue JFO and JIC operations.
III.C. Short Term Recovery

III.C.1 Activate the Wisconsin Recovery Task Force (WRFT) (see Attachment 2) and its subcommittees.

III.C.2 Have the counties and tribes submit updated uniform disaster situation reports (UDSRs).

III.C.3 Conduct the preliminary damage assessment (PDA) with FEMA.

III.C.4 Identify mitigation projects as indicated in the state and county hazard mitigation plans.

III.C.5 Begin the administration of the major presidential disaster declaration with FEMA and the affected counties and tribes.

III.C.6 Conduct applicant briefings for the counties and tribes that qualify for public assistance.

III.C.7 Begin case management for individuals in the counties and tribes covered by the disaster declaration.

III.C.8 Assign staff to the JFO and the disaster recovery centers (DRCs).

III.C.9 Conduct recovery planning meetings in the affected counties and tribes.

III.C.10 Begin work on public assistance projects.

III.C.11 Work with Wisconsin Voluntary Organizations Active in Disaster (WI VOAD) to address the unmet needs of citizens.

III.C.12 Begin to work with community development block grants (CDBGs) and other sources of funding to assist communities and individuals affected by the disaster.

III.D. Long Term Recovery

III.D.1 Continue to administer the presidential disaster declaration.

III.D.2 Continue to assign staff to the JFO and the DRCs, if they remain open.

III.D.3 Continue the activities of the WRTF.

III.D.4 Continue to conduct recovery meetings with the counties and tribes.

III.D.5 Continue to work on public assistance projects.

III.D.6 Begin work on mitigation projects.

III.D.7 Continue case management for individuals in the counties covered by the presidential declaration.

III.D.8 Continue working with CDBGs and other sources of funding to assist communities and individuals affected by the disaster.

III.D.9 Continue to work with WI VOAD to satisfy the unmet needs of individuals affected by the disaster.

   II.A. Strategic National Stockpile .................................................................................................. 5
   II.B. National Urban Search and Rescue Response System ......................................................... 6
   II.C. National Disaster Medical System ........................................................................................ 6
Intentionally left blank
I. Incident Command

The federal incident command/unified command level will depend upon the size, type, and impact of the catastrophic incident.

I.A. Field level

   I.A.1 Joint Field Office (JFO)
   I.A.2 Joint Field Office Coordination Group (JFOCG)

I.B. Regional level

   I.B.1 Regional Response Coordination Center (RRCC)

I.C. National level

   I.C.1 Interagency Incident Management Group (IIMG)
   I.C.2 Homeland Security Operations Center (HSOC)
   I.C.3 National Response Coordination Center (NRCC)

II. Resources

After determining the size of the area(s) affected, individuals affected, critical infrastructure damaged, and any contamination including the ability to receive the materials, the U.S. Department of Transportation (US DOT) will coordinate the movement of supplies and resources.

II.A. Strategic National Stockpile

The Centers for Disease Control and Prevention (CDC) Strategic National Stockpile (SNS) is the nation’s largest supply of potentially life-saving pharmaceuticals and medical supplies for use in a public health emergency severe enough to cause local supplies to run out. Organized for flexible response, the stockpile is structured in four categories:

   II.A.1 Managed Inventory
   
   The majority of stockpile assets are held in storage and kept as managed inventory. Managed inventory can be used to provide additional specific items following a previously deployed 12-hour Push Package or as an initial response, depending on the situation.

   II.A.2 12-hour Push Package
   
   If a community experiences a large-scale public health incident in which the disease or agent is unknown, the first line of support from the stockpile is to send a 12-hour Push Package. Push Packages contain a broad-range of pharmaceuticals and medical supplies. Contents are pre-packed and configured in transport-ready containers for rapid delivery anywhere in the United States within 12-hours of the federal decision to deploy.

   II.A.3 CHEMPACK
CHEMPACKs are containers of nerve agent antidotes placed in secure locations at local levels around the country to allow rapid response to a chemical incident. More than 90% of the United States population is within one hour of a CHEMPACK location. Most are located in hospitals or fire stations selected by local authorities to support a rapid hazmat response and can be accessed quickly if hospitals or first responders need them.

II.A.4 Federal Medical Station

A Federal Medical Station is a non-emergency medical center set up during a natural disaster to care for displaced persons with special health needs (e.g., chronic health conditions, limited mobility, common mental health issues) that cannot be met in a shelter for the general population during an incident. The modular and rapidly deployable reserve of beds, supplies, and medicines provides equipment to care for 50–250 people for three days before resupply is needed. Federal Medical Stations operate through the cooperation of local, state, and federal authorities and require pre-planning and pre-identification of potential locations, based on specific selection criteria.

II.B. National Urban Search and Rescue Response System

There are many participants in the National Urban Search and Rescue Response System. These participants can be grouped into three main categories:

II.B.1 FEMA

Establishes policy and leads the coordination of the national system.

II.B.2 Task Forces

There are 28 FEMA Urban Search and Rescue Task Forces spread throughout the continental United States trained and equipped by FEMA to handle structural collapse.

II.B.3 Incident Support Teams

Support the Urban Search and Rescue Task Forces in accomplishing their mission through logistical, electronic, and coordination expertise.

II.C. National Disaster Medical System

The National Disaster Medical System (NDMS) is a federally-coordinated healthcare system and partnership of the Departments of Health and Human Services (HHS), Homeland Security (DHS), Defense (DoD), and Veterans Affairs (VA). The purpose of NDMS is to support local, tribal, state, and territorial authorities following disasters and emergencies by supplementing health and medical systems and response capabilities. NDMS response teams include the following:

II.C.1 Disaster Medical Assistance Team (DMAT)

A DMAT is a group of professional and para-professional medical personnel designed to provide medical care during a disaster or other event. DMATs are designed to be a rapid-response element to supplement local medical care until other federal or contract resources can be mobilized, or the situation is resolved.

II.C.2 Disaster Mortuary Operational Response Team (DMORT)

DMORTs are composed of private citizens, each with a particular field expertise, who are activated in the event of a disaster. Teams are composed of funeral directors, medical examiners, coroners, pathologist, forensic anthropologists, medical records
technicians and transcribers, fingerprint specialists, forensic odontologist, dental assistants, x-ray technicians, mental health specialists, computer professionals, administrative support staff, and security and investigative personnel. DMORTs work under the guidance of local authorities by providing technical assistance and personnel to identify and process deceased victims.

a) Disaster Portable Morgue Unit (DPMU)

The HHS maintains three DPMUs in support of the DMORT program. Each DPMU contains a complete morgue with designated workstations for each processing element and prepackage equipment and supplies. The DPMUs are staged at locations on the East and West coast for immediate deployment in support of DMORT operations.

II.C.3 International Medical Surgical Response Team (IMSURT)

The IMSURT is a NDMS team of medical specialist who provide surgical and critical care during a disaster or public health emergency. IMSURT personnel are federal employees used on an intermittent basis to deploy to the site of a disaster or public health emergency.

II.C.4 National Veterinary Response Team (NVRT)

The NVRTs are comprised of individuals with diverse expertise, including veterinarians, animal health technicians, epidemiologists, safety officers, logisticians, communications specialists, and other support personnel. NVRT members are private citizens who have been hired as intermittent federal employees and activated in the event of a disaster. A NVRT provides assessments, technical assistance, public health, and veterinary services under the guidance of state and local authorities.

I. Introduction

I.A. Purpose

To provide guidance to state agencies for the support of local and tribal governments for the removal and disposition of debris caused by a major disaster or catastrophic incident. Further, guidance is provided to facilitate and coordinate the management of debris following a disaster in order to mitigate against potential threats to the lives, health, safety, and welfare of impacted individuals. It is intended to expedite recovery efforts in the impacted area(s).

I.B. Scope

I.B.1. In a major disaster or catastrophic incident, the amount of debris resulting from the incident may exceed the local government’s ability to dispose of the various materials.

I.B.2. Local governments may have a difficult time locating staff, equipment, and funds required for the short and long-term removal of debris.

I.B.3. Either natural or manmade disasters will produce a variety of debris that will include such things as trees, sand, gravel, construction materials, vehicles, and personal property. Some of this debris may be contaminated, be a hazardous substance, or have evidentiary value, based upon the type of incident.

I.B.4. The quantity and type of debris, its location, and the size of the area over which it is dispersed will have a direct impact on the type of collection and disposal methods used to address this issue, associated costs, and how quickly this issue can be addressed.

I.B.5. Private contractors will play a significant role in the debris collection, removal, and disposal process.

I.B.6. The debris management program will need to follow various environmental policies along with both state and federal legal requirements.

I.C. Assumptions

I.C.1. A major disaster or catastrophic incident that requires the removal of a large amount of debris from public and private lands and waters could occur at any time.
I.C.2. The scale of the debris removal, reduction, and disposal process resulting from such a disaster or incident will exceed the capabilities of the local jurisdiction(s) and possibly the state.

I.C.3. The governor or tribe will declare a state of emergency that will authorize state resources, including the WING, to assist in the debris management operation. The governor may waive or suspend some legal requirements regarding the disposal of debris.

I.C.4. The governor or tribe may request a Presidential Disaster Declaration if the disaster or incident exceeds both the capabilities of local and state resources, which will provide federal resources and expertise regarding debris management.

II. Concept of Operations

II.A. Mobilization Triggers

This annex attachment may be activated when:

II.A.1. The disaster or catastrophic incident overwhelms the resources of the local jurisdiction(s) and they request state assistance.

II.A.2. The complexity of the debris management operation requires specialized resources.

II.A.3. The governor, the adjutant general, or the WEM administrator determines that conditions in the state warrant activation.

II.B. Organization

II.B.1. The debris management operation will function as a part of the incident command system according to the WERP Basic Plan and ESF 5.

II.B.2. There may be a Debris Management Task Force (DMTF) established, with specific duties and responsibilities as defined by the state emergency operations center (SEOC), depending upon the size of the disaster or catastrophic incident.

II.C. Debris Classification

II.C.1. Burnable debris: Consists primarily of trees and vegetation including, but not limited to

   a) damaged and disturbed trees
   b) bushes and shrubs
   c) broken, partially broken and severed tree limbs

   Burnable debris does not include construction materials and demolition materials or garbage.

II.C.2. Burnable construction debris: Consists of non-creosote structural timber, wood products, and other materials designated by the DNR and the Environmental Protection Agency (EPA).

II.C.3. Non-burnable debris: Consists of various construction and demolition materials such as creosote structural timber, plastic, glass, rubber, metal products, sheet rock,
roofing shingles, carpet, tires, and other materials that may be designated by the DNR and the EPA. Garbage will be considered non-burnable debris.

II.C.4. Garbage: Waste that is regularly picked up by local jurisdiction. Common examples of garbage are food, packaging, plastics, and papers.

II.C.5. Stumps: Are tree remnants exceeding 24 inches in diameter, but not taller than 18 inches above grade, to include the stump ball. Any questionable stumps shall be referred to the DNR.

II.C.6. Ineligible debris: Consists of materials that are to remain in place including, but is not limited to, chemicals, petroleum products, paint products, asbestos, and power transformers.

II.C.7. Note: Should terrorism or criminal activity be suspected as the cause of a major disaster or catastrophic incident, individuals involved in the debris removal operation must always be aware of potential criminal evidence that could be found within the debris.

II.C.8. Further, valuable personal property may be found within the debris, such as legal documents, jewelry, photos, etc., and should be separated. In either of these cases, law enforcement officials should be contacted immediately.

II.D. Removal Activities

There are two phases in the removal of debris.

II.D.1. Phase I: Consists of the clearance of the debris that hinders immediate lifesaving actions being taken within the disaster area or that poses an immediate threat to public health and safety.

a) Identify critical routes that are essential to emergency operations.

b) Prioritize efforts among local agencies.

c) Identify areas that state and federal assistance can target.

d) Roadway debris removal on emergency routes consists of moving the debris to the shoulders of the road. There is no attempt to physically remove or dispose of the debris, but only to clear access to expedite:

(1) Rescue or removal of victims and other individuals in the affected area.

(2) Movement of emergency vehicles.

(3) Resumption of critical services, primarily fire/police stations and the emergency operations center (EOC).

(4) Assessment of damage to key public facilities, utilities, medical facilities, and other critical infrastructure.

e) List the type of debris and amount that may be encountered as identified by Damage Assessment Teams through a zone-by-zone survey.

f) Establish priorities in clearing debris to open other critical community facilities, such as municipal buildings, water plants, wastewater treatment plants, power generation units, and airports.

g) Other considerations:
Immediate debris clearance actions should be supervised by local public works staff using all available resources.

Requests for additional assistance should be made through the SEOC.

Special chainsaw crews will be required to remove some downed trees, based upon the manner in which they were damaged. Utility company staff may be required to work with the chainsaw crews due to the possibility of live electric lines within the downed trees.

Personnel working in the disaster area will wear all necessary protective equipment.

II.D.2. Phase II: Consists of operations for the removal and disposal of debris that are determined necessary to ensure the orderly recovery of the area(s) and to eliminate less immediate threats to the public health and safety.

a) Transition of Phase I operations to Phase II requires assembling the needed public and private resources to remove the debris.

b) Determine what state and federal resources will be required.

c) Begin removing the debris along the critical emergency routes, being aware that additional debris of various kinds may have been added by individuals clearing private property.

d) Develop field inspection teams to monitor the debris removal activities, serving as the “eyes and ears” in the field for the EOC.

e) Conduct daily briefings with key debris removal supervisors ensuring a coordinated effort continues.

f) Coordinate requested traffic control with law enforcement authorities to expedite debris removal activities.

g) Establish a proactive information plan with emphasis placed on what the public can do to expedite the cleanup process, such as the separation of debris, where to place or bring debris, and how to report illegal dumping or dumping sites.

II.D.3. Private property debris removal: Dangerous structures should be the responsibility of the owner, but experience has shown that these structures may remain hazardous due to a lack of insurance, absentee landlords, or the owner being unable to afford the costs of demolition. In most cases, these structures will need to be removed to protect the health and safety of adjacent residents. In order to assist in the removal of these structures:

a) Develop ordinances that can be activated in emergencies to authorize the removal of dangerous structures and eliminate any unnecessary waiting periods.

b) Provide a Demolition of Private Property checklist to include photographs of the site before and after demolition.

c) Develop procedures to ensure cooperation with numerous local and state agencies to comply with such items as historical preservation, asbestos removal, lead-based paint removal, and hazardous household waste removal.

d) Develop procedures to ensure that private contractors have the proper qualifications and any required licensure.
e) Work with an on-site member of FEMA staff to ensure that all required legal actions are taken.

II.D.4. Household hazardous waste removal: Will be generated as a result of a major disaster or catastrophic incident and can consist of common household chemicals, propane tanks, oxygen bottles, batteries, and various other chemicals. These items will mix in with the other debris materials and require attention during the debris removal and disposal process. Some actions that may be taken include:

a) Consider the possible use of local or state hazardous materials response teams that are assigned to areas that will respond prior to the removal process.

b) Coordinate with regulatory agencies concerning possible regulatory waivers and other emergency response requirements.

c) Have plans for salvageable hazardous materials to be collected and segregated based upon their use. Properly trained personnel or qualified private contractors should be used for this task.

d) Maintain a list of qualified private contractors that can safely remove these hazardous materials.

II.E. Debris Removal Sites

II.E.1. Temporary debris storage and reduction sites: Are locations to temporarily store, reduce, segregate, or process debris before it is hauled to its final location. These sites are normally the responsibility of the local governments and are generally established and operated through contracts with private companies.
II.E.2. Temporary debris storage site – closeout procedures: Each temporary debris storage and reduction site will eventually need to be closed and restored to its previous condition and use. The contractor must assure the contracting local jurisdiction that the site has been properly remediated. This will require a final environmental site evaluation and testing. The agreement with the site operating contractor should contain provisions that assure the site has been remediated.

II.F. Annex Activities

The WERP Basic Plan defines standardized tasks that constitute the prevention, protection, mitigation, response, and recovery responsibilities of any agency that serves a role in
emergency management. This section defines those activities that are unique to this annex, and is intended to be used in conjunction with the common tasks outlined in the Basic Plan.

III. Agency Responsibilities

III.A. Lead Coordinating Agency – Department of Military Affairs

Table 5: Lead Coordinating Agency Functions

<table>
<thead>
<tr>
<th>Agency</th>
<th>Functions</th>
</tr>
</thead>
</table>
| Department of Military Affairs: Wisconsin Emergency Management | • Coordinate the overall debris management operation among the various state, tribal, and federal agencies in support of the local jurisdiction(s) affected by the disaster or incident.  
• Assist in promptly identifying and coordinating the clearance of impediments on emergency routes and contacting responsible parties to remove the impediment.  
• Coordinate the mobilization of personnel and equipment required for engineering services related to the debris management operation.  
• Assist with the development of emergency contracts with private vendors or companies to support the debris removal operation.  
• Coordinate the overall removal of debris on roadways, railroads, airstrips, etc., critical for emergency vehicle passage depending upon the scope of the disaster or incident. |

III.B. Wisconsin Governmental Support Agencies

Debris Management
Management of Debris Resulting from Natural Disasters or Planned Demolition Activities
PUB-WA 601
Revised July 2016

Appendix 1
Demolition Debris Management

Each year, severe storms destroy homes, barns and other buildings across Wisconsin. In a crisis, emergency management of debris places yet another burden on property owners and emergency managers. Typically, a great deal of demolition debris needs to be managed in a short period of time.

The Wisconsin Department of Natural Resources is concerned with public health, safety, and environmental impacts when demolition debris is mismanaged. The Solid Waste Program offers assistance to communities in managing storm-generated debris, and to individuals interested in razing a single structure.

Typical types of waste generated from both natural disasters and planned demolition activities, along with proper disposal methods, are listed below.

CLEAN\(^1\) SOIL, BRICK, BUILDING STONE, CONCRETE, BROKEN ASPHALT PAVEMENT, WOOD WASTE FROM DWONED TREES, AND UNPAINTED OR UNTREATED WOOD.

These items may be disposed of without Department approval as long as the site selected does not impact surface waters, wetlands, floodplains, and critical habitat areas. Contact waste staff for assistance on locating an appropriate disposal site. The term “clean” refers to material that is unainted, untreated, and not contaminated with petroleum or other contaminants.

Communities should consider composting or chipping smaller wood waste for use in landscapes damaged by the storm event or offering clean wood waste for use as firewood. Clean brick, building stone, concrete and asphalt may be stockpiled for crushing and reuse in future building projects.

ROOFING METALS, SIDING, AND OTHER METALS INCLUDING APPLIANCES

This material may be easily recycled and therefore should be stockpiled and hauled to a scrap metal recycler. Some appliances may contain hazardous substances such as Freon. Freon must be removed by qualified and licensed personnel and items containing Freon or other hazardous substances should be stockpiled separately from other metals. You may want to consider incorporating a list of metal and appliance recyclers into each County Emergency Plan.

ASBESTOS CONTAINING MATERIALS: SIDING, FLOORING, ROOFING AND INSULATION

Asbestos containing items normally require special handling by licensed personnel and proper disposal. You should always contact your local Air Management Specialist for details on proper identification and handling of materials containing asbestos. Please see the statewide contact list on the reverse side for this assistance.

HAZARDOUS WASTE IN THE FORM OF PAINTS, SOLVENTS, FUELS AND PESTICIDES

Many municipalities have collection programs capable of handling household hazardous wastes. If your community does not have a household hazardous waste program, arrangements can be made with an outside contractor to establish a household hazardous waste disposal drop-off and collection service. You should always contact your local DNR Waste Staff for details and assistance in obtaining approval by using the list of contacts on the reverse side. Staff can also assist communities with questions regarding proper management and disposal of contaminated soil.

GLASS, ASPHALT AND FIBERGLASS ROOFING, CARPETING AND PAD, INSULATION, PVC PIPING, SIDING, DRYWALL, PLASTER AND PERSONAL ITEMS SUCH AS CLOTHING AND FURNITURE

Items that cannot be recycled or reused require disposal in a local licensed landfill, or an approved one-time disposal or construction and demolition landfill site.

OPEN BURNING

Open burning of tree\(^1\), wood, brush, and other clean wood waste is an option, but requires prior DNR approval or concurrence; however, this may not be the best option. Open burning results in the release of contaminants to the air, water and land, and may have an adverse impact on human health and the environment. Also, a fire spreading out of control is always a serious concern and stretches needed emergency personnel even thinner. A wild fire resulting from open burning activities could cost you money, if the local fire department is called out to suppress the fire. Chipping, composting, and using clean wood waste for firewood should be the options considered first!

There is no substitute for careful planning before an emergency occurs. Emergency planning should include a current list of DNR contacts that can assist communities in an emergency. These plans may also identify the location and transportation routes to licensed disposal facilities and household hazardous waste collection facilities. Similarly, communities should identify areas where clean wood wastes, metals and clean concrete, block, brick, etc. may be segregated for proper management once the emergency has subsided. Communities may consider pursuing the development of an approved small demolition landfill.
DNR Air and Waste Management Program Contacts

NORTHEAST REGION (NE) includes the following counties:
Brown, Calumet, Door, Fond du Lac, Green Lake, Kewaunee, Manistee, Marinette, Marathon, Menominee, Oconto, Outagamie, Shawano, Waupaca, Waushara, Winnebago
Waste Management Contact: Valerie Joosten (920) 662-5486
Air Management Contact: Inelda Hofmeister (920) 424-7884
or ask for the Waste or Air Management contact at (920) 662-5100

NORTHERN REGION (NO) includes the following counties:
Ashland, Barron, Bayfield, Burnett, Douglas, Florence, Forest, Iron, Langlade, Lincoln, Oneida, Polk, Price, Rusk, Sawyer, Taylor, Vilas, Washburn
Waste Management Contacts: 1Valerie Joosten (920) 662-5486 or 1Jill Schoen (715) 839-2788
Air Management Contact: 1Susan Lindem (608) 999-9978 or 1Rick Walt (920) 662-5181
or ask for the Waste or Air Management contact at (715) 635-2101 or (715) 365-8900

SOUTH CENTRAL REGION (SC) includes the following counties:
Columbia, Dane, Dodge, Grant, Green, Iowa, Jefferson, Lafayette, Richland, Rock, Sauk
Waste Management Contact: Cynthia Moore (608) 275-3466
Air Management Contact: Tom Roudnush (608) 275-5603
or ask for the Waste or Air Management contact at (608) 275-3266

SOUTHEAST REGION (SE) includes the following counties:
Kewaunee, Manitowoc, Ozaukee, Racine, Sheboygan, Washington, Waushara
Waste Management Contact: Matt Maribe (262) 574-2143
Air Management Contact: 1Kendra Fisher (262) 219-7335 or 1Dan Schraun (414) 243-8620
or ask for the Waste or Air Management contact at (414) 263-8500

WEST CENTRAL REGION (WC) includes the following counties:
Adams, Buffalo, Chippewa, Crawford, Clark, Dunn, Eau Claire, Jackson, Juneau, La Crosse, Marathon, Monroe, Pepin, Pierce, Portage, St. Croix, Trempealeau, Vernon, Wood
Waste Management Contact: Jill Schoen (715) 839-2788
Air Management Contact: 1Susan Lindem (608) 999-9978 or 1Rick Walt, (920) 662-5181
or ask for the Waste or Air Management contact at (715) 839-3700

If you need assistance from Department of Natural Resources staff during non-business hours please call the emergency hotline at 1-800-943-0003 press 1 when prompted and ask the DNR Duty Officer to contact a local DNR representative to assist you.

I. Introduction

I.A. Purpose

This annex describes policies, roles, and responsibilities, and the concept of operations for prioritizing, protecting, and restoring critical infrastructure and key resources (CIKR) of the State of Wisconsin. This annex details processes to ensure coordination and integration of CIKR-related activities among public and private emergency management partners.

I.B. Scope

I.B.1. This annex provides guidance on the identification, protection, and recovery of critical infrastructure within the State of Wisconsin to state, local, tribal, and private sector stakeholders.

I.B.2. The CIKR annex takes an all-hazards approach to assess vulnerabilities, minimize risk, and enhance the resilience of critical infrastructure and key resources within the State of Wisconsin.

I.B.3. For the purpose of this annex, the following definitions apply:

a) The term “all-hazards” means a threat or an incident, either natural or manmade, warranting action to protect life, property, the environment, public health, or safety including natural disasters, cyber related incidents, industrial accidents, pandemics, acts of terrorism, sabotage, and criminal activity targeting CIKR assets.

b) The term “critical infrastructure” means those facilities, systems, and other assets deemed vital to the public confidence and to Wisconsin. Loss or incapacity of critical infrastructure would have a debilitating impact on the state’s security, public health, economy, safety, or well-being.

c) The term “key resources” means publicly or privately controlled resources essential to the state’s economy or the operation of government.

Table 1: Coordinating and Support Agencies

<table>

<th>Department of Military Affairs/Wisconsin Emergency Management (DMA/WEM)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Wisconsin Governmental Support Agencies</td>
<td>Department of Administration (DOA) Department of Agriculture Trade and Consumer Protection (DATCP) Department of Justice/Wisconsin Statewide Intelligence Center (WI DOJ/WSIC) Department of Financial Services (DFI) Department of Health Services (WI DHS) Department of Natural Resources (DNR) Wisconsin National Guard (WING) Public Service Commission (PSC) Department of Transportation (DOT) Department of Financial Institutions (DFI)</td>
</tr>
</tbody>
</table>
d) The term “resilience” means the ability to resist, absorb, adapt to, and recover from adverse change.

I.B.4. Determining which assets within a jurisdiction are “critical” is both art and science. Each level of government may develop criteria for what assets are considered “critical” to their jurisdiction.

I.C. Policies

I.C.2. It is the responsibility of state, local, and tribal government, and private sector agencies to identify and protect the CIKR assets they own.

I.C.3. This annex does not alter or supersede existing:

   a) Statutory responsibilities for CIKR protection, incident management, emergency management, or other related functions under the law.
   b) Regulatory, contractual, or other legal relationships between state, local, and tribal agencies and the private sector.
   c) International agreements, treaties, or other agreements for incident management or between the U.S. Government and other countries.

I.C.4. All levels of government should partner with private sector CIKR owners, when possible, to help insure the resiliency of both publicly and privately-held critical infrastructure.

I.C.5. Emergency managers at the state, tribal, county, and local levels must be aware of the presence of CIKR assets in their jurisdiction.

II. Planning Assumptions

II.A.1. CIKR assets in Wisconsin are vulnerable to a number of natural, technological, and manmade threats. The WERP Basic Plan details various natural and technological hazards CIKR assets are most likely to face.

II.A.2. Damage to critical infrastructure in one sector may have a cascading impact on infrastructure within other sectors.

II.A.3. Private sector entities own approximately eighty-five percent (85%) of CIKR assets nationally with government owning only approximately fifteen percent (15%).1 It is reasonable to assume that the percentage of public and private ownership percentages in Wisconsin are similar.

II.A.4. Prevention, protection, mitigation, response, and recovery efforts are most effective when the public and private sectors cooperate.

---

II.A.5. Each level of government has different criteria for determining what qualifies as CIKR.

II.A.6. Assets or facilities deemed critical at the state level may not be considered critical at the federal level. Similarly, assets or facilities deemed critical at the county, tribal, or local level may not be considered critical at the state level.

II.A.7. Critical infrastructure in one sector may differ vastly from critical infrastructure in another. In order to accurately identify assets which are vital to the state’s (or other jurisdiction’s) security, public health, economy, safety, and well-being, it may be necessary to develop specific CIKR criteria for each sector.

III. Concept of Operations

III.A. General

III.A.1. A wide variety of natural, technological, and human-caused threats and hazards can impact Wisconsin’s critical infrastructure. This annex prompts the mobilization of state, local, tribal, and private sector entities to:

a) Identify CIKR assets in the State of Wisconsin and evaluate potential risks and vulnerabilities in a manner consistent with the Critical Infrastructure Risk Management Framework included in the National Infrastructure Protection Plan (see Figure 1 below).

b) Monitor the potential impact of natural and manmade incidents on CIKR assets in Wisconsin.

c) Share information regarding threats and potential incident impacts with relevant agencies (law enforcement, emergency management, etc.), as appropriate.

d) Initiate response and recovery efforts for Wisconsin’s critical infrastructure during natural or manmade incidents.

e) Partner with other private sector and government entities to protect and facilitate recovery of CIKR.

Figure 1: Information Sharing

Source: 2013 National Infrastructure Protection Plan
III.B. Mobilization Triggers

III.B.1. Monitoring and information sharing activities outlined in this annex occur at all times and do not require a trigger for implementation.

III.B.2. Response and recovery elements of this annex may be implemented when:
   a) There is a perceived natural, technological, or human-caused threat and hazard to CIKR assets within the State of Wisconsin.
   b) CIKR assets, at any level of government, have been damaged, degraded, or destroyed, and local or tribal resources are likely to be exhausted by corresponding response or recovery activities.

III.C. Organization

III.C.1. CIKR assets fall into one of 16 sectors including:
   a) Chemical
   b) Commercial Facilities
   c) Communications
   d) Critical Manufacturing
   e) Dams
   f) Defense Industrial Base
   g) Emergency Services
   h) Energy
   i) Financial Services
   j) Food and Agriculture
   k) Government Facilities
   l) Healthcare and Public Health
   m) Information Technology
   n) Nuclear Reactors, Materials, and Waste
   o) Transportation Systems
   p) Water and wastewater systems

III.C.2. At the state level, WEM hosts a Critical Infrastructure Workgroup comprised of members from multiple state agencies representing each of the CIKR sectors. The CIKR Workgroup meets at least annually (and as necessary) to:
   a) Develop criteria for the state CIKR list
   b) Review state agency submissions and build the state CIKR list, as appropriate
   c) Make prioritization recommendations for the state CIKR list
   d) Provide input to federal data call requests, as necessary

III.C.3. County, tribal, and local governments may use their own methods for identifying assets which are critical to their jurisdictions.
III.D. CIKR Monitoring & Information Sharing:

III.D.1. Wisconsin Emergency Management: WEM maintains situational awareness of CIKR assets throughout the state during natural and manmade incidents. If CIKR assets are threatened during an incident, the WEM Duty Officer (DO) or SEOC ensure appropriate response actions are initiated.

a) WEM utilizes the EAGLE-I system to monitor energy infrastructure status throughout the state of Wisconsin.

b) WEM regional directors and county emergency managers report CIKR-related incidents through the WEM DO, WebEOC, or SEOC, as appropriate.

III.D.2. Wisconsin National Guard Joint Operation Center (WI-JOC): The WI-JOC serves as the focal point for WING domestic operations by maintaining situational awareness via a common operational picture (COP), serving as a centralized communications and coordination node, and providing a command and control platform for contingency response operations. The WI-JOC is manned 24/7, 365 days a year.

a) The WI-JOC gathers and shares information through Situation Reports to WING, WEM, and public and private partners, to ensure their situational awareness and facilitate effective decision-making.

III.D.3. The Wisconsin Statewide Intelligence Center (WSIC): As Wisconsin’s primary fusion center, WSIC works in partnership with the U.S. Department of Homeland Security (US DHS) and the Federal Bureau of Investigation (FBI), as well as partners from other federal, state, local, tribal agencies, and the private sector, to gather information and produce intelligence products for federal, state, local, tribal government agencies, the private sector, and the public. WSIC shares information to ensure CIKR asset owners and other agencies are informed of threats, as appropriate.

a) The WSIC Threat Liaison Officer (TLO) and Fusion Center Liaison Officer (FLO), and Cyber Liaison Officer (CLO) programs are statewide initiatives to work with federal, state, tribal, and local agencies as well as the private sector to provide training and serve as a mechanism for the TLOs and FLOs to submit suspicious activity reports (SARs) to WSIC in order to detect, prevent, and respond to both criminal and terrorism-related activities.

b) WSIC disseminates cyber threat information through its robust distribution network. Intelligence is disseminated both for situational awareness and for specific threats to CIKR. Through the implementation of the governance authority of this strategy, WSIC will utilize the subject matter experts or “authorized agents” identified for each of the CIKR sectors to disseminate cyber threat intelligence.

III.D.4. Department of Administration, Division of Enterprise Technology – Enterprise Service Desk: The Enterprise Service Desk monitors the state cyber-domain on a 24-hour basis for threats or disruptions using a variety of automated systems. DET ESD notifies the state chief information security officer of any detected or suspected threat or attack against state information technology assets.

III.D.5. Wisconsin Public Service Commission: The PSC serves as a point of contact for the energy sector (primary) and water and wastewater sector (alternate). When appropriate, the PSC partners with other state agencies and the private sector to facilitate response and recovery activities.
III.D.6. Wisconsin Department of Agriculture, Trade, and Consumer Protection (DATCP): DATCP monitors food and agriculture sectors and provides information to other agencies as required throughout an incident.

III.D.7. Department of Transportation: The DOT operates the Traffic Management Center (TMC) on a 24/7 basis. TMC monitors conditions on Wisconsin’s highways and roadways and disseminates information to other agency partners as necessary. State agencies and the public can access travel information via the Wisconsin 511 website or by phone at (866) 511-9472.

III.D.8. Wisconsin Department of Health Services: DHS monitors the healthcare and public health sectors and serves as the lead agency for ESF 8 Health and Medical Services. DHS provides information to other agencies as required throughout an incident involving critical healthcare and public health facilities as well as radiological emergencies (see Radiological Nuclear Annex).

III.D.9. County, local, and tribal emergency managers: County, local, and tribal emergency managers maintain situational awareness of CIKR within their jurisdictions.

III.D.10. Private sector CIKR asset owners: Private sector CIKR asset owners monitor their own facilities and sites and report suspicious activity or incidents in accordance with established legal requirements at the federal, state, and local level.

III.E. Response to Incidents Involving CIKR Assets in Wisconsin:

III.E.1. DMA/WEM: At the state level, WEM operates the State Emergency Operations Center (SEOC) and coordinates state agency response to incidents involving CIKR assets. The SEOC also coordinates response activities with private sector entities via the Business Emergency Operations Center (BEOC).

III.E.2. DOA: During a state of emergency declared by the Governor involving a cyber-incident, the Governor may designate DOA as the lead state agency. If CIKR assets are involved, DOA will work with the SEOC and other state agencies to share information about potential secondary impacts of cyber events to facilitate efficient response.

III.E.3. WSIC: WSIC coordinates information sharing between DET and WEM, state, local, tribal law enforcement agencies, and other units of government. WSIC also coordinates information sharing with affected private sector entities, the US Intelligence Community including the U.S. Department of Homeland Security and federal law enforcement.

III.E.4. DMA/WING: When requested and authorized, the Wisconsin National Guard assists state, local, and tribal authorities with incident response activities related to CIKR assets including:

a) Cyber response – See Cyber-incident Response Annex

b) Physical security – See ESF 13 – Public Safety and Security

c) Other support as authorized

III.E.5. Private sector CIKR stakeholders: Private sector CIKR stakeholders collaborate with federal, state, local, and tribal authorities to facilitate response to a wide variety of CIKR-related incidents. Private sector CIKR asset owners are usually responsible for restoration of the CIKR assets they own (e.g. utilities restore power for their customers during an outage). Private sector CIKR entities often provide restoration timeline estimates to federal, state, local, and tribal entities as needed throughout an incident to assist response decision making.
III.E.6. **County and local government**: County, tribal, and local emergency managers respond to incidents involving CIKR facilities within their jurisdictions. County, tribal, and local government emergency managers request assistance from outside entities as needed to enable incident stabilization and recovery.

**III.F. Recovery of CIKR assets and nodes:**

III.F.1. Recovery activities and timelines may vary widely depending upon the type of assets that have been damaged or destroyed in an incident. Some CIKR assets can be restored in a matter of hours while others may take weeks or months to be restored. All levels of government and private sector partners must:

a) Facilitate physical recovery of CIKR assets, nodes, or capabilities.

b) Provide support to affected communities as necessary in accordance with the State of Wisconsin Recovery Plan.

c) Incorporate lessons learned from incidents into planning and mitigation strategies.

**III.G. Annex Activities**

<table>
<thead>
<tr>
<th>Phase</th>
<th>Action Item</th>
<th>Agency</th>
</tr>
</thead>
<tbody>
<tr>
<td>Prevention, Protection, and Mitigation Activities</td>
<td>• Along with WSIC, WING, and other emergency management partners, monitor threats (manmade and natural) against CIKR assets. Information sources include but are not limited to:  o Daily, weekly, and special bulletins from WSIC  o Reports to the WEM duty officer (DO)  o Inputs from county and tribal emergency managers and WEM regional directors  o Open source media reports from WEM PIO  • Share information regarding CIKR assets with WSIC, WING, and other emergency management partners, as appropriate.  • Convene the CIKR workgroup annually to establish a list of facilities, clusters, and systems that are critical to the State of Wisconsin.  • Respond to US DHS and other federal data calls related to Wisconsin’s CIKR assets and nodes.  • Work with private sector CIKR owners to develop information sharing and incident response procedures.</td>
<td>DMA/WEM</td>
</tr>
<tr>
<td></td>
<td>• Participate with WEM in an annual US DHS data call to:  o Establish a list of facilities, clusters of facilities, or asset systems that are critical to Wisconsin.  • Along with WEM, maintain situational awareness of threats against CIKR assets using:  o Analysis developed by WSIC staff  o Inputs from the Southeastern Wisconsin Threat Analysis Center (STAC) in Milwaukee.  o Inputs from other fusion center partners  • Share information regarding CIKR assets with STAC, WEM, DMA/JOC, and other fusion center partners, when appropriate.</td>
<td>WI DOJ/ WSIC</td>

### I. Introduction

#### I.A. General

I.A.1. The state’s essential and emergency services, as well as its critical infrastructure, rely on the uninterrupted use of the internet and communications systems, including data, monitoring, and control systems.

I.A.2. Wisconsin faces an evolving array of intentional or unintentional cyber-based threats. Unintentional threats can be caused by software upgrades or defective equipment that inadvertently disrupts systems. Intentional threats can be both targeted and untargeted attacks by criminal groups, hackers, terrorists, organization insiders, and foreign nations engaged in crime, political activism, or espionage and information warfare.

I.A.3. Protecting against cyber-attacks is complicated by the fact that attackers do not need to be physically close to their targets and can easily remain anonymous, among other things. The magnitude of the threat is compounded by the ever-increasing sophistication of cyber-incident techniques, such as incidents which combine multiple techniques.

I.A.4. Given the interconnected nature of computer networks, responding to cyber threats is a shared responsibility by the whole community. Collaboration, communication, and engagement between the public and private sectors and across state, local, and tribal jurisdictions is essential to detect and identify, protect against, respond to, and recover from cyber-incidents.

I.A.5. Many elements of cyber-incident response are similar to other types of natural or technological emergencies. Wisconsin’s approach to cyber-incident response is consistent with an all-hazards approach by integrating and building upon the all-hazards response capabilities already in place.

#### I.B. Purpose

I.B.1. This annex, an element of the Wisconsin Emergency Response Plan (WERP) provides a scalable, flexible framework for preparing for, responding to, and recovering from a significant cyber-incident by:
a) Identifying roles, responsibilities, and actions required to respond to a significant cyber event, both public and private.

b) Organizing cybersecurity efforts among public and private critical infrastructure/key resource (CIKR) sectors.

c) Describing the coordination structure that integrates the Senior Policy Advisors Group, Cybersecurity Management Team, and the Wisconsin Cyber Strategy & Planning Working Group.

d) Establishing a framework for information sharing as well as effective and resilient communications systems and protocols to ensure continuity of communications during and after cybersecurity events.

e) Providing guidance to counties, tribes, and local units of government regarding available state assets and resources.

I.C. Scope

I.C.1. This annex describes the framework for coordination and execution within which state agencies:

   a) Proactively protect and defend state-owned data systems and networks.

   b) Assist local and tribal units of government in a cyber-related incident, as required by §323.01 of the Wisconsin Statutes.

   c) Coordinate with private sector partners.

I.C.2. The annex is not intended to supersede or replace state agency plans and procedures. Users are responsible for being familiar with and implementing their agency's standing plans and procedures.

I.C.3. The annex is a strategic plan for operational coordination and execution among state, local, and tribal (SLT) governments, the private sector, and other partners. It describes authorities, capabilities, and processes that can be utilized to enable prevention, protection, response, and recovery in the cyber domains. Although steady-state activities and the development of a cyber common operational picture are key components of this annex, the plan focuses primarily on building the mechanisms needed to coordinate intra-Wisconsin resources.

I.C.4. This annex is intended to be scalable, ensuring a unified and coordinated response to any cyber-incident, including a significant cyber incident (SCI). A significant cyber-incident as defined by Presidential Policy Directive 41 (PPD 41) “is one that either singularly or as part of a group of related incidents is likely to result in demonstrable harm to the national security interests, foreign relations, or economy of the United States or to the public confidence, civil liberties, or public health and safety of the American people.” An SCI at the SLT level will closely parallel the federal definition. However, an SCI within Wisconsin may not meet the criteria of a federal definition but still meet the conditions requiring a state coordinated response.

I.C.5. This annex takes a whole-community approach. It encompasses both the state of Wisconsin, as a government enterprise (to include local units of government and tribes), and CIKR partners critical to the protection of the health, safety, and economic vitality
of the lives, organizations, and business in the state of Wisconsin. In all cases, cyber-incident response activities will be conducted in accordance with applicable laws, regulations, and policies. Nothing in this annex restricts, supersedes or otherwise replaces the legal authorities or regulatory responsibilities of any government agency or organization. All information will be handled, transmitted, distributed, released, and stored in accordance with the standards, caveats, and procedures described by the originating agency, regulatory governance, and law.

I.C.6. This annex describes thresholds between a cyber-incident and an SCI (see Table 2). Subsequently, the plan describes when the Senior Policy Advisors Group (policy group) and the Wisconsin Cyber Incident Security Management Team (cyber security team) convene and how their actions guide the remainder of the response. The policy group and cyber security team do not take the place of Wisconsin Emergency Management (WEM) in response to natural disasters. They assist WEM with planning during long-term cyber-based disruptions. The plan is applicable if a physical event ultimately causes a cyber disruption.

I.C.7. The annex is intended to develop broad concepts focused on Wisconsin’s interface with federal agencies including:

a) US DHS Office of Cyber Security and Communications including the National Communications System (NCS), the NCS National Coordinating Center (NCC), National Cyber Security Division (NCSD), the NCSD United States Computer Emergency Readiness Team (US-CERT), and Office of Emergency Communications (OEC).

c) Federal Bureau of Investigation (FBI)

I.C.8. For the purposes of this annex, see the following definitions.

a) ‘Cyber’ refers to the relationship between computer hardware and software including electronic tablets, smartphones, and other similar devices as well as the interconnections between them for the collection, electronic storage, and dissemination of information.

b) ‘Cyberspace’ means the electronic environment for information transfer including public and private local and wide area networks and the internet.

c) ‘Cyber-incident’ means an occurrence related to computers, servers, controls, electronic files, email systems, software, networks, or the internet requiring a response to protect life, property, the environment, or the economy.

d) The ‘Cyber-environment’ includes all physical and virtual assets in cyberspace.

e) ‘Cyber-threat’ means the intent to, or possibility of, a malicious attempt to damage or disrupt computer equipment or networks, or exfiltrate electronic information at rest or in transit for nefarious purposes.

f) ‘Cyber-critical infrastructure’ means physical or virtual systems and assets vital to Wisconsin which, if incapacitated or destroyed, would have a debilitating impact on
Wisconsin’s safety, security, economy, public health, or any combination of those matters.

II. Assumptions

II.A. Vulnerability and Risk

II.A.1. The cause of a cyber-related threat or incident may be natural, technological, or human-caused or evolve from an ongoing physical-world incident.

II.A.2. Cyber-assets in both the public and private sectors in Wisconsin are vulnerable to a range of threats - from hardware and software failures, to attacks by criminals, terrorists or nation state actors as an act of war. For a better understanding of vulnerability and its relationship to the range of cyber threats and potential impacts in Wisconsin, refer to the discussion on the Cyber Incident Severity Schema (Section III.D.) and Table 1.

II.A.3. Cyber disruptions may be a single element of a larger incident. Activities conducted pursuant to this annex work within state and local planning and incident command structures, complement existing plans and procedures, and are compliant with the National Incident Management System (NIMS). Detailed tribal, state, and local operational and strategic plans will support this annex.

II.A.4. Each vulnerability imposes a degree of organizational risk. Managing these risks is the responsibility of government, non-government, and private sector organizations, all of which must understand the likelihood of an identified risk leading to an incident and the likely impacts of that incident. With that knowledge, organizations can establish their level of risk tolerance.

II.A.5. Tools in the effort to establish a secure cyber-environment include:

a) Equipment, including network protection, intrusion detection, and encryption technologies.

b) Planning, including developing and implementing a written and socialized comprehensive cyber-security approach. Plans should be reviewed and updated periodically to address new technologies and vulnerabilities.

c) Training, including programs that expand the whole community’s knowledge of cyber-threats and security measures.

II.A.6. Network risk tolerance, mitigation, and defense include:

a) At the executive level, IT system owners evaluate vulnerabilities within their systems; determine the level of risk each imposes, and the organization’s level of risk tolerance.

b) Information technology managers evaluate and assign financial and other available resources to mitigate and protect against system risks in accordance with the organization’s established risk tolerance.

c) Operations level personnel implement mitigation and protective actions to defend the network against intrusion and disruption.
II.B. Authorities

II.B.1. Lead agency in a cyber-incident: In accordance with Section §323.12(3) of the Wisconsin Statutes, WEM serves as the lead coordinating agency during a state of emergency declared by the Governor. However, in a cyber or telecommunications-related incident, the Governor may designate DOA/DET as the lead agency in accordance with §323.10 of the Wisconsin Statutes.

II.B.2. In accordance with 2013 Executive Order #101, the Governor’s Homeland Security Council advises the Governor and coordinates the efforts of state and local officials with regard to prevention of, and response to, potential threats to the homeland security of Wisconsin. As Chair of the Governor’s Homeland Security Council, The Adjutant General (TAG) serves as lead advisor for cybersecurity matters throughout the state of Wisconsin.

II.C. Policies

II.C.1. Incident Command System (ICS): Section §323.13(1)(c) of the Wisconsin Statutes requires that ICS be implemented to manage emergency incidents. Therefore, the Incident Command System shall be instituted for the management of any cyber related incident.

II.C.2. Public (and private sectors) should incorporate cyber into all aspects of emergency management and continuity of operations (COOP) and continuity of government (COG) plans.

II.C.3. The ReadyWisconsin website will serve as the state’s public-facing outlet, providing information on cyber security and threats to that security.

II.C.4. State network administrators are responsible for ensuring the cyber-hygiene in the wisconsin.gov domains. Cyber-hygiene involves five key processes:

a) **Count:** Knowledge of the cyber-environment. Conduct an inventory of network-connected hardware and software to better assess vulnerabilities.

b) **Configure:** Secure the cyber-environment. Assure all network-connected computers have common security settings that protect the state’s cyber-domains.

c) **Control:** Manage administrative privileges. Limit authority to add software, modify configurations, and add devices to the state network.

d) **Patch:** Protect the cyber-environment. Provide routine and verifiable security settings that are kept current.

e) **Repeat:** Monitor the cyber-environment and assure policies and procedures are enforced.

II.C.5. Consistent with the National Response Framework, a response to a cyber-threat or incident should be scalable, flexible, and adaptable. In general, each threat or incident should be addressed at the lowest jurisdictional level possible consistent with an effective response. However, unlike most incidents, the cyber-incident may originate at the federal level, or may simultaneously occur at multiple levels of government. This requires additional flexibility to the initial response to the incident.
II.C.6. State agencies (as well as private sectors) should collaborate and share existing cyber-capability for potential use in a declared state of emergency by the Governor.

III. Concept of Operations

III.A. Cyber Watch and Warning Organizations

III.A.1. Due to the pervasive nature of a cyber threat, initial identification of the threat may be through a variety of channels. Therefore, the state maintains four primary watch and warning centers that will monitor and share information in the event of a cyber-threat or attack. If any one of the four watch and warning centers receive notification of a cyber-incident or threat, that center is responsible for notifying each of the other centers, depending of the severity of the event and the sensitivity of the information. Sensitive or classified information will be shared with the Adjutant General and other agency senior leadership as appropriate.

III.A.2. WEM Duty Officer (DO): WEM maintains a 24-hour DO system to receive reports from individuals, state agencies, local units of government, tribal, and the private sector through a public facing toll-free telephone number (800-943-0003, selection 2). When notified of a cyber-threat or attack, the WEM DO notifies the WEM administrator through the senior duty officer (SDO).

   (1) At the state level, WEM operates the State Emergency Operations Center (SEOC) and coordinates state agency incident response.

b) Wisconsin National Guard Joint Operation Center (WI-JOC): The WI-JOC serves as the focal point for Wisconsin National Guard (WING) domestic operations by maintaining situational awareness via a common operational picture (COP), serving as a centralized communications and coordination node, and providing a command and control platform for contingency response operations. The WI-JOC is manned 24/7, 365 days a year.

   (1) The WI-JOC gathers and shares information through Situational Reports to WING, WEM, and Public/Private Partners to ensure their situational awareness and facilitate effective decision making.

c) Wisconsin Department of Justice (WI DOJ)/Wisconsin Statewide Intelligence Center (WSIC): As Wisconsin’s primary fusion center, WSIC works in partnership with the US Department of Homeland Security (US DHS) and the Federal Bureau of Investigation (FBI), as well as partners from other federal, state, local, tribal agencies, and the private sector to gather information and produce intelligence products for federal, state, local, tribal government agencies, the private sector, and the public. The WSIC is available at 608.242.5393 and swic@doj.state.wi.us.

   (1) In response to the emerging threats from cyber intrusions and associated disruptions, the WSIC has taken on roles and responsibilities in gathering, receiving, analyzing, and disseminating cyber threat information. The WSIC gathers cyber threat information through partnerships with the private sector as well as state, tribal, and local agencies.

   (2) The WSIC Threat Liaison Officer (TLO) and Fusion Center Liaison Officer (FLO) programs are statewide initiatives to work with federal, state, tribal, local agencies, and the private sector to provide training and serve as a mechanism for
the TLOs and FLOs to submit suspicious activity reports (SARs) to WSIC in order to detect, prevent, and respond to both criminal and terrorism-related activities.

(3) WSIC disseminates cyber threat information through its robust distribution network. Intelligence is disseminated both for situational awareness and for specific threats to CIKR. Through the implementation of the governance authority of this strategy, WSIC will utilize the subject matter experts or “authorized agents” identified for each of the CIKR sectors to disseminate cyber threat intelligence.

d) Department of Administration, Division of Enterprise Technology - Enterprise Service Desk (DET ESD): The DET ESD monitors the state cyber-domain on a 24-hour basis for threats or disruptions using a variety of automated systems. DET ESD notifies the state chief information security officer of any detected or suspected threat or attack against state information technology assets. DET ESD is available at 608-264-9383 and at esdhelp@wisconsin.gov.

III.B. Wisconsin Cyber-incident Annex Triggers

III.B.1. Cyber-related mitigation and preparedness activities are ongoing functions that routinely occur as part of the steady-state operations.

III.B.2. In the event of a credible threat or detection of an attack, the Adjutant General, the WEM administrator, or the DET administrator activate the incident response activities as outlined in the following section “III.E. Management and Operations.”

III.B.3. Conditions which may trigger the incident response functions of this annex include:

a) An incident involving activation of state level continuity of operations (COOP), continuity of government (COG) plans.

b) A threat or incident involving state-level, cyber-critical infrastructure.

c) When requested by:

(1) A local or tribal unit of government.

(2) DOA/DET management.

(3) DMA/WEM management.

d) When directed by:

(1) The DET Administrator up to cybersecurity threat level 2.

(2) The Adjutant General at cybersecurity threat level 3 or above.

III.C. Organization

III.C.1. Agency and entity roles and responsibilities in a cyber-incident:

a) End Use (Client): Individual system owners are responsible for training their subordinates in proper and appropriate uses of equipment, software, and networks. In a cyber-attack, system owners bear ultimate responsibility for equipment and network disruption and loss or exfiltration of data involving their computers, servers, and networks.

b) Service Provider: Internet service providers and other vendors of computer and network services are responsible for securing the domains and services they host or provide.
c) Manufacturer: Companies that design and build computers, servers, and other hardware are responsible for producing equipment that is free of vulnerabilities at the time of design and manufacture.

d) Local agencies:

(1) Law enforcement: Police departments and sheriffs’ departments, along with WI DOJ agents and possibly federal law enforcement agencies, investigate cybercrime and refer perpetrators for prosecution. These agencies also pass on information on the mechanisms used to disrupt or infiltrate victim networks to assist owners with securing their systems.

e) State agencies:

(1) DMA/WEM: At the state level, WEM operates the SEOC and coordinates state agency incident response. During a state of emergency declared by the Governor involving a cyber-incident, WEM is the lead agency unless the Governor appoints DOA/DET as the lead agency under Wisconsin Statutes §323.10.

(2) DOA/DET: During a state of emergency declared by the Governor involving a cyber-incident, the Governor may designate DOA as the lead state agency.

(3) WI DOJ/WSIC: The Wisconsin Statewide Intelligence Center (WI DOJ/WSIC) coordinates information sharing between DET and WEM, state, local, tribal law enforcement agencies, and other units of government. WSIC also coordinates information sharing with affected private sector entities, the US Intelligence Community including US DHS and its subordinate units, and with federal law enforcement.

(4) DMA/WING: The Wisconsin National Guard has a Cyber Response Team that may be deployable upon supportable mission analysis under applicable laws and regulatory parameters.

f) Federal agencies:

(1) US DHS: The Department of Homeland Security is the principal federal agency for domestic incident management. Through the National Cybersecurity and Communications Integration Center (NCCIC), US DHS coordinates cyber response to national level significant cyber-incidents and coordinates and integrates information sharing between federal, state, tribal, local governments and the private sector.

(2) US DOJ/FBI: The DOJ, through the FBI & National Investigative Joint Task Force (JCIJTF) serves as the lead federal agency for threat response activities during significant cyber incidents IAW PPD-41.

(3) DOD: The Department of Defense is the lead federal agency for responding to acts of war. Figure 2: Cyber-incident Roles and Responsibilities illustrates agency roles and responsibilities across a range of cyber-incidents.

III.C.2. Table 4 provides guidance for the Cyber Security Management Team on making recommendations to the Governor on making primary and coordinating agency decisions in different cyber-incident types.

III.D. Cyber Incident Severity Schema

III.D.1. Per Presidential Policy Directive 41 (PPD-41), the US Federal Cybersecurity Centers, in coordination with departments and agencies with a cybersecurity or cyber operations
mission, adopted a common schema for describing the severity of cyber-incidents affecting the homeland, US capabilities, or US interests. The schema (see Table 2) establishes a common framework to evaluate and assess cyber-incidents to ensure that all departments and agencies have a common view of the:

a) Severity of a given incident
b) Urgency required for responding to a given incident
c) Seniority level necessary for coordinating response efforts
d) Level of investment required of response efforts

III.D.2. State threat level considerations:

a) Whenever the federal government increases or decreases the cyber security threat level for the nation, it is expected that Wisconsin will align its response posture to match the federal government.

b) However, Wisconsin will also conduct its own assessment of the cybersecurity threat posed within the state, and may increase the state’s cybersecurity threat level independent of the federal government’s assessment.

c) Elevation of the cyber security threat level up to level 2 is at the direction of the DET administrator.

d) Elevation of the cyber security threat level above level 2 is at the direction of the Adjutant General.

e) De-escalation criterion: Once the threat has been neutralized or contained, de-escalation can occur. De-escalation from a cyber security threat level is conducted at the discretion of the elevation authority for that level.

III.E. Management and Operations – Cyber-incident Coordination

III.E.1. Senior Policy Advisors Group - When a significant cyber event occurs which affects state, local, and tribal (SLT) systems or critical infrastructure, or both, in Wisconsin and the Governor has not designated DOA/DET as the lead agency, the response effort will be led by TAG as Chair of the Senior Policy Advisors Group.

a) The Senior Policy Advisors Group consists of select members of the Wisconsin Cyber Management Team, DOA, and DMA legal personnel. Senior Policy Advisor Group members are senior level executives that manage and coordinate both a unified command group for cyber disruption response and the SEOC manager for coordinating the response for physical effects of a significant cyber event.

b) The Senior Policy Advisor Group communicates with the Governor’s office and the Wisconsin Homeland Security Council. As necessary, TAG may delegate coordination of briefings to the Wisconsin Homeland Security Council to the administrators of WEM and DET. Other Cybersecurity Management Team members may participate in these briefings.

c) TAG is the Governors’ senior state official for cyber matters and coordinates cyber response efforts with DHS and other federal agencies when required. TAG is the state’s primary point-of-contact (POC) for the NCICC. The DET Administrator is the state’s alternate POC for the NCICC. Additional POCs have also been identified to ensure continuous contact with the NCICC.

**Key:**
- R = Responsible
- A = Assist
- P = Primary
- S = Supporting
- C = Coordinate

**System Fault:** Hardware or software failure resulting in degraded system performance or interruption. Hardware power supply failures and software bugs.

**Accident:** An incident occurring suddenly or by chance disrupting the system or network. Data cable cuts and spills onto energized components.

**Disaster:** Natural or manmade incident overwhelming recovery resources.

**Computer Crimes:** The use of a computer to take or alter data, or to gain unlawful use of computers or services; the intent of which is usually to steal a person's identity, sell contraband, stalk victims or disrupt operations (both public and private) with malevolent programs.

**Cyber-Terrorism:** Acts of human malice intended to destroy, disrupt, or spread disinformation to intimidate governments or societies. Disrupting supervisory control and data acquisition (SCADA) systems. Hacking computer networks.

**Act of War:** A cyber-attack in the course of or as a prelude to armed conflict. Large scale disruption of government systems and networks. Disrupting military weapons systems.

**Notes:**
1. Network and computer owners and users
2. Entities providing information technology interconnection and internet service
3. Hardware and software manufacturers
4. WEM is the lead state agency unless Governor appoints DET under Wisconsin Statutes 5.323.10
5. FBI and US SS share jurisdiction for most cyber crime
6. WI DOJ has primary responsibility for investigation, with other law enforcement agencies, and apprehension

III.E.2. Cybersecurity Management Team - A key component of the Senior Policy Advisors Group is the Cybersecurity Management Team. Depending on the characteristics of the cyber event, the team may consist of personnel from DET, WSIC, WEM, WING, federal agencies, and owners of impacted systems. The team makes recommendations to the Senior Policy Advisors Group with regard to decision support involving primary and coordinating agency decisions in significant cyber-incidents.

III.E.3. Wisconsin Cyber Strategy and Planning Working Group – This working group is comprised of subject matter experts from the public and private sector responsible for advising on preparation, response to, and recovery from large-scale or long-duration cyber disruptions impacting Wisconsin’s critical infrastructure or other major assets. This working group conducts routine, monthly sessions. They are responsible for continuing broad analysis of existing cyber response plans, risk assessments, and knowledge sharing between and among members. During a disruption, members of this group may be mobilized by the Cybersecurity Management Team to act in an advisory capacity and analyze the immediate and long term impacts of the disruption on critical infrastructure in Wisconsin. Members of this group may also be tasked to prescribe an order of recovery for affected sectors and systems. Following the de-escalation of an event to Level 0, this group receives an email summary of the event. This information is fed into follow-on risk assessments.

III.E.4. Cyber Response Teams - The State of Wisconsin has facilitated the establishment of five (5) Cyber Response Teams. The State of Wisconsin Chief Information Security Officer (CISO), as Executive Agent for the SLT Cyber Management Teams, is responsible for training, certification, proficiency standards, and validation criteria. The CISO incorporates FEMA standards for team membership and works cooperatively with DMA/WEM for training and credentialing of teams and individuals respectively.

a) Three of the teams are regionally located, comprised of cyber experts from the SLT governments and managed by the DET.

b) The fourth team comes from the Wisconsin National Guard, which trains and certifies a Defensive Cyberspace Operations-Element (DCO-E). This team is comprised of approximately 10 Guardsmen in varying assignments. The primary focus is to protect and defend federal National Guard networks and respond in support of a state requirement.

(1) Wisconsin National Guard also fields three seven person teams as members of the Wisconsin-Illinois National Guard Cyber Protection Teams (CPT). The CPT is organized into five teams, with different roles and skillsets, as well as a command team. The teams will provide support to civil authorities in accordance with the existing Defense Support of Civil Authorities (DSCA) policy and practice.

c) The fifth team, also managed by the DET, is comprised of cyber experts from CIKR public and private organizations.

III.E.5. Table 3 outlines the US Department of Homeland Security CIKR sectors with State of Wisconsin government agencies. These agencies, along with private sector partners, form the Wisconsin Cyber Strategy and Planning Working Group. They focus a majority of their efforts in pre-disruption planning. The CIKR Sectors highlighted in bold are referred to as the Lifeline Sectors. These sectors will help to: 1) establish decision points mapped to the lifecycle of an event; and 2) determine the threat level, action plan, and resource allocation from a large-scale or long-duration cyber disruption that impacts the state.

*Note: Sectors in **Bold** are key sectors in a cyber incident and include the lifeline sectors.*

III.E.6. Whole Community Information Sharing - Cyber-related incident operations require a coordinated, multi-disciplinary management approach. In a cyber-incident, the cyber-incident management functions and the SEOC supporting local and tribal governments receive guidance and advice from the Senior Policy Advisors group.

a) The WSIC, as the state intelligence coordinating and analysis center, shares incident information with affected state level agencies and with US DHS and federal law enforcement. WSIC acts as the clearinghouse and analysis center for cyber-intelligence products in Wisconsin, with input from DOA/DET, private sector cyber-intelligence and defense assets, law enforcement, and other intelligence sources including the public.

b) DOA and WEM public information officers form a Joint Information Center (JIC) in accordance with ESF-15 Attachment 1 for sharing incident-related information with the public. The Lead PIO function will be fulfilled by the lead agency in the incident.

c) Since a cyber-incident is likely to cause significant effects to physical assets, the organizational structure may include resources involved in response to and recovery from those effects. Wisconsin Statutes Chapter 323 tasks local units of government with the responsibility to respond to incidents in their jurisdictions. The SEOC will elevate at cybersecurity threat level 3 or above to coordinate state agency support to local and tribal government in accordance with ESF-5 ‘Emergency Management’ as needed and requested. The SEOC, represented on the lower right side of Figure 1, operates under the direction of the SEOC Manager. Communication lines will be established between local and tribal units of government and the SEOC in order to maintain proper situational awareness.

d) Web EOC: Web EOC, a secure online emergency management situational awareness tool, should be used to:
(1) Gather situational awareness, develop a common operating picture, and distribute actionable information relating to, a cyber-threat or cyber-attack to all stakeholders.

(2) Document, and rapidly share incident-related information among stakeholders.
   
   (a) Key state agency contacts should complete Web EOC Basic and SEOC 101 training classes.
   
   (b) WEM will work with both public and private sector partners to ensure key personnel & liaisons have completed the appropriate SEOC and Web EOC training.

   e) Other information sharing tools may be utilized when appropriate based upon the sensitivity of the information being shared or the security needs of the incident.

### Figure 1: Cyber-Incident Structure

**Cyber Incident Structure**

III.E.7. **Federal Response** – Various federal government entities possess different roles, responsibilities, authorities, and capabilities (Figure 2) that can be brought to bear on cyber-incidents. These entities must coordinate efforts to achieve optimal results.

   a) The first federal agency to become aware of a cyber-incident will rapidly notify other relevant federal agencies to facilitate a unified federal response and ensure that the appropriate combination of agencies responds to a particular incident. When
responding to a cyber-incident in the private sector, unity of effort synchronizes the overall federal response, which prevents gaps in service and duplicative efforts.

b) SLT governments also have responsibilities, authorities, capabilities, and resources that can be used to respond to a cyber-incident; therefore, the federal government must be prepared to partner with SLT governments in its cyber-incident response efforts.

c) The transnational nature of the internet and communications infrastructure requires the US to coordinate with international partners, as appropriate, in managing cyber-incidents.

Figure 2: Coordination of Cyber-incident Management at Federal Level

III.E.8. Table 4 (on the following pages) shows the Cybersecurity Threat Levels and the involvement of supporting agencies at each level.

</thead>
</table>
| Cybersecurity Threat Level 0 – Baseline (White) | • Normal or baseline IT level with no major cyber-incidents forecasted in the near term.  
• Normal communication procedures follow established protocols on existing systems. | Cybersecurity Management Team (CMT) |
| | • Conduct routine, monthly sessions.  
• Continue broad analysis of existing cyber response plans, risk assessments, and knowledge sharing between and among members. | Wisconsin Cyber Strategy and Planning Working Group |
| | • Provide direction and priorities to the State of Wisconsin IT enterprise; may select special focus on specific malicious threats or request the Wisconsin Cyber Strategy and Planning Working Group convene to discuss particular impacts of the emerging threats.  
• Continue to provide direction and priorities to the State of Wisconsin IT security enterprise and agency CISOs  
• Notify WEM of significant identified vulnerabilities. | DET/Chief Information Security Officer(CISO) |
| | • All or portion of a team may mobilize to conduct training and advise or assist in assessing an agency’s security program. | Wisconsin Cyber Response Teams |
| | • Duty officer (DO) routinely monitors emails and calls.  
• DO reports any cyber-incident activity to WSIC, WI-JOC, DET and other appropriate agencies, per established Standard Operating Procedures (SOP). | WEM |
| | • Continue broad surveillance of cyber threat spectrum and receive updates or information from deployed WI Cyber Response Team assets.  
• Explore significant or potential indicators of compromise that may indicate a broadening of the threat and provide analysis of potential future targets.  
• Notify WEM of any potential for level increase. | WSIC |
| | • Receive initial notification from WEM DO. Monitor deployment of WI Cyber Response Team assets in state  
• Track for potential future inclusion in DHS Cyber COP  
• Provide regular and recurring updates with regard to homeland security-related events as a matter of routine.  
• Notify WEM of significant identified vulnerabilities. | WI-JOC |
**Cybersecurity Threat Level 0 – Baseline (White)**

**Definition:** Standard IT defensive measures are in place and active measures such as scanning, patching, and hygiene activities are conducted as a matter of standard operations. Regular or low levels of scanning, probes, etc. activity are occurring. Warnings, alerts, and indicators received and processed as a matter of routine. The Wisconsin Cyber Strategy and Planning Working Group continues with its work with recurring meetings and workgroups.

**Resulting affects:** No risks are expected. No special events mandating the rise to a higher level.

**Communications Procedures:** All communications procedures follow established protocols on existing systems. No special measure are enacted or followed.

</tbody>
</table>
Cybersecurity Threat Level 1 – Low (Green)

**Definition:** A substantiated event/malicious activity with minor impact that is occurring or has occurred. The event is unlikely to impact public health or safety, or economic security civil liberties. Affected entities are capable of managing the event with possible consulting/advising by supporting agencies and that agency is capable of remediation. Limited contact with Liaison Officers or deployment of response assets to networks or systems suspected of having been successfully targeted or exploited may occur.

**Resulting Effects:**
- Minor changes to normal activity occurred or are occurring – vulnerability is being exploited with limited affect.
- Credible warnings, alerts, and indicators received.
- Malware compromised a non-critical system, but no further action occurred.
- A limited scope/duration denial of service attack occurred with minor impact.

**Communication Procedures:** An affected entity notifies the WEM DO. Regardless if WEM, WI-JOC, DET or WSIC receives the initial incident notification, the receiving party notifies the remaining three stakeholders. All other communications procedures follow established protocols on existing systems.

Table 7: Cybersecurity Threat Level 2 and Corresponding Command and Control Actions

**Cybersecurity Threat Level 2 – Medium (Yellow)**

**Definition:** Event may impact public health or safety, economic security, and civil liberties. Agencies have identified malicious activity with a minimal level of damage to information systems or disruption across one or more agencies. One to three days are required for recovery actions and systems may need to be taken off line for this period.

**Resulting Effects:**
- Exploit conducted with moderate level of success.
- Compromise of secure system(s).
- Data spillage/Doxing.
- Attackers gained administrative privileges or evidence suggests they have done so.
- A virus or worm is spreading quickly through public and/or private networks.
- Distributed Denial of Service (DDOS) attack with long lasting effects.

**Communications Procedures:** Communications serve to facilitate the creation of a common understanding of the event and its ramifications. WEM, DOA-DET, WI DOJ/WSIC and the WI-JOC continue to contribute to this understanding via a possible Web EOC incident site. Conference calls and email remain the primary communications tools. RAVE alerts are used to convene the Cyber Management Teams and key members of the Wisconsin Cyber Strategy & Planning Working Group. An operational rhythm of regular calls or briefings is established to maintain situational awareness during the course of the incident.

• Ensure agency CISOs successfully complete remediation activities.  
• Begin to assess potential impacts to State of Wisconsin IT enterprise and work to mitigate the process or systems affected by the event.  
• May direct the deployment of a WI Cyber Response Team to the affected entity.  
• Notifies MS-ISAC of the event.  
• Updates US NCCIC status map. | DET/Chief Information Security Officer(CISO) |
| | • Teams are alerted and may activate to conduct initial liaison to investigate a threat in a government or private sector entity.  
• Teams or LNO pass back any forensic evidence to other teams and WI DOJ/WSIC forensics.  
• Notify WI DOJ/WSIC of any suspected criminal activity. | Wisconsin Cyber Response Teams |
| | • May direct the deployment of a WI Cyber Response Team to the affected entity.  
• May convene the Senior Policy Advisors Group. | The Adjutant General (TAG) |
Cybersecurity Threat Level 2 – Medium (Yellow)

**Definition:** Event may impact public health or safety, economic security, and civil liberties. Agencies have identified malicious activity with a minimal level of damage to information systems or disruption across one or more agencies. One to three days are required for recovery actions and systems may need to be taken off line for this period.

**Resulting Effects:**
- Exploit conducted with moderate level of success.
- Compromise of secure system(s).
- Data spillage/Doxing.
- Attackers gained administrative privileges or evidence suggests they have done so.
- A virus or worm is spreading quickly through public and/or private networks.
- Distributed Denial of Service (DDOS) attack with long lasting effects.

**Communications Procedures:** Communications serve to facilitate the creation of a common understanding of the event and its ramifications. WEM, DOA-DET, WI DOJ/WSIC and the WI-JOC continue to contribute to this understanding via a possible Web EOC incident site. Conference calls and email remain the primary communications tools. RAVE alerts are used to convene the Cyber Management Teams and key members of the Wisconsin Cyber Strategy & Planning Working Group. An operational rhythm of regular calls or briefings is established to maintain situational awareness during the course of the incident.

### Table 8: Cybersecurity Threat Level 3 and Corresponding Command and Control Actions

#### Cybersecurity Threat Level 3 – High (Orange)

**Definition:** Likely to result in demonstrable impact to public health and safety, economic security or civil liberties of WI citizens and business. Malicious activity is identified with a moderate level of damage or disruption. Physical effects of disruption to critical infrastructure or lifeline sectors. Escalation to Level 3 is likely if cyber-incident effects manifest in physical effects with any CIKR sector.

**Resulting Effects:**
- Malicious activity results in widespread outages or complete network failures.
- Data exposure with severe or highly sensitive impact.
- Significantly destructive compromises to systems or disruptive activity with no known remedy.
- Mission critical application failures with imminent impact on the health, safety or economic security of the state.
- Compromise or loss of administrative controls of critical system(s).
- Loss of critical supervisory control and data acquisition (SCADA) systems.

**Communications Procedures:** Incident participants use Web EOC as a means of maintaining situational awareness.

IIIF. Mitigation and Protection Strategies

IIIF.1. Steady-state activities: The wide variety of cyber-threats and the risks associated with them dictate unique mitigation strategies which are conducted on a day-to-day basis. Most cyber disruption planning occurs in routine and conventional face to face meetings and planning sessions held between the various stakeholders.

IIIF.2. The following scalable and flexible strategies accommodate different threats across the whole community of cyber-users. Strategies to mitigate and protect against cyber-threats include:

a) Ongoing public information campaigns by WEM and DET relating to cyber-safety for the public.

b) Ongoing employee training by computer and network owners on their IT policies, procedures, and established best practices to avoid network and proprietary data compromise.

c) Ongoing network and internet monitoring and intelligence gathering by:
   (1) DOA/DET staff routine monitoring of state networks.
   (2) WI DOJ/WSIC monitoring of intelligence sources.
   (3) City of Milwaukee Southeastern Wisconsin Threat Analysis Center monitoring of southeast Wisconsin intelligence sources.

d) Cyber disruption planners must identify and refine the list of critical information systems facilities (key network nodes/switching centers, data centers and related sites) vital to any restoration effort or if required, physical protection. These sites may require augmentation by mobile or deployable communications and additional physical protection. They in turn may be priority assets for the restoration of vital lifeline services. Owners must understand the limits of on-hand backup/emergency fuel supplies and other dependent materials to sustain these key nodes.

e) Contact lists for all CIKR owners and operators must be updated, shared, and maintained. WEM and DET are the custodians of this list, which should be updated no less than bi-annually.

f) Explore the means to build or expand out-of-band systems (i.e., those without dependencies on the grid and commercial switching facilities) in order to influence communications and coordination between critical facilities and operations centers.

g) Communications systems in all categories (routine daily systems, out-of-band networks, and emergency radio networks, etc.) should be tested bi-annually in an inclusive communication testing event or as a stand-alone event. WEM is responsible for planning and coordinating the test(s) and sharing results and recommendations among the cyber disruption planners.

h) Protective actions by individual computer users and network owners:
   (1) Use good computer hygiene to avoid exposing computers, data, and network resources to unauthorized persons and organizations.
   (2) Keep computer and network hardware and operating systems up to date.
   (3) Keep software licenses current as well as software patches and updates installed.
(4) Regular information sharing with appropriate authorities.

i) Intelligence gathering and analysis: State agencies share information on cyber-related threats with the Multi-State Information Sharing and Analysis Center (MS-ISAC).

III.F.3. Common cyber-threats include:

a) Threats to individuals such as phishing and spear phishing.

b) Threats against information networks (e.g., hacking, network disruption, and exfiltration of sensitive information).

c) Threats against infrastructure (e.g., supervisory control and data acquisition (SCADA) systems, and utility system controls).

III.G. Communications

III.G.1. Prompt notification of key personnel in a cyber-threat or incident is critical. Each agency with a role in a cyber-incident response shall identify key personnel and a means to rapidly alert them.

III.G.2. A cyber-incident may rapidly spread across public and private sector networks spanning geographic and political jurisdictional boundaries. Significant cyber-incidents may quickly require state or national coordinated response actions.

III.G.3. Decision-makers in a cyber-incident must have reliable and readily available communications resources in order to coordinate a cyber-incident response. ESF-2 addresses emergency communications and a list of communications resources is maintained by DMA/WEM.

III.G.4. Backup Communications: Many communications modes are dependent on the cyberspace environment and may be subject to disruption in a cyber-incident. The WEM Communications Office can provide information on alternative communication resources.

a) In the event of degraded communications, intermittent or untrustworthy communications, severe communications disruption or lack of contingency communications, the SEOC functions as the primary operations center for directing physical recovery efforts and hosting the Senior Policy Advisory Group and the Cyber Security Management Team. The alternate site for the EOC is Camp Williams/Volk Field, Wisconsin. Williams/Volk is designated for exceptional circumstances wherein the state or nation is under widespread emergency conditions and the Madison metro area must be evacuated.

b) When required or as mandated by an authorized agent or body, WISCOM may serve as the primary out-of-band communications between affected cyber nodes, key cyber facilities and command post locations. The talk group would be determined at the time of the incident. The SEOC serves as the net control station. Repositioning of mobile or deployable communications may be initiated in order to provide needed emergency communications for response actions.

III.G.5. Key Information Systems: Regardless of the level of disruption, gaining and maintaining situational awareness, especially for our most senior state leaders is vitally important. Additional key information systems or platforms which may greatly assist coordination and response include:
a) WEM’s Emergency Management Software System. Regardless of the event escalation and its resulting effects, WI maintains awareness through WEM’s emergency management portal.

b) The Department of Homeland Security’s National Cybersecurity and Communications Integration Center (NCCIC) uses an integrated system-of-systems that delivers a range of capabilities, including intrusion detection, analytics, intrusion prevention, and information sharing. This system, Communications and Cyber Common Operating Picture (DHS CCOP) (UNCLASS and CLASSIFIED), is a new and maturing capability. For the state, the JOC has primary responsibility to monitor the CCOP and use its data to inform leadership and the Senior Policy Advisors Group of developing cyber-incidents. The JOC is the primary contributor for the state with events WI will submit to the CCOP, upon leadership clearance.

(1) Events submitted to the CCOP face a further review at the national level. While all reported events are tracked, all may not be reflected back onto the CCOP (this is at the discretion of the DIR NCCIC). Events are added to the DHS CCOP at all levels of disruption, however, in the first two levels, the affected entity determines whether or not the event is posted to the CCOP. When events in WI reach levels 3-5, event listing is mandatory.

III.G.6. Public Answering Centers: Answering centers (9-1-1 Call Centers), in addition to social media, often facilitate the first reports of physical effects of cyber disruptions on our citizens and businesses. Adversaries and activists may wish to multiply the effects of their actions through denial of services or other disruptions of these nodes. It is therefore vital that Wisconsin protects and ensures the efficient operation of its public call centers.

   a) Each call center is responsible to develop and maintain its own policies on reporting cyber-incidents. These policies should, however, include notification to the Cyber Watch and Warning Organizations listed in Section III.A.

III.H. Other Agency Plans and Documents

I. Introduction

I.A. Purpose

I.A.1. Wisconsin is subject to droughts, which can cause severe, even catastrophic, damage. A prolonged or extreme drought can impact:

a) Wisconsin’s economy by reducing industrial, commercial, and agricultural productivity.

b) Quality of life by the direct effects of reduction of available water resources and by the indirect effects of loss of jobs, livestock, and crops.

I.A.2. This annex:

a) Provides perspective and guidance to state agencies in drought recognition, response, and mitigation.

b) Proposes state agency actions that can minimize environmental damage, economic losses, domestic hardships, and other drought related impacts on the state.

I.B. Scope

A drought can be described as a prolonged period of abnormally dry weather where diminished precipitation causes serious hydrologic imbalance. Drought severity depends on the degree and duration of precipitation deficiency and the size of the affected area. A drought is a progressive and potentially unrecognized incident until it has reached a moderate to severe level. This annex:

I.B.1. Identifies indices of drought conditions and classifies drought levels.
I.B.2. Defines trigger points for activating this annex based upon the level of drought conditions.
I.B.3. Provides guidance on actions that state agencies may take to mitigate the effects of a drought or respond to drought conditions.

I.C. Policies
I.C.1. Wisconsin state agencies should have procedures specifying appropriate actions when the U.S. Drought Monitor indicates a drought of Category D0 to D4. Drought categories are described in section IV.A. U.S. Drought Monitor Classification Scheme.
I.C.2. WEM should:
   a) Maintain situational awareness for potential or actual drought conditions and advise the adjutant general and Governor’s office.
   b) Maintain in WebEOC a list of available sources including, but not limited to: pumps, pipes, and other resources needed to help mediate the effects of drought.
   c) Conduct public information campaigns, based on information contained in this plan, to heighten public awareness of current or potential effects of drought and measures the public can take to mitigate the effects of a drought.
I.C.3. DOA should establish or maintain contracts with suppliers of pumps, pipes, and other hardware for rapid procurement and delivery should the need arise.

II. Water Conservation and Efficiency Benefits
II.A.1. Using water efficiently provides benefits for our water resources and for communities. Efficient water use helps maintain a stable and sustainable water supply, protect aquatic ecosystems, conserve energy resources, and save money under both drought and normal conditions.
   a) Water treatment plants
      Water efficiency reduces the amount of energy used to pump and chemicals needed to treat water supplies.
   b) Wastewater treatment
      Using less water reduces the burden on wastewater treatment plants and septic systems, and can help maintain the water quality of lakes, rivers, and groundwater.
   c) Water supply
      Water efficiency and conservation measures are often less expensive and easier to implement than developing a new groundwater well, pipeline, or lake water intake.
II.A.2. Information on water conservation and efficiency measures for individuals, water and wastewater utilities, and local governments is available from:
   a) The DNR at:
   b) The PSC at:
      https://psc.wi.gov/Pages/ForUtilities/Water/ConservationandEfficiencyInitiative.aspx.
III. Planning Assumptions

III.A.1. A drought can occur at any location and may be difficult to recognize in its early stages.

III.A.2. Short-term drought conditions typically last for six months or less. Long-term droughts persist for more than six months, possibly lasting for years.

III.A.4. State level response to a drought incident will be consistent with the National Incident Management System (NIMS) and the Wisconsin Emergency Response Plan (WERP).

III.A.5. The following graph depicts statewide average annual precipitation from 1895 to 2016. Green areas on the graph identify those years with above average precipitation and red areas identify those years with below average precipitation.

III.A.6. Drought conditions cause many adverse effects on the state including, but not limited to:

   a) Agriculture, agriculture-based business, recreation, and the tourist industry
   b) Upward pressure on retail food prices due to shortages of vegetables, dairy products, meat, and other foodstuffs
c) Increased possibility of rapidly spreading wildland fires due to reduced soil and vegetation moisture levels

d) Water shortages that may result in voluntary or mandatory limitations on water use

e) Reduced availability of drinking water

f) Reductions in river, lake, and stream levels and flows causing harm to water-dependent natural resources

IV. Concept of Operations

IV.A. U.S. Drought Monitor Classification Scheme

The U.S. Drought Monitor is produced through a partnership between the National Drought Mitigation Center at the University of Nebraska-Lincoln, the United States Department of Agriculture, and the National Oceanic and Atmospheric Administration. The U.S. Drought Monitor uses the following Drought Severity Classification.

IV.A.1. Category D0

a) Description

Abnormally Dry

b) Possible Impacts

(1) Going into a drought:

(a) Short-term dryness slowing planting, growth of crops or pastures

(2) Coming out of a drought:

(a) Some lingering water deficits

(b) Pastures or crops not fully recovered

IV.A.2. Category D1

a) Description

Moderate Drought

b) Possible Impacts

(1) Some damage to crops, pastures

(2) Streams, reservoirs, or wells low, some water shortages developing or imminent

(3) Voluntary water use restrictions requested

IV.A.3. Category D2

a) Description

Severe Drought

b) Possible Impacts

(1) Crop or pasture losses likely

(2) Water shortages common

(3) Water restrictions imposed
IV.A.4. Category D3
   a) Description
      Extreme Drought
   b) Possible Impacts
      (1) Major crop or pasture losses
      (2) Widespread water shortages or restrictions

IV.A.5. Category D4
   a) Description
      Exceptional Drought
   b) Possible Impacts
      (1) Exceptional and widespread crop or pasture losses
      (2) Shortages of water in reservoirs, streams, and wells creating water emergencies

Additional Drought Severity Classification information is included in Attachment 1.

IV.B. Mobilization Triggers

This non-inclusive list demonstrates some of the triggers for activating this annex:
   IV.B.1. The governor, individually or in consultation with the adjutant general and WEM administrator, determines that conditions in the state warrant activation.
   IV.B.2. WEM, in consultation with the Drought Taskforce, determines that a significant portion of the state is Category D0 (Abnormally Dry) or Category D1 (Moderate Drought) condition.
   IV.B.3. WEM, in consultation with the Drought Taskforce, determines that any portion of the state is in a Category D2 (Severe Drought) or Category D3 (Extreme Drought) condition.

IV.C. Drought Taskforce

IV.C.1. Activation
   Activation of the Drought Taskforce may occur in response to, or in anticipation of, drought conditions that may necessitate state support or assistance.

IV.C.2. Composition
   The taskforce is anticipated to include, but is not limited to, representatives from:
   a) The Governor’s Office
   b) WI DHS
   c) DNR
   d) DATCP
   e) WisDOT
   f) DMA
IV.C.3. Activities

a) Meets on a regular basis
b) Submits weekly reports to the governor for his/her situational awareness and action
c) Serves as the technical advisory body for state and local decision makers
d) Develops, with the advice of focus area subgroups, short- and long-term drought response recommendations for protection of the public
e) May provide, with the advice of focus area subgroups, specific information on:
   (1) Drought trends
   (2) Establishing water use priorities
   (3) Recommendations to local water utilities for creating or updating water shortage plans
   (4) Water availability including observed and expected precipitation, stream flow, reservoirs, and groundwater levels
   (5) Dry or impacted wells and other groundwater supply sources
   (6) Recommendations relating to proposed state actions
   (7) Potential impacts on Wisconsin’s agriculture, economy, and environment
   (8) Impacts to navigable waterways including Great Lakes ports and the Mississippi River
   (9) Improvements to the capability to provide accurate and timely assessments of water availability or agricultural deficiencies
   (10) Recommendations to the governor and other partners concerning state level responses

IV.C.4. Focus area subgroups

In addition to the Drought Taskforce, additional subgroups, when created, provide input on various focus areas including, but not limited to:

a) Agriculture
b) Wildfire
c) Fish and wildlife
d) Recreation and tourism
e) Public water supplies
f) Economic impacts

IV.D. Annex Activities

The WERP Basic Plan defines standardized tasks that constitute the prevention, protection, mitigation, response, and recovery responsibilities of any agency that serves a role in
emergency management. This section defines activities unique to this annex, intended for use in conjunction with the common tasks outlined in the Basic Plan.

IV.D.1. As drought conditions deepen, decisions on reducing water consumption may become necessary.

a) Numerous factors influence these decisions including location and other factors specific to the incident at hand.

b) The following prioritized, non-inclusive list of water uses is for guidance purposes only:

(1) Human health
(2) Firefighting
(3) Livestock watering
(4) Crop irrigation
(5) Industrial and commercial process uses
(6) Hydroelectric production
(7) Recreational uses (i.e., water parks, golf course irrigation)
(8) Quality of life use (landscape watering, car washing)

IV.D.2. Other measures to mitigate drought conditions may include adjustments to commercial, industrial, and municipal effluent discharged into lakes, rivers, and streams.

## I. Introduction

### I.A. Purpose

To establish the legal and organizational basis for state-managed mass care and recovery operations following catastrophic incidents affecting populations from outside of Wisconsin who evacuate to Wisconsin.

### I.B. Scope

In the event a disaster outside of Wisconsin prompts either a spontaneous evacuation of out-of-state residents to Wisconsin, or a direct request for Wisconsin to host evacuees from another state, this plan provides for state-managed mass care and recovery operations as directed by an executive order issued by the governor. This plan encompasses:

- **I.B.1.** A mass care organizational framework for direct management of reception and mass care operations by state agency personnel with support from local, county, and tribal agencies and voluntary organizations.

- **I.B.2.** Recovery – a rapid response system for providing a comprehensive range of recovery services for evacuees, with emphasis on quick transition to short- and long-term housing, whether they are located:
  - a) In shelter(s)
  - b) In the community near the shelter
c) In other locations around the state

I.C. Policies

I.C.1. Activation of the plan requires that the governor of the State of Wisconsin declare a state of emergency by executive order.

I.C.2. As set forth in the Wisconsin Emergency Response Plan, emergency support function (ESF) #6 may be designated to activate incident command for mass care and recovery lead operations, in which the State of Wisconsin hosts evacuated populations from other states. Incident command will coordinate with the state emergency operations center (SEOC).

I.C.3. WI DHS and the DCF share responsibilities for incident command. They may choose to operate under a unified command system with other key response partners.

I.C.4. The State of Wisconsin will authorize reimbursement of expenses incurred by local and tribal governments and host communities in support of state-managed mass care operations in accordance with §§ 323.30, 323.80, and 323.81 Wis.Stats., existing written agreements, and within federal and state public assistance program regulations.

I.C.5. This plan does not replace or supersede any local plans, nor does it usurp the authority of local, county, tribal governments, or voluntary organizations.

II. Planning Assumptions

II.A.1. All agencies and organizations named in this plan must develop additional supporting plans and procedures to fulfill their assigned missions, where necessary.

II.A.2. A surge of out-of-state evacuees into Wisconsin from a catastrophic incident may occur:
   a) Spontaneously
   b) Through a state-to-state Emergency Management Assistance Compact (EMAC) agreement
   c) Through the State and Province Emergency Assistance Compact
   d) Through a direct request from FEMA to the host state

II.A.3. Spontaneous evacuees may locate across the state, either individually or in clusters.

II.A.4. Spontaneous evacuees who locate a considerable distance from a primary recovery center will need recovery support provided in the communities to which they evacuated.

II.A.5. The SEOC will use a variety of communications strategies to relay to evacuees:
   a) The locations of community shelters
   b) What supplies evacuees should bring to increase comfort at community shelters
   c) What not to bring to shelters
   d) How to contend with special considerations (e.g. pets; adults and children with disabilities and others with access and functional needs; unaccompanied minors; probation, parolees, sex offenders; etc.)
II.A.6. To the degree possible, pre-screening of transportation-dependent evacuees will occur at local assembly areas when evacuees are boarding transit vehicles.

II.A.7. The SEOC will strongly advocate home state use of the National Mass Evacuation Tracking System (NMETS) to:

a) Identify and aggregate:
   (1) Family members
   (2) Their pets and service animals
   (3) Their possessions
b) Create transportation manifests
c) Track evacuees from site-to-site
d) Facilitate family reunification
e) Flag evacuees with medical or access and functional needs
f) Flag unaccompanied minors
g) Flag those on probation, parolees, or sex offenders

II.A.8. The American Red Cross is a primary community shelter provider. This plan will capitalize, to the greatest degree possible, on existing sheltering systems and capabilities.

II.A.9. Participating agencies will make every effort to eliminate duplicative evacuee registration requirements by sharing evacuee intake data.

III. Concept of Operations

This plan prescribes the core framework for state agency responsibilities in state-managed mass care and recovery operations. Other supplemental agency, interagency, local, county, tribal, and non-governmental plans provide additional operational details.

III.A. Mobilization Triggers

Mobilization of this plan requires that both of the following events occur:

III.A.1. Disaster survivors from another state evacuate to Wisconsin by means of:
   a) An EMAC agreement between Wisconsin and the home state
   b) The State and Province Emergency Assistance Compact
   c) A request from FEMA that Wisconsin host evacuees
   d) Spontaneous evacuation

III.A.2. The governor declares a state of emergency

III.B. Site Organization

The following chart suggests a concept of site organization for the shelters and recovery center that provides for (depending on level of disaster declaration):

III.B.1. Privacy for shelter residents
III.B.2. Proximity of the animal shelter and the recovery center to shelter residents

III.B.3. Recovery Center vs. MARC

a) In the event of a Presidential Declaration of a Major Disaster, a Disaster Recovery Center will be activated to facilitate dissemination of federal and other types of aid.

b) In the absence of a presidential declaration, a Multi-Agency Resource Center (MARC) will be activated to facilitate the dissemination of available aid.

III.B.4. A separate entrance to the recovery center for evacuees who are not residing in the shelter

III.B.5. The inclusion of remote recovery centers in the concept of operations

Figure 1: Concept Site Organization

III.C. Incident Management Teams

To the degree feasible, this plan will call on regional Wisconsin incident management teams (IMTs) to help staff key command and general staff incident command positions.

III.C.1. An incident management team is a comprehensive resource to either augment ongoing operations through provision of infrastructure support or, when requested, transition to an incident management function to include all components and functions of a command and general staff. An IMT:

a) Includes command and general staff members and support personnel

b) Has formal response requirements and responsibilities

c) Has pre-designated roles and responsibilities for members (identified and able to be contacted for deployment)

d) Is available 24/7/365

e) In lengthy operations, typically transitions to responsible agency personnel
III.D. Incident Command

The following charts suggest a functional organizational structure that should be flexible and scalable in accordance with the size of the operations. “Functional” means that a single person, unit, task force, or team might fulfill two or more functions, and the boxes do not necessarily represent separate positions or units.

Figure 2: Incident Command Chart

III.E. Functional Organization

III.F. SEOC Interface

The SEOC may elevate to Level 3 or higher in anticipation of and in support of activation of this plan, with the following ESFs providing operational support.
### Table 2: ESFs Operational Support

<table>
<thead>
<tr>
<th>State ESF</th>
<th>Support Role</th>
</tr>
</thead>
<tbody>
<tr>
<td>ESF 2</td>
<td>• Supports provision of communications capabilities at facilities</td>
</tr>
</tbody>
</table>
| ESF 5     | • Opens SEOC – activate relevant ESFs  
• Coordinates with Governor’s Office for declaration of a state of emergency  
• Coordinates with FEMA, EMAC, and evacuees’ home state relative to the conditions/parameters of the operation  
• Provides support in filling incident command general and command staff positions  
• Provides communications and resource support |
| ESF 6     | • Directs mass care and recovery operations  
• Coordinates voluntary organization support  
• Provides interface with ESF 14 for transition from short-term to long-term recovery |
| ESF 7     | • Activates Donations and Volunteer Management Plans as necessary  
• Provides support to on-site logistics section |
| ESF 8     | • Provides public health and medical support  
• Supports public health inspections of facilities  
• Coordinate healthcare volunteer support |
| ESF 11    | • Activates Animal Disaster Response Plan |
| ESF 13    | • Initiates all relevant recovery services, programs, and systems  
• Interfaces with ESF 6 to transition from short-term to long-term recovery  
• Serves as primary point of contact with FEMA recovery staff |
| ESF 14    | • Provides support to on-site public information  
  ○ Supports public information officer (PIO) staffing  
  ○ Provides web and social media support  
• Coordinates the mobilization of a joint information center (JIC), if necessary  
• Coordinates legislative/congressional communications relative to the operation  
• Supports rumor control |
| ESF 15    | • Supports provision of security at reception, shelter, and recovery facilities |

### IV. Functional Responsibilities

The term “functional responsibilities” indicates activities in contrast to personnel. Depending on the scale of operations, individual staff might perform multiple functions.

All agencies and organizations identified in the following charts must develop additional supporting plans and procedures as necessary to fulfill their assigned missions.

#### IV.A. Incident Commander

WI DHS and the DCF share responsibility for incident command. They may choose to operate under a unified command system with other key response partners.
IV.B. Command Staff

## Wisconsin Emergency Response Plan
### Wisconsin Mass Care & Recovery Plan
For State-to-State Evacuations

<table>
<thead>
<tr>
<th>Chart</th>
<th>Role</th>
<th>Agency</th>
</tr>
</thead>
</table>
| **Law Enforcement** | • Conducts background checks on all incoming evacuees to determine:  
  o Circumstances that affect sheltering options (e.g. registered sex offenders,  
    people with restraining orders)  
  o Which evacuees need to register with the WI DOC for probation or parole | Host county  
  Host tribe |
| **Medical Triage** | • Determines whether evacuees can safely continue in community shelters or need referral to skilled nursing facility (e.g. hospital, nursing home, behavioral health center)  
  • Determines immediate prescription and medical equipment as well as supply needs  
  • Refers evacuees to shelter health services unit or functional assessment service team (FAST) as appropriate | WI DHS (MRC)  
  ARC |
| **Shelter Assignment** | Assigns evacuees to appropriate shelter and records their destinations | ARC |
| **Shelter Services Branch Director** | | WI DHS/DCF |
| **Facility Set-Up and Maintenance** | • Prepares and equips the shelter, providing for designated areas for all shelter functions, including all furnishings, equipment, ADA accommodations, and signage  
  • Provides for cleaning and maintenance throughout shelter use | ARC |
| **Evacuee Check-In** | • Maintains an ongoing roster of names and locations of all shelter residents  
  • Makes immediate referral of unaccompanied minors to the County Department of Human, or Social Services, or the DMCPS Intake Workers where the child is currently at to determine if physical custody of the child should be taken for placement into out-of-home care. | ARC  
  DCF |
| **Functional Assessment Service Teams (FAST)** | Along with other partners, such as American Red Cross, facilitates the acquisition of essential resources for evacuees with access and functional needs | WI DHS |
| **Dormitory (Residence Area)** | Provides and manages accessible sleeping, toilet, and showering accommodations for shelter residents | ARC |
| **Feeding** | Provides three meals a day (including at least one hot meal per day) plus snacks for evacuees, that meet nutritional requirements for infants, children, as well as dietary and cultural restrictions | SA |
| **Bulk Distribution** | Provides essential supplies to shelter residents (e.g. toiletry kits, diapers, clothing) | American Red Cross  
  SA |
| **Recovery Center Branch Director** | | DMA/WEM |
| **Case Management** | In cooperation with the FAST, coordinates and tracks evacuee access to all recovery services and programs, including facilitating voluntary organizational support to fulfill evacuees’ unmet needs | WI DHS  
  WI VOAD |

| Department of Agriculture, Trade and Consumer Protection | • Coordinate the mobilization, operations, and demobilization of the household pet shelter.  
• Coordinate the placement of unclaimed pets.  
• Provide consumer protection services to the evacuees. |
| Department of Corrections | • Coordinate disposition of evacuees who are on probation, parole, or are sex offenders.  
• Provide resources for security operations  
• Provide transporation support for security operations |
| Department of Justice | • Provide support for security background checks for evacuees.  
• Provide support to law enforcement/security operations. |
| Department of Public Instruction | • Coordinate access to appropriate educational resources for school-age evacuees. |
| Department of Veterans Affairs | • Coordinate access for evacuated veterans to appropriate programs and benefits. |
| Department of Workforce Development | • Provide for evacuee access to information and contacts for the following programs:  
  o Worker’s compensation  
  o Unemployment insurance  
  o Anti-discrimination enforcement  
  o Vocational rehabilitation for people with disabilities  
  o Employment and training services  
• Administer the Disaster Unemployment Assistance (DUA) program through the Unemployment Insurance (UI) Division following a presidential disaster declaration that includes individual assistance. |
| Department of Military Affairs: Wisconsin Emergency Management | • Elevate and manage the SEOC in support of response and recovery operations.  
• Activate the Donations and Volunteer Management Plans, as necessary.  
• Coordinate and implement human service assistance programs available following a triggering disaster declaration.  
• Coordinate with federal, state, tribal, and local entities to identify and disseminate information on available, affordable housing, and housing programs. |
| Wisconsin Housing & Economic Development Authority | • Coordinate with the DOA and federal agencies to identify multifamily and elderly affordable housing  
• Administer home buying and home improvement programs, as appropriate for disaster survivors. |
| Department of Military Affairs: Wisconsin National Guard | Upon a state declaration of emergency and validated request from the state provide:  
• Support to evacuation, reception center, and mass care operations  
  o Planning and logistics support  
  o Use of WING facilities for reception  
  o Transportation support with buses or heavy trucks  
• Support to supply and commodity distribution  
• Limited power generation and communications support |
## V.C. Non-Governmental Support Organizations

### I. Introduction

The common vision of a typical “mass evacuation incident” is a coastal evacuation where hundreds of thousands of people, given early warning and using all available vehicles, form miles-long streams of traffic creeping inland on contraflow roads crossing multiple jurisdictions to avoid an impending storm’s devastating impact. Wisconsin, however, faces no such threat.

A “mass evacuation incident” in Wisconsin is more likely to occur with limited or no warning and be more localized in its impact. Since “mass evacuation” implies that sizeable populations are involved, incidents triggering mass evacuations will generally occur in Wisconsin’s largest population centers (see Figure 1) and will almost immediately overwhelm local resources requiring instantaneous mutual aid from surrounding communities, the private sector, Wisconsin state resources, surrounding states, or the federal government. These incidents could also affect multiple jurisdictions necessitating large-scale evacuation and shelter operations particularly in high population density areas of Southeast Wisconsin, the Fox Valley, or Dane County.

Additionally, areas of Wisconsin in close proximity to large population centers in neighboring states (Chicago and Minneapolis/St. Paul metropolitan areas) should have plans in place and have conducted requisite prior coordination to effectively address the needs of a large population influx from those out-of-state areas.

Since evacuations in Wisconsin are more localized, this annex assumes that local/county/tribal emergency management agencies will develop specific evacuation plans for...
their respective jurisdictions based on prevailing threats. This state plan is intended as guidance for jurisdictions as specific local plans are developed.

I.A. Purpose

This annex describes the overall process of conducting mass evacuations in Wisconsin. It outlines critical policy, coordination, and planning as well as logistical issues and sets forth general procedures for augmenting large-scale evacuations of one or more of the twelve state-designated population centers (Figure 1) due to large-scale, no-notice incidents.

Figure 1: State-Designated Population Centers

Wisconsin’s Designated Population Centers

I.B. Scope

This annex addresses mass evacuation, including the movement of goods, equipment, animals, or people that may be associated with a catastrophic incident. This annex is closely linked to the Emergency Support Function (ESF) 1 Transportation, Catastrophic Incident Annex, and Wisconsin Mass Care and Recovery Plan Annex.

I.C. Policies

The policies used in a catastrophic incident and this annex are found in the WERP, Basic Plan, Section III – Policies.
II. Planning Assumptions

This annex is generally focused on mass evacuation associated with a catastrophic incident on the state’s 12 largest metropolitan areas. However, the response concepts can be applied to incidents that affect any large population state.

Assumptions

II.A.1. Mass evacuation situations will likely be driven by catastrophic circumstances and such situations expectedly lead to mass care conditions.

II.A.2. In a catastrophic incident that triggers a mass evacuation, areas of the state apart from the 12 state-designated large population areas will be evacuated with limited outside assistance.

II.A.3. Large-scale evacuation during radiological incidents will be governed by existing radiological response plans.

II.A.4. Large-scale evacuations that do occur will be short-range (inside 100 miles) and will be of moderate to extended duration (weeks as opposed to days).

II.A.5. The majority of an affected population will self-evacuate using personal transportation.

II.A.6. The self-evacuation percentage decreases significantly as the severity of the incident increases.

II.A.7. Local municipalities will proactively inventory and track their populations requiring evacuation assistance.

III. Concept of Operations

III.A. General

III.A.1. Evacuation is one element of a large disaster and incident response effort.

III.A.2. Evacuation is a process by which:

a) People are moved from a place where there is immediate or anticipated danger to a place of safety with appropriate temporary shelter facilities.

b) Once the threat to safety is mitigated, these same people return to their normal activities or make suitable alternative arrangements.

III.A.3. Mass evacuation entails:

a) Moving a very large number of people beyond their home jurisdictions into another jurisdiction

b) It requires a robust and multi-jurisdictional effort and the coordination of many disciplines, agencies, and organizations.

III.A.4. Wisconsin’s mass evacuation concept centers on the WisDOT Evacuation Route and Traffic Control Guidance.

a) This guidance sets forth route requirements and resources needed to implement the various evacuation routes.
b) This guidance is centered on Wisconsin’s 12 designated population centers.

c) This guidance is intended to be a supplement to evacuation plans and to serve as a resource to the incident commander when implementing an emergency evacuation order.

d) This guidance is not intended to replace any existing or future comprehensive evacuation plans prepared by local, county, tribal, or state emergency management agencies. Information included in the various attachments to this annex will assist in local plan development.

III.A.5. Local mass evacuation plans should be:

a) Swift, organized, and well-coordinated in execution

b) Pre-planned and exercised, as appropriate

c) Address specific details including:

   (1) Movement of goods, equipment, animals, and people and address eventual re-entry

   (2) Use of all available public and private sector transportation resources including:

       (a) Water

       (b) Ground (i.e., foot, wheeled vehicle, rail)

       (c) Air

   (3) Are pre-planned and exercised to the maximum extent possible

   (4) Are swift, organized, and well-coordinated in execution

   (5) Account for the evacuation of people including people with disabilities and others with access and functional needs, those in hospitals and nursing homes, or residents [including at-risk individuals] without access to transportation as well as service animals and pets;

   (6) Incorporate mechanisms for effective personnel accountability;

   (7) Employ public information including an effective alert notification and communications methodology. Planners are encouraged to incorporate ESF 2 Communication and Warning details in their specific plans.

III.B. Situations

See Catastrophic Incident Annex.

III.C. Mobilization Triggers

III.C.1. The size or complexity of the incident exceed the capabilities or resources that can locally be brought to bear.

III.C.2. The local authorities request state assistance or are unable to provide an adequate response.
III.D. Organization

See Disaster Response Flowchart in the WERP Basic Plan, Section IV (Concept of Operations).

III.E. Annex Activities

</table>
| ESF 1   | Transportation             | • Evacuation, traffic control, transportation systems and resources allocation, and infrastructure repair.  
• While primarily a local, tribal and state responsibility, federal support may be required for large-scale evacuations, organized or self-directed, that may occur. There may also be a need for evacuation of large numbers of people, including patients in local hospitals, nursing homes, and extended care facilities, as well as those with special needs, household pets, and service animals, out of the impacted area to safe areas in other states.  
• Significant transportation and shelter coordination and resources may be required. There is likely to be a significant shortage of response and casualty or evacuee reception capabilities, or both, throughout the impacted area. FEMA will support state(s) in evacuating pets and animals in a declared major disaster. Incident response efforts by local, county, tribal, and state governments, as well as federal agencies, frequently involve components of ESF 1 combined with air operations and flights for evacuation (ESF 5), search and rescue (ESF 9), and public safety and security (ESF 13).  
• In all cases, all operations must be coordinated with the U.S. Department of Transportation (US DOT)/Federal Aviation Administration (FAA), which manages the nation’s airspace and air traffic, before, during, and after a catastrophic incident. |
| ESF 2   | Communications and Warning | • Emergency video and telecommunications  
• Repair and restoration of telecommunications infrastructure  
• Protection, restoration, and sustainment of state cyber and information technology resources  
• Statewide alert and warning mechanisms as well as procedures |
| ESF 3   | Public Works and Engineering | • Infrastructure protection and emergency repair  
• Assist with debris management  
• Infrastructure restoration  
• Engineering services and construction management  
• Critical infrastructure liaison |
| ESF 5   | Emergency Management       | • Collection, analysis, and distribution of information about potential or actual emergencies.  
• Direction and control of state personnel and resources in support of local, county, and tribal emergency management. |
<table>
<thead>
<tr>
<th>Section</th>
<th>Title</th>
<th>Scope</th>
</tr>
</thead>
</table>
| ESF 6   | Mass Care, Emergency Assistance, Housing, and Human Services | • Shelter and mass care, including animal protection, disaster survivor services, and crisis intervention support.  
• The ability to support the provision of temporary shelter, food, emergency first aid, and other essential life support to people, household pets, and service animals in the affected area may be complicated by contaminated resources or facilities and impact the ability to quickly transport resources into the area.  
• In cases of extreme adversity, mass or mega sheltering requirements will affect multi-region, multi-state, or national environments. Planning and preparation for the housing, sheltering, feeding, security, and care will transcend plans for more localized congregate shelter settings.  
• Refer to the Mass Care and Recovery Annex. |
| ESF 7   | Resource Support                          | • Resource acquisition  
• Logistical coordination of the movement of resources  
• Coordination of resource staging areas |
| ESF 8   | Health and Medical Services               | **Public health and medical support**  
• There is a significant need for public health and medical support, including mental health services. Medical and mental health support is required at medical facilities, casualty evacuation, embarkation, debarkation, reception points, community shelters, and other locations to support field operations. In addition, any contamination requirement increases the requirement for technical assistance and resources.  
**Medical support activities, equipment, and supplies**  
• Shortages of available supplies of preventive and therapeutic pharmaceuticals and qualified medical personnel to administer available prophylaxis are likely. Timely distribution of prophylaxis may forestall additional illnesses, and reduce the impact of disease.  
**Casualty transportation and mortuary services**  
• Federal resources may be required to manage the injured, exposed survivors, and deceased if their numbers are extremely high.  
**Survivor decontamination services**  
• Local, tribal, and state officials retain primary responsibility for survivor screening and decontamination operations. ESF 8 can provide technical assistance regarding how they can expand their capability to meet their decontamination requirements. |
| ESF 10  | Oil and Hazardous Materials               | • Oil and hazardous materials (chemical, biological, agricultural, etc.) response, environmental safety, and short- and long-term cleanup.  
**Environmental assessment and decontamination**  
• Incidents involving a chemical, biological, or weapon of mass destruction (WMD) may create significant environmental contamination, resulting in the immediate need to generate information on environmental contamination levels to support emergency decision making to ensure both public and responder protection. In addition, environmental decontamination and cleanup needs for buildings, critical infrastructure, and other areas may overwhelm state, tribal, and local capabilities. |
| ESF 11  | Agriculture and Natural Resources         | • Emergency food distribution  
• Food safety and security |

I. Overview

A daunting challenge in any large-scale evacuation is the safe and effective inclusion of all affected populations. This attachment focuses on those that may be unable to move themselves and may be living in care facilities, in their own homes (with in-home support), or living in someone else’s home. This attachment also includes considerations for providing support for an evacuated population in transit once safely marshaled outside the evacuation area.

I.A. Populations

This attachment will examine the following:

I.A.1. Medical, health, and mental health facilities
I.A.2. People with medical and mental health needs
I.A.3. People with disabilities and others with access and functional needs
I.A.4. Long term care, residential, or in-home regulated or non-regulated providers
I.A.5. Animals

II. Medical, Health, and Mental Health Facilities

II.A. Hospitals

II.A.1. The decision to evacuate a hospital is the responsibility of the hospital administration (hospital incident command) after consultation with building and safety experts, the field incident commander, and other health agencies. Hospitals are encouraged to use existing memoranda of understanding (MOUs) with other hospitals and transportation providers to initiate evacuation procedures.

II.A.2. Each hospital should have a hospital evacuation plan as part of its emergency operations plan (EOP). Evacuation plans address moving patients vertically or horizontally to unaffected areas of the facility (partial evacuation), as well as evacuating the entire facility (full evacuation).1

II.A.3. Generally, hospitals should consider sheltering-in-place before deciding to evacuate their facility. Factors to consider whether to evacuate a facility or shelter-in-place vary based on each type of emergency situation. Patient safety is the primary consideration in the decision to evacuate a hospital.

---

II.B. Other Facilities and Providers

II.B.1. Other medical, health, and mental health care facilities and providers include, but are not limited to:

a) Adult day care facilities

A facility that provides services for part of a day in a group setting to adults who need an enriched social or health-supportive experience, or who may need assistance with activities of daily living, supervision, or protection. Services may include personal care and supervision, provision of meals, medical care, transportation, and activities designed to meet physical, social, and leisure time needs. Adult day care may be provided in family homes, free standing centers, and multi-use facilities such as churches, schools, and senior centers. Adult day care is categorized as follows:

(1) Adult day care center

Care provided for part of a day (e.g., less than 24 hours) in a group facility for adults.

(2) Family adult day care

Care provided for part of a day for small groups of no more than six adults in the home of a provider.

b) Adult family homes

A place where three or four adults who are not related to the operator reside and receive care, treatment, or services that are above the level of room and board and that may include up to seven hours per week of nursing care per resident.

c) Community-based residential facilities

A place where five or more adults who are not related to the operator or administrator and who do not require care above intermediate level nursing care reside and receive care, treatment, or services that are above the level of room and board but that include no more than three hours of nursing care per week per resident.

d) Facilities serving people with developmental disabilities

Also known as Intermediate Care Facilities for Individuals with Intellectual Disabilities (ICF/IID).

A residential facility for three or more unrelated persons with development disabilities. Treatment is provided to help these people maintain and improve their current skills and to develop new skills (e.g., work, social, activities of daily living, education).

e) Personal care agencies

A personal care agency is either a home health agency, county department, independent living center, American Indian tribe or band, or a freestanding personal care agency that provides services that are:

(1) Medically-oriented activities related to assisting an individual with activities of daily living necessary to maintain the individual in his or her place of residence in the community.
(2) Provided upon written orders of a physician by a certified personal care provider, and

(3) Provided by a personal care worker employed by the provider or under contract to the provider who is supervised by a registered nurse according to a written plan of care.

f) Home health agencies

An organization that provides part-time and intermittent skilled nursing and other therapeutic services on a visiting basis to persons in their homes. Skilled care can include but is not limited to wound care to open, infected, or complex wounds; urinary catheterization; teaching safe use of assistive devices, transferring techniques or gait training; medication management for a patient with a complex medical condition.

g) Hospices

An agency that provides care to terminally ill persons who have a life expectancy of 6-12 months. This care can be provided in the person’s home or in another setting (e.g., nursing home, community based residential facility).

h) Nursing homes

A place where five or more persons who are not related to the operator or administrator reside, receive care or treatment and, because of their mental or physical condition, require access to 24-hour nursing services, including limited nursing care, intermediate level nursing care, and skilled nursing services.

i) Outpatient rehabilitation agencies

A clinic or agency intending to provide out-patient rehabilitation therapy as a free-standing facility. These clinics provide physical therapy and speech-language therapy, and might also provide additional therapies including respiratory and occupational therapy.

j) Residential care apartment complexes

Independent apartment units in which the following services are provided: room and board, up to 28 hours per week of supportive care, personal care, and nursing services.

k) Rural health clinics

A clinic that is located in a rural area with a shortage of health care professionals. Services offered are similar to those received in a doctor’s office and are often provided by a nurse practitioner or a physician’s assistant.

II.B.2. Other medical, health, and mental health care facilities may provide long- and short-term care in the same care facility.

II.C. Planning Considerations

II.C.1. Evacuation training and exercises

To reduce demand on limited evacuation resources, municipalities should consider hosting evacuation training and exercises with long-term care facilities. These facilities may include home health agencies or other service providers, depending on the type of
services and providers located within the jurisdiction and what are the known needs of the people with their own communities and jurisdictions.

II.C.2. Contingency plans

It is important to keep in mind that while nursing homes and other congregate care facilities are required to have general evacuation and emergency plans in place to vacate buildings and residences, not all residential care facilities have contingency plans for mass evacuations to other jurisdictions. Regulating and licensing authorities must be taken into consideration when planning for the evacuation of long-term care facilities.

II.C.3. Movement and travel

When considering the movement of clients or residents to avoid hazards, whether within or outside of the facility, facility planners must consider the inherent risk that the movement and travel conditions could have on an individual’s health. Jurisdictions should involve ESF 8 for information and direction on the evacuation of these types of facilities.

II.D. Protective actions

Protective action decisions will be situation-dependent and determined at the time of the incident by the facility’s incident commander and in partnership with local emergency operations center (EOC), if available, and at the time of re-entry, in order to ensure the building is safe. There are several protective action strategies for people who may be medically fragile, including:

II.D.1. Sheltering-in-place

To support a decision to shelter-in-place, facilities should stockpile supplies to meet resident needs. Supplies should include food, water, durable and disposable goods and supplies, and medication.

a) Without moving clients

(1) Depending on the degree of risk, facility staff may decide to remain in place because the threat may have less impact on client health and safety than a voluntary evacuation.

(2) Example:

(a) A facility becomes aware of a chemical release that will affect it within a short period of time and the local government advises staying indoors or evacuating the area.

(b) Evacuation could expose patients or residents to greater risks than sheltering-in-place.

b) On the same level

(1) Example:

(a) An evacuation may be necessary from one side of a building to another based on an approaching or impending threat.

(b) Staff would be expected to identify the path and speed of the threat to ensure a timely movement of their residents, patients, staff, and critical equipment.

c) Vertically (up or down)
For fast-moving, short-duration incidents, it may be necessary to move residents above or below the ground floor.

(a) This is usually done because the time in which to respond to a serious hazard is extremely limited.

(b) Lower-level sheltering may be required for high-wind scenarios or during threats from some human-induced threat (e.g. a nearby impending explosion).

(c) Upper-level sheltering may be required for scenarios involving very fast-moving waters or during the release of low-lying chemicals in the immediate area.

II.D.2. Evacuation

a) Just outside of the facility

b) To a nearby like facility

c) To a distant like facility

d) To a shelter designated as a medical treatment unit (and the originating facility continues to provide all staff and support services).

e) To a shelter designated as a medical treatment unit (if available, local health officials or volunteers may provide staff and support services).

f) Facilities may contact the American Red Cross or The Salvation Army, prior to an incident, to discuss roles and possible resources that might be available from the American Red Cross or The Salvation Army to assist with sheltering needs.

g) The evacuation of residential long-term care facilities will be complicated by the possible risks of moving residents that are significantly medically compromised or dependent on medical equipment.

(1) Moving these residents also includes moving their medical records and supporting pharmaceuticals, medical equipment, disposable products, food, and water.

(2) Specialty trained staff must be available during the evacuation for the care of this population.

III. People with Medical and Mental Health Needs

Individuals who require observation or ongoing treatment will require the support of trained medical professionals. This includes people who live at home with the help of life-support systems, such as dialysis or respirators, as well as people who are severely ill and require home healthcare.

III.A. Dependent on Life-Support Equipment or Home Healthcare

III.A.1. People dependent on life-support equipment or home healthcare should bring the equipment or personal support they receive at home with them, if possible.

a) Medical equipment and supplies may require special handling.

b) Some medications will require secure handling at pick-up points (PUPs), evacuation points (EPs), and reception processing sites (RPSs).
III.A.2. Special planning may need to be considered for the medically fragile, including:

a) General casualty evacuation, in which all casualties with appropriate medical conditions are evacuated

b) Partial casualty evacuation for patients with the most severe conditions that can withstand evacuation

c) Segmented evacuation for patients requiring specialty medical care unavailable in the impacted area or patients discharged or transferred to a lower level of care

III.A.3. Evacuating patients in disasters is a highly complex task. If large-scale patient evacuation is necessary, the National Disaster Medical System (NDMS) program may assist in moving patients identified by local health officials to unaffected communities.

III.B. Mental Health Considerations

III.B.1. Mass evacuations can place stress on people involved regardless of where they might be living and the services they receive.

a) The capacity of these facilities and providers to deal with the psychological consequences of these incidents for patients, families, evacuees, and staff members will be challenged.

b) Psychological effects encompass emotional, behavioral, and cognitive reactions that could result from public health emergencies and mass evacuations.

III.B.2. People with pre-existing and persistent mental illness may be at greater risk for trauma if their therapeutic needs are not maintained.

a) Psychotropic medication and case management services should not be interrupted.

b) Medication noncompliance may be precipitated by a sudden change in environment such as mass evacuation. Efforts to support these individuals in their personal monitoring of their medication compliance and other treatment is essential.

c) Standby support resources may be required in the event of a necessary shift from emergency mental health support to more robust mental health therapy or support for some individuals.

III.B.3. Mental health services should be made available to evacuees for personal and family assistance, psychological first aid, crisis, or other interventions including risk assessments.

III.B.4. The needs of the evacuees may vary. Some factors may include existing mental health condition(s), age, and level of exposure to traumatic incidents. Certain groups will be more vulnerable and therefore may require additional considerations:

a) Persons with severe and persistent mental illness may need more focused treatment including medication adjustment.

b) Although most children are resilient, below are some examples of normal reactions that children may exhibit during and post disaster:

(1) Infants may react to trauma by being irritable, crying more than usual, or wanting to be held and cuddled.

(2) Children three to six years of age often feel helpless and powerless and as a result, may feel fear and insecurity about being separated from caregivers. They may also engage in activities that reenact the incident/disaster.
(3) Children seven to ten years of age have the ability to understand loss and may become preoccupied with details of the disaster. Some of their reactions may include sadness, fear of the disaster reoccurring, and anger about the incident not being prevented.

(4) Children 11 to 18 years of age have a better understanding of the disaster and responses may be similar to adults. Some teenagers may become involved in risk-taking behaviors such as reckless driving or use of alcohol or drugs, while others may be afraid to leave their home and therefore isolate themselves.

IV. People with Disabilities and Others with Access and Functional Needs

IV.A. General Considerations

IV.A.1. Authorities at all levels have placed great emphasis on emergency planning for people with disabilities and others with access and functional needs.

IV.A.2. Services for people with disabilities and others with access and functional needs during an emergency are defined by the Federal Emergency Management Agency (FEMA) as:

a) Those actions, services, accommodations, as well as programmatic, architectural, and communication modifications that a covered entity must undertake or provide to afford individuals with disabilities a full and equal opportunity to use and enjoy programs, services, activities, goods, facilities, privileges, advantages, and accommodations in the most integrated setting. These actions are in light of the exigent circumstances of the emergency and the legal obligation to undertake advance planning and prepare to meet the disability-related needs of individuals who have disabilities as defined by the ADA Amendments Act of 2008, P.L. 110-325, and those associated with them.

b) Inclusive of modifications to programs, policies, procedures, architecture, equipment, services, supplies, and communication methods. Examples of access and functional needs services may include a reasonable modification of a policy, practice, procedure or the provision of auxiliary aids and services to achieve effective communication, including:

(1) An exception for service animals in an emergency shelter where there is a no-pets policy

(2) Providing way-finding assistance to someone who is blind to orient to new surroundings

(3) Transferring and providing toileting assistance to an individual with a mobility disability

---

Inclusive Evacuation

November 2017

Wisconsin Emergency Response Plan
Planning Considerations for the Evacuation of Unique Populations

(4) Providing an interpreter to someone who is deaf and seeks to fill out paperwork for public benefits

c) The needs of people with disabilities and others with access and functional needs is vast and diverse. Planning for evacuation assistance is more effective with the added involvement of individuals from these communities, as well as representatives from organizations and agencies serving those populations.

d) Members of this community often require more time to evacuate. Emergency planners should consider a phased evacuation, if possible, wherein evacuation recommendations are issued for people with disabilities and others with access and functional needs before general evacuation orders are issued.

e) Transportation planning should include consideration of:

(1) The need to keep people with disabilities and others with access and functional needs of any age with their families or caregivers

(2) The need to keep people with disabilities and others with access and functional needs together with their mobility devices, other durable medical products, or service animals

(3) The establishment of a mechanism to track equipment when life safety requires separation from the owner during evacuation, procedures for which should include making every reasonable attempt to not separate equipment from its owner

(4) The need to keep children and their parents or guardians together

(5) The establishment of a system to provide temporary replacement of transportation devices and equipment during evacuation

(6) The use of vehicles equipped to transport personal mobility equipment and devices

f) Communication planning should include consideration of:

(1) Involving people with disabilities and others with access and functional needs and people with diverse expertise working with this community as part of the decision-making process to determine the most effective and appropriate communication procedures

(2) Engaging service providers, trusted community leaders, and representatives who can communicate effectively with this community

(3) Partnering with service agencies related to the target population (e.g. faith-based organizations and non-governmental trusted community partners, refugee resettlement agencies; cultural- and linguistic-appropriate service providers and organizations, and senior centers) and developing formal agreements to provide messaging in case of emergencies and discussing opportunities to reach people with disabilities and others with access and functional needs

(4) Collaborating with organizations involved in emergency preparedness planning and service delivery to the community to coordinate efforts and provide training

g) Effective planning for people with disabilities and others with access and functional needs will address supporting individuals and determining level of accommodations required while protecting individual privacy concerns. Some methods to accomplish these goals may include:

(1) Reaching out and determining long-term care facilities and providers within the jurisdiction that serve people with disabilities and others with access and
Inclusive Evacuation

(1) functional needs (e.g., independent living centers, congregate care facilities, assisted living facilities, community-based residential facilities, etc.)

(2) Working with trusted community partners that have specific relationships with people who need additional services to gain a greater understanding of what resources may need to be provided.

(3) Planning to coordinate with call centers for public hotlines and media resources at the time of an evacuation where the public can learn what resources are available and report specific known challenges or locations that might impact people with disabilities and others with access and functional needs.

h) A number of long-term care facilities exist in different jurisdictions.

(1) These facilities provide a range of services and group activities, assistance with daily living, rehabilitation, healthcare, or personal assistance care, depending on their designation and the residents, clients, or consumers under their care or supervision.

(2) For the identification of facilities housing people with disabilities and others with access and functional needs, planners should consult with the Wisconsin Department of Health Services (WI DHS)/Division of Quality Assurance provider search for statewide list of directories by provider type.

i) Services may also be rendered in non-institutional or non-group settings, such as home hospice care, home healthcare, and personal-assistant care at home through private vendors.

(1) In addition, many people with disabilities and others with access and functional needs have arrangements at home with family caregivers for assistance with activities of daily living, or are supervised by caregivers within the family, or with friends and neighbors.

(2) Planners should work with their communities to develop resources for preparedness and evacuation contingencies for those who will need additional assistance in an emergency evacuation.

j) For those individuals receiving care outside of either private or government-assisted care settings, appropriate and effective messaging needs to be used. A robust public education campaign emphasizing the importance of personal and family preparedness will be an effective method to provide pre-disaster assistance to the entire community, which benefits people with disabilities and others with access and functional needs.

k) Planners should consider reaching out to community groups and other organizations that understand and support the needs of populations they serve to encourage people with disabilities and others with access and functional needs to voluntarily register. Such groups, other than those previously mentioned, could include the following:

(1) Community-based organizations

---

3 http://www.dhs.wisconsin.gov/bqaconsumer/search.htm
(a) Senior civic organizations
(b) Recreation groups
(c) Homeowner associations
(d) Cultural organizations
(e) Young Men’s Club of America (YMCA) and Young Women’s Club of America (YWCA)
(f) Professional associations
(g) School-affiliated groups

(2) Faith-based organizations (FBOs) and private companies
(a) Places of worship (e.g., churches, synagogues, mosques)
(b) Health insurance companies
(c) Utility companies
(d) Ethnic media outlets
(e) Transportation providers (when discounted fares are provided to those with disabilities and others with access and functional needs, registration may be required for eligibility)
(f) Employers (may provide educational information addressing registries and their application in regards to assisting people with disabilities and others with access and functional needs for employees and their families)

(3) Private, philanthropic, and benevolent organizations
(a) Kiwanis
(b) Lions Club
(c) Rotary Club
(d) Elks, Moose, and Eagles clubs
(e) Private foundations

(4) Communications and messaging needs should be structured to reach those individuals in need of assistance, but that have not been identified through the previously mentioned methods. People with specific communication challenges may include the following:
(a) Those who are deaf or hearing impaired
(b) Those who are blind or have severe vision impairments
(c) Those who are non-English–speaking or those who have a limited ability to understand English
(d) Those who are not able to communicate without translators or are without the means to interact through verbal or written communications

(5) A critical group to consider would be all others who will need assistance, but are not pre-identified in any form of database or mapping system. This includes (but is not all-inclusive) the following:
(a) Those who develop emergent needs because of the disaster, such as spontaneous stress disorders or injuries

(b) Those who have a recurrence of an otherwise dormant health condition

(c) Minors temporarily separated from their guardians

(d) Pre-disaster homeless populations

(e) Those receiving private, independent in-home care

IV.B. Outreach

IV.B.1. Care facility clients:

a) Determine the care facilities and program providers within the community and establish collaborative stakeholder relationships within the jurisdictions and service areas

b) Identify and catalog by location the number and specific needs of clients

(1) A number of other factors may help determine immediate needs for in-home clients or residents.

(a) Level of social isolation due to the lack of a caregiver or responsible family member

(b) Blindness or significant visual impairment

(c) A need for physical assistance in order to evacuate

c) Establish contact and assess the level of preparedness or existence of facility emergency plans

(1) Planners should review care facility EOPs to determine their capabilities for self-evacuation, including:

(a) Pre-designated destinations that offer a similar level of care and capability

(b) MOUs with transportation companies or other means of evacuation transportation for people in their care5 (ideally, these facilities should identify three potential evacuation transportation providers)5

(c) Facility self-sufficiency or its ability to support the people in their care with food, water, medical supplies, or other resources that may be necessary during an evacuation or if the facility should have to shelter-in-place

4 During a catastrophic evacuation, transportation resources, especially those that can accommodate persons with disabilities and others with access and functional needs, become scarce, critical resources. The organization overseeing care sites should, in conjunction with the operational area’s emergency management department, review and identify those agreements that promise the same resource to multiple sources. In addition, transportation resource providers should be required to maintain or develop COOP plans to ensure that there is not a gap in service.

Wisconsin Emergency Response Plan  
Planning Considerations for the Evacuation of Unique Populations

(i) Consider determining if the facility has transportation resources or other types of resources they may be able to contribute to the evacuation effort if their facility is not affected

(d) The identification of staff and support personnel that may have to participate in the evacuation of people under their care, and provide a contact list of personnel or chain of command contact information that is checked and updated periodically

(e) The assurance that the facility emergency plan includes a risk assessment and contingency plan that includes what the facility may need in the event of an emergency (e.g. food, water, fuel, and medical supplies)

(f) The assurance that the facility emergency plan includes scheduled training exercises and plan maintenance that includes periodic reviews of procedures, staff updates, contact information, and MOUs

d) Determine available resources to meet needs beyond the facilities’ plans, including:

   (1) Transportation
   (2) Equipment or supplies
   (3) Care facilities and existing providers within and outside of the immediate jurisdiction

e) Create resource lists and emergency contact information, preferably matching existing providers with their clients

IV.B.2. Using risk assessments and geographic information systems (GIS) mapping for people with disabilities and others with access and functional needs.

   a) Identify potential emergency situations that could impact groups and determine methodologies to address these risks. Planners should consider performing risk assessments to anticipate situations that can impede or impact the safe evacuation of people with disabilities and others with access and functional needs.

   b) Local planners should determine the locations and needs of people with disabilities and others with access and functional needs in their local jurisdiction.

   c) Consider the input of this information into a GIS mapping system for tracking and easy identification purposes.

IV.B.3. People with specific communications challenges

   a) Know who lives in your community in order to offer culturally and linguistically-appropriate services to the jurisdiction. The Wisconsin Department of Health Services/Office of Civil Rights and the Department of Children & Families (DCF) Refugee Health Program can assist with gathering this type of information.

   b) Planners should use multiple forms of messaging to ensure effective communications with all populations. Some tools for diverse messaging include:
Wisconsin Emergency Response Plan
Planning Considerations for the Evacuation of Unique Populations

(1) Teletypewriter (TTY)
(2) Video Relay Service (VRS) or Video Interpreting Service
(3) Text messaging
(4) Closed caption
(5) Social media
(6) Nixle
(7) Signboards or visual translators
(8) Sign language
(9) Multiple languages
(10) Public service announcements (PSAs) on electronic media
(11) Door-to-door neighborhood and community outreach

c) Planners should consider establishing a system to solicit feedback from targeted populations to modify and enhance outreach approaches and review post-incident reports from incidents or exercises to identify areas for improvement in messaging and methods.

d) Planners should consider working with Wisconsin Voluntary Organizations Active in Disaster (WI VOAD), local long-term recovery committees, and community agencies active in disaster organizations, nonprofit and other community-based organizations, as well as private organizations that can gather feedback and submit it to the jurisdiction.

IV.B.4. Other populations which may need assistance, but have not been otherwise pre-identified

a) The number of people with disabilities and others with access or functional needs who have not been pre-identified can be reduced through robust public outreach and education.

b) Even with significant outreach and pre-identification, planning must include resources and the processes necessary to respond to emerging needs.

c) Planning must take into account the needs of unaccompanied minors.

---

TTY or Telecommunications Device for the Deaf (TDD) is becoming obsolete due to the widely pervasive emergence of VRS, also sometimes known as a Video Interpreting Service, a video telecommunication service that allows deaf or hard-of-hearing individuals to communicate over video telephones and similar technologies with hearing people in real-time via a sign-language interpreter.

Nixle, founded in 2007, is a privately held U.S. corporation that offers both free and paid notification services for local police departments, county emergency management offices, municipal governments and their agencies. The Nixle service allows verified government agencies to send messages to local residents via phone, email and web. Information is delivered almost instantly to geographically targeted consumers. In 2011, Nixle served in excess of 4,600 government agencies and organizations in all 50 states. By August 1, 2012, 6,000 agencies and 1,000,000 subscribers were registered to use the Nixle service. For more information, go to: http://www.nixle.com/
Inclusive Evacuation

**Wisconsin Emergency Response Plan**

**Planning Considerations for the Evacuation of Unique Populations**

(1) Planners must give proper attention to the needs and protection of minors who may be left unaccompanied by parents or other caregivers. The custody and security of unaccompanied minors must be maintained at all times and reunification made a priority. Tracking of these individuals should begin on initial contact and according to the local jurisdiction’s procedures.

(2) For Wisconsin, when an individual is identified as an unaccompanied minor, law enforcement, in cooperation with Child Protective Services, is responsible for the custody and security of the minor until reunification happens. Tracking through standard custody procedures is required.

d) Planning must take into account the needs of pre-disaster homeless populations.

(1) Planners should consider establishing a PUP or EP near major homeless shelters. This population tends to congregate near the larger shelters that provide extended services.

(2) Local homeless outreach teams from agencies serving the homeless populations and service providers [e.g. Healthcare for the Homeless and Programs for Assisting in the Transition from Homelessness (PATH)] should be incorporated into the planning process. They can assist with locating and evacuating homeless people who are in more isolated areas. Generally, these outreach teams know hotspots where socially isolated homeless people tend to reside and who these people are.

(a) Outreach teams should be tasked with communicating the types of evacuation messages that will be issued and the urgency with which the homeless population should take them.

(3) Planners need to determine their policy for what people can take in an evacuation. Many homeless people will want to take all their belongings and pets. Policies about personal items should be clearly stated and consistently applied and enforced.

(4) Homeless populations have a higher preponderance of mental health illnesses and related issues.

e) Planners should consult with their local mental health or public health department to identify strategies and procedures for staff supporting the evacuation of this population.

**IV.C. Public Preparedness and Education**

IV.C.1. Planners should establish a robust, diverse, wide-reaching public preparedness campaign to reach all individuals who may need additional help in the incident.

a) Planners should consider using multiple methods to reach the most individuals in their jurisdiction. Some options to consider for the distribution of preparedness information are:

(1) **Neighborhood programs**

(2) **Volunteer programs**

(3) **Community programs**

To identify and assist neighbors or other members of the community who may have needs
Faith Based Organizations

Religious organizations have a strong network and are very influential with the members of their congregation. Efforts should be made to invite these members of the community to the planning table and become familiar with their network since they may have access to resources and staffing that can provide a support system to the members of their congregation in the event of an emergency.

b) Non-governmental organizations (NGOs)

Community and senior programs (i.e., Meals on Wheels) can spread and disseminate preparedness information.

IV.C.2. Preparedness messages and information should:

a) Warn the members of the community that first responders and emergency system may be significantly taxed in a large-scale emergency and that they must take the necessary steps to ensure that they can be as self-sufficient as possible.

b) Advise members of the community who may have unique needs to do the following:

(1) Establish a support system with family members, neighbors, or friends. Secondary or alternate caregivers should be identified as a part of the support system.

(2) Maintain emergency kits, food, and water to last a minimum of three days, and preferably up to seven days for sheltering-in-place. However, having supplies for longer durations is advisable if refrigeration and storage are not limiting factors (Attachment 4 contains more information on what to bring during an evacuation).

(a) If an emergency kit cannot be put together or developed, people with disabilities and others with access and functional needs should develop and carry with them a list of essential equipment or items that they are likely to use on a regular basis.

(3) Listen to local officials’ messaging for guidance on what to bring with them and what to leave at home, since evacuation kits containing food, water, and other supplies may be too bulky or big for self-evacuees to transport or take on government-assisted evacuation vehicles that require rapid movement with limited space.

(4) Create a list of illnesses or medical conditions and maintain an additional supply of medication that may be needed for up to two weeks; however, in some cases, a four-week supply can, and should, be brought along if storage and refrigeration are not limiting factors.

(5) Develop and maintain emergency contact lists and phone numbers, which should include out-of-state contacts.

(6) Provide a description of what the immediate capabilities of responders are and what evacuees can generally expect to occur, including a description of the proposed services available at each receiving site.

IV.D. Evacuation Information

IV.D.1. For effective evacuation planning, it is essential to understand and provide adequate resources to the location where people with disabilities and others with access and functional needs live and work. The following is guidance on how to work toward this level of awareness:
a) Work with public health and human services-related organizations and professionals as well as service organizations to identify existing known providers who may know who will likely require evacuation assistance.

b) Identify and map licensed care facilities and congregate senior housing complexes and other child care and family group homes.

IV.D.2. Identifying accessible transportation resources is important to quickly deploy resources that meet the particular requirements of people with disabilities and others with access and functional needs. Fleets that can be particularly helpful include:

a) Public bus operations
b) Private accessible transportation or access services
c) Medicaid transportation providers
d) Senior centers
e) School district transportation systems
f) Airport car rentals and shuttle buses or vans
g) Healthcare center vendors
h) Ambulance providers
i) NGO transportation providers (e.g. United Cerebral Palsy, regional and developmental centers and their vendors, adult day healthcare centers, and senior centers)

V. Long-Term Care, Residential, or In-home Providers

V.A. Care and Assistance

V.A.1. Programs and Services
Care and assistance for adults and children with disabilities and others with access and functional needs may be provided through:

a) Formalized governmental programs
b) Private home care and assistance services

V.A.2. Delivery
These programs and services may be delivered in private homes, facilities, activity centers, day care centers, and workplaces.

V.A.3. Evacuation plans
Owners and operators of homes and facilities will be expected to have safety and preparedness procedures and evacuation plans in place to implement once the evacuation has commenced. Plans and procedures should include:

a) Transportation arrangements
That meet their specific requirements to effectively evacuate their clients and residents within their facilities to:

(1) Designated areas that they are directed to, or
V.B. Facilities and Centers

V.B.1. Assisted Living Facilities

Services provided at these facilities are associated with activities of daily living and include many homes, residences, and facilities with varying levels of medical care at levels just below long-term care facilities. Although many of these facilities have residents and clients without daily medical needs or medical supervision, there are a number of facilities where the majority of their residents need continuous medical care. Assisted living facilities may be associated with nursing homes, affiliated with other similar facilities, or independently owned and operated.

V.B.2. Vocational Rehabilitation Work Centers

These facilities employ individuals with developmental disabilities in the community.

a) Community rehabilitation programs

Community-based organizations that provide vocational rehabilitation services

b) Individual service providers

Independent contractors who assist people with disabilities and others with access and functional needs to participate in vocational rehabilitation services and to achieve and maintain an employment outcome.

V.B.3. Care Facilities

DCF and WI DHS license care facilities for people who cannot live alone but who do not need extensive medical services. Services typically include help with medications and assistance with personal hygiene, dressing, and grooming. Some facilities may provide supervision and programs for individuals who have Alzheimer's disease or other types of dementia. These facilities include:

a) Child care centers and family child care homes

b) Children's residential facilities

c) Adult and elderly facilities

d) Adult day programs

e) Adult residential facilities

f) Adult residential facility for persons with special health care needs

g) Residential care facilities for the chronically ill

h) Residential Care Facilities for the Elderly (RCFEs)

---

8 Adult day programs means any community-based facility or program that provides care to people 18 years of age or older in need of personal services, supervision, or assistance essential for sustaining the activities of daily living or for the protection of these individuals on less than a 24-hour basis.
Inclusive Evacuation

November 2017

Wisconsin Emergency Response Plan
Planning Considerations for the Evacuation of Unique Populations

(1) May also be known as assisted living facilities, retirement homes, and board and care homes.

(2) These facilities can range in size from six beds or less to more than 100 beds.

(3) The residents in these facilities require varying levels of personal care and protective supervision.

i) Residential care apartment complexes

Where services promised in a continuing care contract are provided.

j) Various child, adolescent, and adult family homes or other community based residential facilities may provide 24-hour non-medical care and supervision in a group setting to people recovering from mental illnesses who temporarily need assistance, guidance, or counseling.

k) Special agencies (i.e., adoption and foster-family agencies).

V.B.4. Independent Living Facilities/Homes

Independent living is a service provided to adults with developmental disabilities that offers functional-skills training necessary to secure a self-sustaining, independent living situation in the community or may provide the support necessary to maintain those skills. Individuals typically live alone or with roommates in their own homes or apartments. These homes are not licensed.

V.B.5. Adult Day Care

Adult day care centers are designed to provide care and companionship for seniors who need assistance or supervision during the day.

a) Adult social day care provides social activities, meals, recreation, and some health-related services.

b) Adult day health care offers more intensive health, therapeutic, and social services for individuals with severe medical problems and those at risk of requiring nursing home care.

V.B.6. Adult Residential Facilities

An adult residential facility is a facility of any capacity that provides:

a) 24-hour non-medical care for adults ages 18 through 59 who are unable to provide for their own daily needs.

b) Adults may be physically handicapped, developmentally disabled, and/or mentally disabled.

V.B.7. Homeless Shelters

A homeless shelter is any facility that provides an individual or family with a bed or cot to sleep on for a specified number of nights. Some shelters house only a few clients, while others house hundreds. Some shelters may house clients for a single night, while others may house clients for more than two years. Most shelters will typically have at least one staff member on duty 24-hours a day to provide services and supervision to their clients.

a) Homeless shelters generally serve a very diverse population, many with functional needs (e.g., mental or physical disabilities, substance abuse issues, and chronic health conditions).
b) Clients will range in age from newborns to the elderly.

c) Evacuation

(1) Decision

The decision to evacuate may be:

(a) voluntary, or

(b) Required as determined by local law enforcement or fire officials

(2) Transportation

(a) Those shelters with transportation capabilities should attempt to transport clients to evacuation facilities.

(b) Since most shelters do not have the capability to move a large number of clients, shelter staff should coordinate with local authorities and the Transportation Branch at the EOC to determine an efficient way to transport clients safely.

(3) Belongings and pets

(a) Information should be clearly presented as to what personal possessions or pets may be allowed to be taken during an evacuation.

(b) Some people may not choose to evacuate if they cannot bring their personal belongings or pets.

VI. Evacuation of Animals

The Pets Evacuation and Transportation Standards (PETS) Act of 2006 requires local and state emergency preparedness authorities to include in their evacuation plans how they will accommodate household pets and service animals in the event of a major disaster.⁹

VI.A. Service Animals

VI.A.1. Service animals are essential to the continued independence of people with disabilities and others with access and functional needs and should be evacuated with the person.¹⁰

a) The Americans with Disabilities Act requires that service animals be permitted in any area accessible to the general public. This includes:

(1) Public transportation

(2) Shelters

---

Inclusive Evacuation

November 2017

(3) And, any other location accessible to the general public

b) All service animals must behave appropriately and remain under the owner’s control at all times in order to remain in the shelter.

VI.A.2. Service animal identification

a) Service animals must be allowed to accompany their owners when that owner reports to staff that “this is my service/assistance/disability dog.”

b) According to the U.S. Department of Transportation (US DOT), service animals are not registered in any way, so responders must trust the evacuees’ word in designating these animals as service animals.

VI.A.3. Service animal definitions

a) Federal

The 2010 ADA standards define a service animal as a dog of any breed or size, or a miniature horse that is individually trained to do work or perform tasks for an individual with a disability.

b) State

Wisconsin state law expands this definition to include a guide dog, signal dog, or other animal that is individually trained or is being trained to do work or perform tasks for the benefit of a person with a disability, including:

1) The work or task of guiding a person with impaired vision
2) Alerting a person with impaired hearing to intruders or sound
3) Providing minimal protection or rescue work
4) Pulling a wheelchair
5) Fetching dropped items

c) The crime deterrent effects of an animal’s presence and the provision of emotional support, well-being, comfort, or companionship in the absence of a disability do not constitute work or tasks for the purposes of these definitions.

d) Qualified disabilities include physical, sensory, psychiatric, or other mental disability.

e) The county or tribe must apply the reasonable modification policy if an owner presents an alternate species of service animal.

VI.A.4. Types of service animal work or tasks:

a) Guiding individuals who are blind or have low vision with navigation and other tasks
b) Alerting individuals who are deaf or hard of hearing to the presence of people or sounds
c) Assisting an individual during a seizure
d) Alerting individuals to the presence of allergens
e) Providing physical support and assistance with balance and stability to individuals with mobility needs
f) Helping persons with psychiatric and neurological needs by preventing or interrupting impulsive or destructive behaviors
VI.B. Household Pets

VI.B.1. Definition

A "household pet" is an animal from a traditional companion animal species: dog, domestic cat, ferret, pet bird, rabbit, or domestic rodent (gerbil, guinea pig, hamster, or domestic mouse or rat). All other animals kept as pets, including dog hybrids and domestic cat hybrids, are either considered livestock or exotic pets.

VI.B.2. Evacuation

When the evacuation of an area is called for, evacuees are encouraged to take their pets with them.

a) Past evacuations have shown that:
(1) pet owners may refuse to evacuate their homes if they are unable to bring their pet(s) with them, or
(2) will reenter disaster zones in order to retrieve animals that were left behind

b) Animals that are turned loose or left behind to fend for themselves are likely to become victims of starvation, predators, contaminated food or water, accidents, or exposure to the elements.11

VI.B.3. Planning Considerations

One of the most challenging issues for pet owners is finding a shelter that accepts household pets or finding a pet shelter located next to a shelter where the owner stays so that owners can care for their pets. The following points should be taken into consideration when planning for household pets and evacuation. This strategy places responsibility on the individual owners and will need to be clearly communicated through community preparedness outreach:

a) Like their owners, pets need identification, including call name, owner name, address, telephone, shot records, and medications. Plans should include providing the public with clear guidance regarding the necessity of having this information about their pets.

b) It is assumed that residents who have their own means of transportation will evacuate household pets.

c) Residents who do not have access to vehicles will need to secure their pets in cages or carriers before they use public transportation and/or arrive at the pick-up points.

d) Emergency planners should develop a tracking methodology for evacuated pets.

e) Plans should address waste disposal, as well as potentially feeding and watering depending on the duration of the evacuation, during the transportation process.

f) Memorandums of understanding (MOUs) need to be formalized with other agencies or organizations, especially for the transportation of large animals, such as horses. In

---

addition, potential volunteer resources and private groups should be identified and tracked by local EOCs.

g) Only non-emergency resources and personnel, such as public and private animal services agencies, will be used to rescue and transport animals during an evacuation effort.\textsuperscript{12}

VI.C. Livestock, Wild Birds, and Exotic Animals\textsuperscript{13}

VI.C.1. Any cattle, sheep, swine, goat, or any horse, mule, or other equine whether live or dead is considered livestock.

a) Pet pigs, including Vietnamese potbelly pigs, miniature pigs, “micro” or “teacup” pigs, are also classified as livestock.

b) Backyard bird flocks and pet poultry are classified as livestock.

c) Raptors and other wild bird species are considered “wild animals” and require special handling (see Wisconsin DNR captive wildlife web page).\textsuperscript{14}

VI.C.2. An “exotic pet” is any companion animal other than a dog, domestic housecat, ferret, pet bird, rabbit, or domestic rodent (gerbil, guinea pig, hamster, or domestic mouse or rat). Note that some animal species that have been kept as pets may not be imported into Wisconsin because they are known carriers of highly contagious diseases.

a) These animals include North American prairie dogs and the following African-origin species: tree squirrels, rope squirrels, dormice, Gambian giant pouched rats, brush-tailed porcupines, and striped mice.

b) These species should not be in the state and should not be evacuated.

VI.C.3. For all other species, it is not determined on the state level if it is legal to own a particular animal species.

a) Planners are strongly encouraged to consult with their local animal management agencies when drafting animal evacuation plans.

b) In general, if the animal is legally owned in Wisconsin, its handling should be covered in evacuation plans.

VI.C.4. Some members of the public have livestock or exotic animals as pets or economic assets.

a) Livestock owners have the responsibility to prepare for the evacuation of their livestock in an emergency or disaster.

b) Jurisdictions may plan to assist in the transport of these animals out of danger zones and in their sheltering.
c) Establishing good relationships with stables and farms within jurisdictions is important.

VI.C.5. Exotic animals, such as snakes and monkeys, will need sheltering, especially if they are housed in sanctuaries that have to evacuate.

a) Local zoos may be able to assist but may also need the local jurisdiction’s support when they have to evacuate.

b) Ultimately, the owners or managers of zoos and wild or exotic animal sanctuaries are responsible for having an emergency response plan in place as well as for making arrangements for the evacuation of these animals.

VI.C.6. Evacuation to sites that can accommodate particular exotic animals should be considered. Depending on the types and varieties of animals, it is likely that they will have to be distributed to the appropriate sites that meet their needs in terms of space, environment, habitat, and care.

VI.C.7. Livestock and exotic animals that are displaced and roaming at large may create a public safety issue and should be considered in planning.

VI.D. Evacuation of Household Pets and Service Animals

Due to the lessons learned from Hurricane Katrina, the PETS Act of 2006, which amends the Stafford Act, was established and requires evacuation plans to take into account the needs of individuals with household pets and service animals prior to, during, and following a major disaster or emergency.

VI.D.1. Ensuring for the transportation, care, and sheltering of household pets and service animals is an important factor in evacuation planning.

a) Many people will refuse to evacuate their homes if they cannot take their household pets with them.

b) It is estimated that up to 25 percent of household pet owners will completely fail to evacuate because of their animals.

c) Furthermore, about 30 to 50 percent of household pet owners will leave pets behind, and approximately 50 to 70 percent of those individuals who leave animals behind will attempt to reenter an evacuated site to rescue their animals.15

d) Therefore, it is imperative that evacuation plans address household pet and service animal evacuation and sheltering procedures to protect both human and animal health and safety.

VI.D.2. State and local governments that shelter evacuees from areas declared a major disaster or emergency can seek reimbursement for eligible household pet and service animal–related costs through FEMA. The PETS Act establishes that eligible reimbursement costs include jurisdictional expenses to set up and operate pet shelters, including veterinary care and animal care staff costs.

VI.D.3. Planners should consider using animal control officers, the HSUS, and private animal care shelters to assist with the rescue, transport, and sheltering of large and small animals.

a) Only non-emergency resources and personnel, such as public and private animal services agencies, including volunteer groups, should be used to rescue and transport animals during an evacuation effort.

b) It is recommended that animal control officers work with animal services agencies and volunteers to develop an animal tracking methodology.

VI.D.4. It is recognized that owners may refuse to evacuate their homes if they are required to leave their pets behind. Individual jurisdictions should identify strategies to address pet evacuations.

VI.D.5. Jurisdictions should not assume that owners will have their own means (e.g. trailers) for transporting large animals. In addition, potential volunteer resources and private groups should be identified and tracked. Jurisdictions can also:

a) Provide pet owners with information of nearby kennels, animal shelters, and veterinary clinics that may be able to be temporarily shelter their pets

b) Set up temporary pet shelters at fairgrounds, parks, and other similar facilities

VI.D.6. If local resources for evacuation become overwhelmed during the disaster response, the local EOC will request assistance through the regional emergency manager or to the SEOC from the Department of Agriculture, Trade & Consumer Protection (DATCP), which is the lead agency for the WI Animal Response Emergency System. If necessary, the DATCP will coordinate requests for federal assistance.

# Table of Figures

Figure 1: Evacuee Flow Charts ........................................................................................................ 7
I. Evacuation Transportation

I.A. Introduction and Purpose

As part of the evacuation planning process, jurisdictions should include their transit providers in their plans to determine available personnel, resources, and procedures. Transportation may include private vehicles, buses, rail, wheelchair-accessible vehicles, vans, ambulances, military-type transport vehicles, pedestrian evacuation, and other public or private transport. The identification of available transportation resources and coordination of those limited resources is paramount to any evacuation’s success. The 2006 Nationwide Plan Review Phase 2 Report \(^1\) indicates that “a critical but often overlooked component of the evacuation process is the availability of timely accessible transportation – especially lift-equipped vehicles.” Establishing solid agreements with vendors and detailing specialized services and equipment needed before an event is critical.

Transportation for evacuation is recognized as one of the most important elements of the larger disaster and incident response effort. Such transportation plans may include:

- I.A.1. A recommended command structure for the activated transportation branch during evacuation operations
- I.A.2. Guidelines addressing personal vehicle evacuation and those needing transportation assistance
- I.A.3. Strategies for using all modes of transportation
- I.A.4. Recommendations for transportation pick-up points (PUPs), evacuation points (EPs), Regional Hub Reception Centers (RHRCs), evacuation routes, and traffic and access control
- I.A.5. Specific protocols for activating and demobilizing the transportation plan
- I.A.6. The integration of the potential needs and specific services for people with disabilities and others with access and functional needs populations

I.B. Transportation Resource Coordination

I.B.1. Evacuating jurisdictions should establish an incident command system (ICS)–compliant entity that is responsible for communication and coordination between responding agencies with transportation resources and personnel. In most cases, local jurisdictions should consider including:

- a) Law enforcement
- b) Transportation (e.g., highways, ports)
- c) Transit (e.g., bus, rail)
- d) Social services (e.g., mass care)

\(^1\) [http://www.in.gov/ipscc/files/Prep_NationwidePlanReview.pdf](http://www.in.gov/ipscc/files/Prep_NationwidePlanReview.pdf)
e) Service organizations serving people with disabilities and others with access and functional needs

f) Private-sector representatives, as appropriate

I.B.2. To maintain consistency with the National Incident Management System (NIMS) and the National Response Framework (NRF), it is recommended that this coordination element be assigned within the emergency operations center (EOC) under operations or planning, depending on how the jurisdiction operates. Specific sub-components focused on surface, maritime, and aviation operations may be activated, to support evacuation requirements, as appropriate.

I.B.3. The coordination element is charged with identifying transportation solutions and coordinating transportation resources to help meet evacuation and incident objectives.

I.B.4. It is recommended that the coordination element consider dispatching liaisons to the Wisconsin Department of Transportation (WisDOT)/Traffic Management Center (TMC) in Milwaukee.

I.B.5. Planning should include methods to receive and route requests for transportation and other assistance, which include teletypewriter (TTY) capabilities, at response time. The inclusion of all potential transportation providers in a transportation branch is essential.

I.C. Evacuation Route Planning

I.C.1. Primary evacuation routes in Wisconsin’s 12 largest population areas consist of the major interstates, highways, and prime arterials. See the WisDOT Evacuation Route and Traffic Control Guidance for each area.

I.C.2. Local jurisdictions should pre-identify evacuation routes for probable hazards.

I.C.3. The jurisdictional coordination element should coordinate with the state or county EOC to assess the viability of identified evacuation routes in relation to real-time capacities of transportation infrastructure.

I.D. Vehicle Staging Areas

I.D.1. Staging areas should be established for the check-in and mobilization of transportation resources.

I.D.2. Staging areas should be pre-identified based on hazard and risk assessments and need, when possible.

I.D.3. The selection of staging areas should preferably be made by the county EOC in coordination with transit agencies and based on incident impacts and evacuation resource needs.

I.E. Pick-up Points and Evacuation Assembly Points (EAPs)

I.E.1. Transportation coordinators and local jurisdictions will work with county and state emergency management agencies to identify and establish PUPs in the event of a catastrophic incident.

I.E.2. Planners should consider using existing bus stops as PUPs during an evacuation and coordinate with local transit agencies who service those stops. Other PUPs may need to be identified and added to service routes, as needed.
I.E.3. Planners should include flexibility in plans to add locations where people are likely to congregate to serve as PUPs.

I.E.4. To the maximum extent possible, given resource limitations and risk to responders, people with disabilities and others with access and functional needs who cannot reach these PUPs should be collected curbside at their respective locations. PUPs should be accessible to all evacuees.

I.E.5. It is critical that modes of available transportation are identified that can accommodate people with disabilities and others with access and functional needs during an evacuation. Transportation that can accommodate people in wheelchairs, scooters, or other mobility aids must be made available. Some potential options can be the use of lift-equipped school buses and vans.

I.E.6. Planners should consider adding designations to locations identified as possible PUPs that could include temporary signs, permanent additions to existing signs, or some other indication that it will serve as a PUP.

I.F. Evacuation Points

I.F.1. Transportation coordinators and local jurisdictions should work with county and state emergency management agencies to identify and establish evacuation points (EPs) in the event of a catastrophic incident.

I.F.2. EPs should be established outside of threatened areas for the triage of evacuees and distribution to appropriate care facilities.

I.F.3. The number and location of EPs should be based on the population that will need transportation. EPs should be at easily identifiable locations and accessible to all evacuees.

I.F.4. Municipalities may want to consider senior centers for use as EPs, as these facilities are geographically dispersed, ADA-compliant, include many infrastructure support resources (e.g., water, bathrooms, backup power), and are familiar to senior citizens.

I.F.5. Where available, local rail authorities should attempt to incorporate rail into the evacuation plans in order to move large segments of the population from and within the affected area, as necessary.

I.F.6. Well-known sites (e.g. schools, shopping centers, and libraries) should also be considered as possible EPs.

   a) A facility considered for use as an EP should contain overhead cover and restrooms that are capable of supporting large segments of the population for extended periods of time.

   b) If schools are currently in session, their use should be coordinated with the appropriate school district before they are used.

I.G. Regional Hub Reception Centers

I.G.1. An regional hub reception center (RHRC) is an interim site along an evacuation route for people who have been provided transportation assistance.

I.G.2. This site may include services such as evacuee tracking, canteen or feeding, household pet reception, basic medical assessment, evacuee communications, and determination of shelter location to which the evacuees will be sent.
I.G.3. This site may be used when assessments and evacuee processing could not be accomplished or completed prior to embarkation, or if reassessment or processing is necessary prior to arrival at shelter locations.

I.H. Evacuee Manifesting and Tracking Process

For government-assisted evacuations, planners should employ systems like the Federal Emergency Management Agency (FEMA) sponsored National Mass Evacuation Tracking System (NMETS) where technologically possible or collect basic information, including:

I.H.1. Geographic location from which evacuees came
I.H.2. Number of adults
I.H.3. Number of children
I.H.4. Number of people with disabilities and others with access and functional needs, including:
   a) Whether they have a guardian or caretaker present
   b) Unaccompanied minors, any durable medical equipment (DME), and service animals

I.I. Transportation Coordination

Staging areas will be established to stage and coordinate transportation resources in support of PUP operations. This will provide the EOC the ability to coordinate these resources effectively.

---

2 Several software packages have been developed specifically to track people displaced in a disaster and have been used successfully for several large-scale disasters.
The appropriate EOC or incident commander will be responsible for coordinating these resources with local transit agencies. It is important that control over transportation resources be maintained by the appropriate transit agency to facilitate continued service in support of evacuation plans and response goals.

I.I.1. Special consideration must be taken where local bus fleets consist predominantly of compressed natural gas (CNG) powered buses, which are required to refuel at specific sites and have limited range. Local transit agencies may need to provide support services to the evacuation bus fleet, including refueling and quick turnaround maintenance to enhance evacuation capabilities.

I.I.2. Law enforcement escorts may be required to provide security in support of transportation resources, where necessary.

   a) Due to limited resources, law enforcement escorts may not always be possible. In the event that law enforcement vehicles (i.e. motor units) are used, communications should be established and maintained with the escort group via radio.

   b) Escorts can also coordinate real-time information on traffic and road conditions, EPs and PUPs, and other critical information. Information obtained should be relayed via the escort group to the EOC for analysis and dissemination, as necessary.

I.I.3. Overall evacuation routes must be coordinated across jurisdictional boundaries and may require sustained inter-jurisdictional coordination between evacuated and host communities along or near the evacuation routes. See WisDOT Evacuation Route and Traffic Control Guidance.

I.J. Evacuation Route Determination

The WisDOT Evacuation Route and Traffic Control Guidance is the primary authority in Wisconsin for evacuation route determination.

I.J.1. Evacuation routes and capacities

   a) Primary evacuation routes consist of the major interstates, highways, and prime arterials. Local jurisdictions work primarily with their county EOCs, law enforcement officials, WisDOT, Wisconsin State Patrol (WSP), local transit agencies, and other applicable agencies or departments to identify EPs and transportation routes. In addition, local jurisdictions should coordinate with EOCs for RHRCs and shelter locations.

   b) It will be necessary to identify EPs before evacuation routes are announced to the public. Evacuation routes should be determined based on the location and extent of the incident and should include as many pre-designated transportation routes as possible. Important roadway characteristics and factors that should be considered when selecting an evacuation route include:

      (1) Shortest route to the designated destination areas;

      (2) Ability of proposed routes to accommodate the mode of transportation to be used;

      (3) Maximum roadway capacity;

      (4) Ability to increase capacity and traffic flow using traffic control strategies;

      (5) Maximum number of lanes that provide continuous flow through the evacuation area;
I. Transportaton Strategies

There are many transportaton strategies available that can be implemented during an evacuation effort to enhance traffic flow and reduce the overall evacuation time. These strategies include contra-flow, traffic signal coordination, closure of on- and off-ramps, intelligent transportaton systems (ITS), segregation of pedestrian and vehicle traffic, exclusive bus routes, phased evacuation, phased release of parking facilities, use of designated markings, and road barriers.

I.K.1. Contra-flow operations

a) Contra-flow is a tactic in which one or more lanes of a roadway are reversed to allow for an increase of traffic flow in one direction. Contra-flow can be implemented for highway and arterial roadways. However, the non-signalized, divided, and access-controlled configurations of highways make these roadways ideal for contra-flow operations.

---

3 NOTE: WisDOT does not include contra-flow traffic as a viable strategy in its Evacuation Route and Traffic Control Guidance and discourages local entities from using contra-flow concepts during mass evacuation operations. However, local entities may find contra-flow traffic a necessity and therefore it is included in this annex as a transportation strategy.
b) An important consideration in the development of contra-flow plans is the identification of inception and termination points for the corridor. Congestion at these points can significantly reduce the effectiveness of these operations.

c) Effective implementation of these plans includes the deployment of appropriate signage, signals, and barriers as well as the use of WSP and other law enforcement personnel.

d) For safety considerations, contra-flow operations should only be performed during daylight hours. In addition, an emergency return lane must also be designated.

e) Since mass evacuations in Wisconsin will likely be limited or no-notice in nature, it is highly unlikely that jurisdictions will employ contra-flow strategies given the transportation complexity and level of resources required to implement this strategy. However, if contra-flow operations were to be used in Wisconsin in an evacuation effort, it will be implemented for only small segments of roadways.

f) Each jurisdiction has the option to use contra-flow on their local roadways. However, the use of contra-flow on highways requires extensive cross-jurisdictional coordination.

I.K.2. Traffic signal coordination and timing

a) Traffic signal coordination and timing plans should be synchronized to maximize traffic flow in the outbound direction during an evacuation effort. Depending on the extent of the evacuation, coordination may be necessary both locally and regionally to calibrate traffic signal systems.

b) In addition, it is important to identify the number of non-programmed signals along evacuation routes. These signals can be plugged into non-centrally programmed traffic signal boxes, which will then generate flashing yellow and red lights to help manage traffic.

c) Individual jurisdictions should determine whether local traffic signals can be controlled from a central location as well as the availability and capability of backup power sources.

I.K.3. Closure of freeway on-ramps and off-ramps

a) Closure of outbound freeway on-ramps on designated evacuation routes will reduce congestion on these roadways resulting from traffic originating at intermediate locations between evacuation origins and destinations.

b) In addition to reducing congestion, closure of freeway outbound on-ramps will also help eliminate entrance queuing.

c) Closure of freeway off-ramps will ensure that evacuees remain on designated evacuation routes.

d) These tactics will require coordination between WSP, WisDOT, local jurisdictions, and other emergency personnel to place and staff necessary barricades throughout the evacuation route.

I.K.4. Intelligent transportation systems

a) Intelligent transportation systems (ITSs) include a broad range of technologically-based tools that enable transportation and emergency managers to monitor traffic conditions, respond to capacity-reducing incidents, and provide real-time road conditions.
b) Numerous forms of ITS technologies exist including:

(1) Roadway electronic surveillance
(2) Automatic vehicle location
(3) CMSs
(4) Highway advisory radio

c) These types of technologies provide real-time information to the STOC.

I.K.5. Segregation of pedestrian and vehicle traffic

a) This strategy will designate certain urban roadways as pedestrian only. This will provide separation between vehicles and pedestrians during an evacuation, thus reducing confusion and increasing the efficiency and safety of the evacuation.

b) Some short-notice incidents would involve an immediate evacuation on foot versus by vehicle.

c) Resources required to successfully implement vehicle and pedestrian separation on evacuation routes will include appropriate accessibility, signage, signals, barriers, and the deployment of emergency management personnel and communications equipment.

I.K.6. Exclusive bus routes

a) This strategy involves the designation of certain lanes within an evacuation route exclusively for buses or high-occupancy or large-capacity vehicles.

b) Exclusive bus routes may also be established along alternative evacuation routes.

c) The implementation of this strategy will help support and expedite pick-up point and evacuation point operations and can greatly increase the number of people that can be evacuated within a timeframe.

d) This strategy will require coordination between the state, county, or tribal EOCs, local transit agencies, affected local jurisdictions, law enforcement agencies, and WisDOT.

I.K.7. Use of designated markings

a) Designated markings and signs will play a key role in accomplishing a safe and efficient evacuation.

b) Signs, flags, and other markings can be used to provide guidance and information to evacuees en route.

I.K.8. Road barriers

Road barriers can be used in conjunction with other transportation strategies to ensure that evacuees remain on designated evacuation routes or are blocked from entering closed areas.

I.K.9. Vehicle support services

Local governments provide or have contracts to provide freeway patrol services, which can be activated and used during an evacuation effort to provide services (e.g. changing tires, jump-starting vehicles, providing fuel, or towing vehicles) to disabled vehicles.
II. Evacuation via Motor Vehicle

II.A. Planning Considerations for Use of Motor Vehicles

II.A.1. Damage to the infrastructure may prevent motor vehicles from traveling on the highway system or roadways.

II.A.2. Debris may make roadways impassable or cause threats to safety due to materials such as nails, glass, or other debris that negatively affects vehicle tires and driving.

II.A.3. Following a significant high-yield explosive incident, roads and bridges in the immediate blast area will likely require inspection. This could slow the traffic and evacuation process for motor vehicles.

II.A.4. If the electricity is out, traffic signals will not be working which would slow the motor vehicle evacuation process.

II.A.5. In the event of flooding, motor vehicles will not be able to pass through low-lying areas.

II.A.6. If there is damage to gas pipelines, vehicles may not be able to get fuel.

II.A.7. If there is no electricity and no backup generator, fuel will not be able to be pumped nor will electric vehicles be able to re-charge.

II.A.8. Bus facilities may be affected.

II.A.9. Schedules will have to be maintained for continuing preventative maintenance on vehicles.

II.A.10. If communications are not already available onboard the motor vehicle, some mode of communication will have to be identified and the operators will have to be trained to use it.

II.A.11. Communications networks for gas stations may be down and pay-at-the-pump and credit or debit transactions may be unavailable. The stations may only be able to accept cash.

II.A.12. When planning for para-transit vehicles and taxis, consider that the space limitations inside those vehicles may mean that families become separated. If this is the case, family reunification will be an issue.

II.A.13. Proper record keeping is an absolute necessity to ensure that private companies and nonprofits are reimbursed for expenses they incur. It is also important that they be monitored to ensure that they are reporting correctly to avoid fraud and abuse.

II.A.14. Agreements need to be developed regarding reimbursement for the use of private transportation personnel and resources, as well as associated damages from operations.

II.A.15. Appropriate safety regulations must be maintained for all vehicles obtained to assist with government-assisted evacuations.

II.B. Government-Assisted Motor Vehicle Transportation Resources

II.B.1. Local transit agencies
Transit agencies are key stakeholders in evacuation transportation. Planners should work with the local transit agency to determine the number of resources, their capabilities, and fuel requirements.

a) Advantages include the following:

(1) Buses are readily available and have great mobility.
(2) Buses have a relatively quick response time.
(3) Buses are familiar to the public.

b) Limitations include the following:

(1) Buses typically have only two wheelchair securement locations for people who use wheelchairs and mobility devices.
(2) Some might be powered by CNG only and thus be limited to fixed refueling locations.
(3) Buses may be limited in range.
(4) Drivers capable of effectively operating the buses may be in short supply.

Bus fleets are often comprised of 40-foot, 45-foot, and 60-foot buses that operate on CNG, gasoline, or diesel, depending on the fleet.

(1) Buses traditionally have a capacity of 40 to 45 people.
(2) Buses can usually accommodate two wheelchairs and majorities of the buses are lift-equipped.

II.B.2. School district buses

a) Planners should work with local school districts to determine if school buses are owned and operated by the district or are leased or contracted with a private vendor.

b) School bus advantages include the following:

(1) Buses are readily available and have great mobility.
(2) They have a relatively quick response time.

Limitations include the following:

(1) Buses have limited space for people in wheelchairs and mobility devices.
(2) Buses that use CNG instead of diesel are limited to fixed refueling points.
(3) Buses may be limited in range.
(4) During the school year, buses will already be tasked with a dedicated route.
(5) During the summer and holidays, it may be harder to find and recall bus drivers.
(6) Buses have no personal belonging storage thus reducing passenger capacity

d) School buses traditionally have a capacity of 40 to 70 people per bus under normal operations.

e) Each school bus can typically accommodate two wheelchairs.

II.B.3. Para-transit services

a) Advantages include:
Para-transit services often have relationships with current riders.

Resources are accessible by a wide variety of mobility devices.

b) Limitations include:

1. Vehicles have limited space for passengers, often having small capacities of only 4 to 11 passengers.

2. Some vehicles may not be able to accommodate mobility devices larger than the Federal requirement of 30 inches wide, 48 inches long, and 600 pounds in total weight (rider and mobility device combined). Planners should consult with the services to determine their level of capability.

3. Para-transit services are dedicated resources for existing clients. Planners must coordinate with these resource providers to consider the impact on existing clients and a contingency plan for those who are en route to a destination or expecting to be picked up.

II.B.4. Intercity motor coach or charter buses

a) Advantages include the following:

1. Some buses are lift-equipped and wheelchair-accessible.

2. There is an abundant supply of these buses in Wisconsin’s larger population areas.

b) Limitations include the following:

1. Some have scheduled routes, assignments, or other priorities and may not be available for service.

2. There is limited space for people with wheelchairs or mobility devices.

3. There may be legal restrictions on the areas they can access.

c) Motor coaches traditionally have a capacity of 35 to 57 people.

II.B.5. Taxis

a) Advantages include the following:

1. A limited supply of taxis exists in Wisconsin’s larger population areas.

2. Taxi services are licensed through local regulatory jurisdictions. Planners should work with local agencies to determine regulatory requirements, or with neighboring jurisdictions to determine standards and available resources.

b) Limitations include the following:

1. There is a public perception that passengers will have to pay for the service.

2. Price gouging (or the perception of price gouging) may limit some residents from using this service.

3. There is limited space for passengers.

4. Most taxis are not wheelchair-accessible.

5. Taxis can cause congestion on roads.

6. Due to the number of taxis available to the area, it may be difficult to coordinate this resource.
c) Taxis usually have a capacity of between two and seven passengers per vehicle.

II.B.6. Buses and vans of churches, non-governmental organizations (NGOs), and private schools

a) Advantages include the following:
   (1) Some individuals in the target evacuation population will already have a relationship with the churches, NGOs, and private schools.
   (2) These buses and vans are already embedded in the community.

b) Limitations include the following:
   (1) These resources and organizations may be unfamiliar to some citizens.
   (2) The buses and vans may already be committed to another route or assignment.
   (3) During holiday times, it may be harder to recall drivers.
   (4) Pets may not be welcome on the buses and vans.
   (5) There should be appropriate agreements and record keeping ensuring that the groups are able to receive reimbursement for expenses, including damages, drivers’ salaries, and fuel.

c) Churches, NGOs, and private schools will own a wide variety of motor vehicle transportation assets. These will range from vans and shuttles to larger buses.

II.B.7. Private shuttle services

a) These services often are provided by larger employers, amusement parks, and other tourist facilities, among others.

b) Advantages include the following:
   (1) Buses and vans are readily available and have great mobility.
   (2) Buses and vans have a relatively quick response time.

c) Limitations include the following:
   (1) Buses and vans have limited space for people with wheelchairs or other mobility devices.
   (2) Operators may encounter physical and legal barriers. Legal barriers could include limited insurance coverage for specific passengers or geographic restraints.
   (3) Operators may already have a fixed route and not be available to assist.
   (4) Shuttle buses and vans usually have a capacity of 4 to 40 people.

II.B.8. Law enforcement transportation resources

a) An advantage is that during a disaster, these resources and their drivers may be available.

b) Limitations include the following:
   (1) There is a public stigma or perception against transporting “free” citizens in a corrections vehicle.
   (2) These resources may already be committed to transporting or evacuating inmates.

II.B.9. Car pool vans
a) Advantages include the following:

1. These vans are already out in the community.
2. Vans are well marked.

b) A limitation is that these vans are assigned to particular vanpools so in a disaster these vans may already be tasked with other missions.

III. Evacuation via Rail Transport

While rail evacuation is limited by track service area, right of way, and limited boarding platforms, the access constraints are offset by the potentially large numbers of passengers that are able to be moved and the ability to transport people with disabilities and others with access and functional needs. However, since few Wisconsin population centers are serviced by passenger rail service and because rail evacuation using freight lines requires lead-time for execution, evacuation via rail is not considered a significant mode of evacuation in Wisconsin but it cannot be entirely dismissed.

III.A. Amtrak

Amtrak operates two passenger train routes in Wisconsin: the long-distance Empire Builder operating from Chicago to Seattle and Portland, with one round-trip daily and six Wisconsin stops (Milwaukee, Columbus, Portage, WI Dells, Tomah, and La Crosse); and the Hiawatha Service that carried more than 830,000 passengers in 2012 on seven daily round-trips between Chicago-Milwaukee.

III.A.1. Capacity, range, and cycle time

a) Passenger rail cars come in varying configurations.

b) Lounge cars seat between 31 and 53 passengers, while older, single-level cars have either 60 or 84 seats.

c) Double-deck superliner cars have 12 seats in the lower level and 62 in the upper level.

d) The range is up to 900 miles per fuel load.

e) Passenger loading and unloading time is approximately 10 to 20 minutes.

f) Cycle time is minimal from arrival at the evacuation boarding point to the departure.

III.A.2. Accessibility for people with disabilities and others with access and functional needs

a) Room is available for attendees, service animals, and mobility equipment.

b) The lower-level superliner coaches are accessible to individuals with access and functional needs.

c) All restrooms are accessible.

III.A.3. Considerations

a) Inter-city rail transport has been effectively employed in past disasters due to its ability to transport large numbers of evacuees in a single trip.

b) Most passenger cars are equipped with a restroom, and a number of cars are configured for food and water services.
c) Infrastructure (e.g. tracks, power source, and control devices) may be damaged by the incident and may require specialized operators.

d) The locomotives require large amounts of fuel (2,500 gallons per locomotive) and have generally less passenger room than urban or light-rail services.

e) Onboard security will be required.

f) Amtrak provides shuttle services between certain locations to nearby train stations. Planners should consult with Amtrak to determine if this exists in their jurisdictions and its use during emergency operations.

g) Employment of inter-city rail services will require considerable pre-incident planning with memoranda of understanding (MOUs) in place to facilitate their mobilization.

III.B. Freight Lines

Freight railroads provide key transportation services to manufacturers and other industrial firms. Twelve freight railroads in Wisconsin operate on a system of approximately 3,600 route miles.

IV. Evacuation via Marine Transport

IV.A. Overarching Considerations

IV.A.1. While all water-borne transport is limited by ports, rivers, and canals with the ability to properly dock and load, these constraints are offset by the ability to transport large numbers of passengers, including people with disabilities and others with access and functional needs.

IV.A.2. Marine facilities may be isolated from damaging incidents that occur inland or they may be the focal point of major damage due to an earthquake.

IV.A.3. Marine assets offer the ability to assemble a large number of evacuees in a secure environment.

IV.A.4. Mobilization time will vary greatly. While all private operations will require MOUs and pre-incident planning, the larger the ship and crew, the greater amount of preparation and mobilization time is required.

IV.B. Ferry

IV.B.1. A limited supply of ferries exists in Wisconsin on Lake Michigan, Lake Superior, and on the Mississippi River. Capacity, range, and cycle time vary significantly, thus planners are encouraged to obtain detailed information from ferry operators in their respective areas of responsibility.

IV.B.2. Accessibility for people with disabilities and others with access and functional needs

a) Ferries generally have space and access facilities for mobility devices and the ability to configure space for people with disabilities and others with access and functional needs.

IV.B.3. Considerations

a) Ferries have been successfully employed in several major disasters nationwide.
b) Given their flexibility and size, ferries will move large passenger loads efficiently for extended time periods.

c) A large number of passengers may be assembled in the docking area within a secure environment.

d) Passengers may be transported via ferry to a shelter area or other means of transportation outside of the disaster impact zone.

e) Ferries require no special fuel.

f) With a qualified crew of three to five people, ferries are virtually self-sufficient.

g) Ferries require a dock area of sufficient draft and boarding capability and a security presence at the dock and onboard.

h) Most ferryboats are equipped with accessible restrooms.

IV.B.4. Availability

a) Planners with access to water evacuation resources should consult with local port operations or the Coast Guard to determine availability and resources within the jurisdiction.

IV.C. Recreational Boats and Excursion or Tour Boats

IV.C.1. Personally-owned recreational boats as well as business-owned excursion and tour boats are prolific in Wisconsin. Capacities, ranges, and cycle times vary greatly by type of boat.

IV.C.2. Accessibility for people with disabilities and others with access and functional needs include:

a) Excursion or tour boats likely have designated access and functional needs areas and the potential for apportioned deck space.

b) However, recreational boats, unless specially configured, likely do not have such accessibility.

IV.C.3. Considerations

a) Excursion or tour boats are able to store and serve food and water.

b) A large number of passengers may be assembled in the docking area within a secure environment.

c) Passengers may be transported to shelter areas or to other means of transportation within a safe and secure area.

d) Excursion or tour boats and recreational boats require no special fuel.

e) With a crew of three to five people, excursion or tour boats are virtually self-sufficient.

f) They may require a suitable docking structure to load and unload passengers.

g) Recreational boats are in abundant supply but integrating their owners into evacuation plans prior to an incident occurring is difficult.

h) Recreational boats are highly maneuverable and capable of accessing confined spaces with low water drafts.

IV.C.4. Availability
V. Evacuation via Air Transport

Air evacuation involves coordination among multiple agencies, including federal, state, tribal, and local partners, as well as private-sector air operators.

V.A. Planning considerations

V.A.1. These resources can travel long ranges. They cover great distances in a short amount of time.

V.A.2. They require runways, dedicated crews, specialized fuel, and support.

V.A.3. Other required support includes ground security; shelter; water and restrooms for waiting evacuees; boarding security and passenger manifesting; communications and air traffic control systems; and sufficient supply of proper types of fuel.

V.A.4. In a catastrophic disaster, the aviation system may be damaged or disrupted. This may include physical damage to runways, taxiways, and ramps, or to the support infrastructure.

V.A.5. Careful planning and execution is needed to ensure that the complex aviation operation system is fully functional. This includes damage assessments, immediate repairs, and the restoration of navigation services, airspace, air traffic control operations, emergency power, and lighting.

V.A.6. Evacuation via air transport should not be considered unless ordered to do so.

V.A.7. Air evacuation would normally be a federal and state-coordinated effort. A local jurisdiction's responsibilities will focus on arrangements to shuttle evacuees to the airport.

V.A.8. Flow of evacuees must be closely coordinated with the aviation planning section of the incident command to ensure the safe and smooth flow of air assets in to and out of evacuation hubs.

V.A.9. While the air evacuation is the most expensive cost per passenger method of emergency evacuation, it offers the ability to rapidly relocate a given population of up to 300 evacuees a substantial distance.

V.A.10. This may be appropriate in the relocation of populations to an area of appropriate care and shelter.

V.B. Accessibility for People with Disabilities and Others with Access and Functional Needs

V.B.1. In proper configuration, specialized aircraft can transport relatively large numbers of non-ambulatory individuals.

V.B.2. Mechanized lift platforms are required for civilian aircraft and, unless the unit is a specialized plane, seating is limited for people with disabilities and others with access and functional needs.
V.B.3. Military aircraft will have full dropdown ramp access and may be configured to be accessible.

V.C. Availability

V.C.1. All of Wisconsin’s major population centers have transport-capable airfields with the majority serviced by commercial passenger aircraft service.

V.C.2. A wide range of aircraft may be available from these airports. Incident-specific availability will depend on the amount and degree of damage to airfield facilities and the level and detail of pre-incident planning and agreements.

V.C.3. In addition to the civilian and military operators, a number of federal agencies operate aerial assets that are suitable for mass evacuation.

VI. Building Relationships with Transportation Partners

VI.A. Identifying Transportation Resources

VI.A.1. Identifying and fostering relationships with the myriad of transportation resources in Wisconsin is essential to effective evacuation. It is recommended that jurisdictions develop relationships with transportation agencies, service providers, and operators within the community whose resources may be needed during an evacuation.

VI.A.2. There are numerous transit service providers in Wisconsin’s major population centers as well as hidden fleets that may be needed in case of evacuation. There are also transportation service providers that will be crucial in the movement of individuals from hospitals and care facilities.

VI.A.3. An inventory of transportation assets should be developed that includes:
   a) Fleet size
   b) Types of vehicles
   c) Vehicle capacities
   d) Number of wheelchair securement locations on vehicles
   e) Fuel type and range
   f) Vehicle fueling locations
   g) Turning radius
   h) Vehicle storage or layover locations

VI.A.4. It is recommended that jurisdictions identify the number of people who may be in need of evacuation transportation, and map those populations in relation to transportation assets, evacuation routes, and reception centers or shelters.

VI.A.5. Local jurisdictions should seek to establish and maintain working relationships with advocacy and faith-based groups that serve the transportation-dependent members of their community.
VI.B. Public Education

Emergency managers should prepare the public in advance for the potential of evacuations. Federal Highway Administration (FHWA) has identified the following pieces of critical information that are key to effective public communication:

VI.B.1. What preparations to carry out in advance (e.g. emergency ready kits and family evacuation plans)

VI.B.2. How an evacuation will be declared and the meaning of different types of evacuation orders

VI.B.3. What support services are likely to be offered to evacuees

VI.B.4. Where to get information once an evacuation is ordered

VI.B.5. Where and how to get updated information once an evacuation is underway

Intentionally left blank
I. Purpose

The purpose of the re-entry procedures guidance is to assist local and state agencies in developing a coordinated, safe, and orderly re-entry into the impacted communities following a catastrophic incident. Re-entry planning will assist in a more orderly and efficient re-entry process.

II. Re-Entry Considerations

Several factors should be considered during the re-entry process. Communication is the key to avoiding and reducing the risk of possible injury or loss of life. All stakeholders should meet and confer regarding the re-entry process to insure a safe, controlled plan execution. The incident commander (IC) should make the re-entry determination based on a thorough area assessment to ensure that the affected area is safe for both the emergency responders and the public. The following is a list of possible considerations:

II.A. Safety

A.1. First responders and emergency workers supporting evacuee re-entry should be equipped with the proper equipment (e.g. barricades, flares, signs, food, water, and bathrooms).

A.2. Checkpoints should be identified, set up, staffed, and demobilized.

A.3. Structures in the area should be assessed and tagged (e.g. habitable or condemned).

A.4. Dangerous debris should be removed from access routes and public areas.

II.B. Security

B.1. Sufficient security personnel should be made available and supporting operational plans should be implemented.

B.2. An adequate number of traffic control personnel should be available and the support of operational plans should be implemented.

B.3. Adequate assessments of known or likely criminal/gang activity should be considered.

B.4. An established credentialing process should be implemented and its requirements disseminated to all parties involved.

B.5. Planners should implement procedures for handling stray and wild animals that re-entering people might encounter.

II.C. Damage assessment

C.1. Sources of aerial photos or surveys of the impacted area to assess re-entry decisions should be identified.

C.2. Public works and necessary infrastructure repairs should be completed.
II.D. Restoration of services

D.1. Service of required infrastructure should be restored (e.g. gas, electric, water, or sewer) and the appropriate companies should have conducted and completed site surveys. The area should first be rendered and identified as safe for re-entry.

D.2. Appropriate health and safety services and first-responder disciplines should be functional (e.g. working hospitals, emergency medical technicians, and fire personnel).

D.3. A timeline for repairing non-essential infrastructure should be developed.

II.E. Recovery of decedents

E.1. Local coroners must develop plans to remove, store, and track decedents.

E.2. Mental health or grief counselors should be available for support to the population and responders in the affected area.

E.3. Local health authorities should consider health implications of decomposing human remains and incorporate precautions to safeguard health of recovery personnel accordingly.

II.F. Site safety assessment

F.1. A re-entry coordinator has been designated.

F.2. The re-entry area has been divided into workable grids.

F.3. Ingress and egress routes have been established.

III. Re-Entry Process

The re-entry process should engage multi-jurisdictional entities and disciplines, including local fire departments, emergency medical services; health services; public health; law enforcement; housing departments and building and safety agencies; city, county, regional, state, and federal agencies; faith-based, community-based, and nonprofit organizations; and the private sector. These agencies should provide a task list of responsibilities for re-entry based on the type of incident that forced the evacuation.

For catastrophic incidents that require mass evacuation, re-entry will generally take place in stages over the course of a few weeks. Some people may return immediately, others in a few days, and others weeks or months later. Re-entry may be lengthened and complicated by the fact that many residents will have decided to stay with relatives and friends in non-affected areas rather than stay at evacuation shelters. If the evacuation operation is so large that several shelters are activated, the resulting re-entry traffic control operation may also prove to be time-consuming.

III.A. Coordination

Coordination across jurisdictions is critical for effective re-entry operations.

A.1. Re-entry coordinator

   a) When re-entry operations are being considered, ICs should consider designating a re-entry coordinator.
b) The re-entry coordinator is responsible for coordinating re-entry procedures with all involved agencies and ensuring effective communication.

III.B. Planning

B.1. Planning staff

The planning staff for the re-entry phase should consider the population that will return. The evacuated area can be divided into sections or grids, which may be the best way to facilitate an orderly re-entry.

B.2. Ingress and egress

Ingress and egress routes will need to be identified and manned. Traffic control devices (e.g. barricades, flares, or portable signals) may be needed to accommodate the influx of vehicular traffic.

B.3. IC contingencies

Other contingencies that are deemed necessary by the IC will have to be planned before a re-entry is announced.

B.4. Safety equipment

All responders, regardless of origin, should be equipped with appropriate safety equipment to assist with duty performance.

B.5. Law enforcement

Law enforcement personnel should be assigned, planned for, and coordinated during the re-entry phase.

B.6. Aerial survey

Following a major incident, an aerial survey of the impacted area should be conducted immediately to identify and prioritize the most seriously damaged areas, with a follow-up reconnaissance of ingress routes and subsequent hazards, such as downed power lines, that could impede returning evacuees.

B.7. Utilities

Public and private utility companies should coordinate with the local public works department to identify and remove downed utility lines. See Catastrophic Incident Annex, Attachment 4.

B.8. Clearing teams

Clearing teams can be used immediately after the incident. A clearing team should begin the process of clearing access to critical facilities and roads to facilitate the re-entry process. Re-entry clearing teams should not be comprised of search and rescue (SAR) personnel and are only tasked with opening roads for SAR teams and damage assessment teams to gain access to areas of destruction.

B.9. Critical infrastructure and key resources (CIKR)

CIKRs (e.g., hospitals, fire stations) should be re-established and returned to a functional state prior to re-entry, since returning evacuees may need to rely on these agencies for the protection, health, and welfare of the a recovering community.
III.C. Site Safety Assessments

The impacted areas must be thoroughly investigated to ensure the safety of residents as they return to their homes and that normal operations have been restored. This assessment should include verification that:

C.1. Buildings, bridges, and roadways are considered and deemed safe and other potential hazards, including unsafe trees and potential landslides, have been eliminated
C.2. A safety assessment has been completed
C.3. There are no leaking or ruptured gas lines or downed power lines
C.4. Water and sewer lines have been repaired
C.5. SAR operations have been completed
C.6. There are no hazardous materials that can threaten public safety or appropriate warnings have been issued
C.7. Water has been deemed safe or appropriate warnings have been issued
C.8. Major transportation routes are passable and debris has been removed from public right-of-ways
C.9. There is no threat to public safety and other significant hazards have been eliminated

III.D. Phased Re-Entry

Re-entry can proceed as recommended based on a phased re-entry. This can limit primary access to essential personnel and help to manage the number of people entering the disaster area.

D.1. Phase I

This phase allows the re-entry of agencies and groups that play key roles in restoring normal operations in the impacted area following a disaster. Phase I agencies and groups may include:

a) Law enforcement and security agencies (including private security for facilities and residential communities)

b) Urban search and rescue teams
c) Facility or industry emergency response teams
d) Debris-clearing and debris-removal crews
e) Infrastructure and utilities repair personnel
f) Official damage assessment teams, and
g) Other personnel at the direction of the emergency operating center (EOC)

D.2. Phase II

This phase allows for the limited re-entry of other critical groups, as well as residents and business owners. The local EOC in coordination with public safety personnel should determine when it is safe to begin Phase II entry. These groups may include:

a) Relief workers
b) Commodities points of distribution teams

c) Health and human services

d) Insurance agents

e) Management and staff for key retail stores that can assist with recovery efforts (home improvement stores, hardware stores, etc.), and

f) Hotel or motel staff (to prepare for the receiving of state and federal relief agencies)

D.3. Phase III

This phase allows for the limited re-entry of only those residents who can prove they live, own, rent, lease, or otherwise need access into the restricted areas.

a) If the impacted area cannot support the return of evacuated residents, temporary housing may be established in non-impacted areas near the disaster area.

b) State, county, tribal, and city authorities, in accordance with state, tribal, and local emergency plans and procedures, will make decisions and coordinate the location and operation of temporary housing facilities.

III.E. Checkpoints and Routes

E.1. Evacuees will return to the area following primary and secondary evacuation routes.

a) Pre-established traffic control points and credentialing should be considered to verify residents or workers who have a need to re-enter a restricted area.

b) Personnel with law enforcement authority are responsible for establishing and staffing access and checkpoints for re-entry into their locality.

E.2. The public should be notified of the re-entry status through emergency broadcast radio, television, press releases, the Internet, informational phone lines (e.g. 2-1-1), community briefings, and informational updates at shelters.

E.3. Once evacuees are permitted to return, it is important that procedures be established to properly identify residents and critical support personnel, as well as ensure the legitimacy of contractors, insurance adjustors, and other personnel. Personnel with law enforcement authority should staff re-entry points.

E.4. Coordination of transportation resources is necessary to effectively return evacuees that require transportation assistance from evacuation points or shelters back to their communities. The local EOC, public works, and law enforcement should coordinate and establish traffic management plans for the return of evacuees, which must include the identification of preferred travel routes.

E.5. No one can legally stop someone from leaving a shelter. However, when people leave the shelters and return to their homes, there is a potential that people with disabilities and others with access and functional needs may not be able to enter their homes, especially if required ramps or other means of access have been destroyed.

a) Due to these considerations, short-term housing should be identified that can accommodate those individuals that need additional assistance.

b) Potential sites could be hotels, motels, apartment buildings, or portable trailers with ramps. It is also important that these temporary housing sites are located in proximity to necessary support networks.
c) Relief agencies (e.g. the American Red Cross and public health departments) also need to work closely with residents to provide accessible information material and assistance.

E.6. Each local EOC will be responsible for making the determination that re-entry has been completed for its jurisdiction. Sharing this re-entry completion information among affected jurisdictions and the SEOC is recommended.

III.F. Identification Procedures/Credentialing

F.1. Identification procedures are intended to provide guidance for law enforcement personnel who may be directing access to disaster-impacted localities.

F.2. Residents should have proper identification, such as a driver's license, utility bills, proper tax receipts, or a document that proves they reside within the affected area. If, however, residents are unable to produce identification, a procedure should be established to assist returning evacuees whose identification may have been destroyed, lost, or stolen during the evacuation.

F.3. Relief workers and business owners should have a company identification card.
Suggested Items to Take During an Evacuation

# Table of Contents

I. Overview ........................................................................................................................................... 4  
   I.A. Considerations ............................................................................................................................... 4  
II. Evacuation Kits .................................................................................................................................. 5  
   II.A. Situational Kits ............................................................................................................................... 5  
   II.B. Suggested Items ............................................................................................................................... 5
I. Overview

It is important for individuals, families, and whole communities to prepare for possible disasters and other emergencies.

I.A. Considerations

I.A.1. Disaster can strike suddenly and those who take responsibility for their own safety will reduce the burden on themselves and first responders.

a) Do not rely on one person to provide assistance in an emergency.

b) Build a support team that includes several people.

c) People possessing written emergency health information enables rescuers and others to access information about individuals who may be unable to communicate this information should include:

(1) Medications
(2) Allergies
(3) Equipment (e.g., model and serial numbers of hearing aids, pacemakers, communication devices, wheelchairs, and batteries)
(4) Communication limitations
(5) Current treatments
(6) Medical providers
(7) Important contact people.

I.A.2. A checklist\(^1\) of items that can be kept in an easy-to-carry emergency preparedness kit can be found on Ready.gov.

a) ReadyWisconsin and many local public relations campaigns offer similar guidance to address the needs of the population and the hazards for which to prepare.

I.A.3. Clear direction and information should be made available and coordinated with local media, nongovernmental organization public affairs, and elected officials when communicating with the public about the conditions, space restrictions, and expectations of the evacuation process.

a) Evacuees and response personnel receiving evacuees should have clear instructions about what should be brought or not brought and how these resources will be handled.

b) Planners should remember that resources brought with evacuees might have to be left at pick-up points (PUPs) if space is not available.

\(^1\) For more information on suggested items to consider for evacuation, visit http://www.ready.gov/. Also see http://www.ready.gov/build-a-kit.
Planners should consider how to handle bulky items, valuables, personal firearms, durable medical equipment, infant and child supplies (e.g., toys, special food, sanitation items), luggage, and pet supplies.

II. Evacuation Kits

II.A. Situational Kits
Evacuation kits can be prepared for different places and situations such as:

II.A.1. A carry-on or fanny pack kit for only the most essential items.
II.A.2. A grab-and-go kit if someone needs to leave home in a hurry.
II.A.3. A home kit with all that someone needs to be self-sufficient for days at home or at an evacuation point (EP).
II.A.4. A bedside kit for use if someone is trapped in or near their bed and unable to move about their home.

II.B. Suggested Items
The following is a list of information that evacuees should have ready and with them when they evacuate.

II.B.1. Identification
a) Identification cards that can be pinned to clothing or hung around the neck at the time of evacuation.
b) People with disabilities and others with access and functional needs should carry identification cards containing the following:
   (1) Personal information, such as name and address.
   (2) Emergency contact information.
   (3) Specific medical needs.
   (4) Required medication.

II.B.2. Water
At least a three to seven-day supply of one gallon of water per person per day

II.B.3. Food
Nonperishable, easy-to-prepare, canned, or packaged foods (e.g., dried fruit, nuts, high-energy foods).

II.B.4. Personal items

---

a) Toothbrush, toothpaste, and denture adhesive, if necessary  
b) Deodorant  
c) Soap  
d) Mini sewing kit  
e) Feminine supplies  
f) Sunscreen  
g) Shampoo  
h) Tissue (also used as toilet paper)  
i) Pre-moistened towelettes  

Medical  
a) Medications in their original bottles (at least a seven-day supply)  
b) List of current prescriptions and dosage  
c) Copy of medical cards and medical records  
d) Doctor’s name and contact information  
e) Medical consent forms for dependents  
f) Extra glasses or contact lenses  
g) First-aid kit and handbook  
h) Emergency blanket  
i) Examination gloves (non-latex)  
j) Medical equipment and devices, including supplies specific to people with disabilities and others with access and functional needs, such as:  

(1) Dentures  
(2) Crutches  
(3) Prosthesis  
(4) Syringes  
(5) Colostomy bags  
(6) Catheters  
(7) Padding  

II.B.6. Baby items  
Diapers, formula, food, and change of clothing  

II.B.7. Vital documents  
a) Driver’s license or photo identification  
b) Passport  
c) Deeds, titles, marriage license, and birth certificates  
d) Insurance information and policies  
e) Most recent tax returns
f) Social security cards

g) Government programs or services information and eligibility documents (e.g., Veterans Affairs)

h) Will

i) Family photos, including service animals and household pets

II.B.8. Other

a) Car keys and a key to the location an individual is traveling to (e.g., a friend or relative’s home)

b) Emergency cash (small bills), checks, and credit cards

c) A list of out-of-state contacts

d) Solar, hand-crank, or battery-powered flashlight, batteries, spare bulbs, and light sticks

e) Solar, hand-crank, or battery-powered portable radio and batteries

f) Dust mask

g) Manual can opener

h) Matches

i) Pocket knife or multipurpose tool

j) Whistle (to alert rescuers)

k) Sturdy work gloves

l) Heavy plastic garbage bags for tarp, poncho, and waste

m) Sealable, gallon-size plastic bags

n) 200-pound test nylon line

o) Sturdy shoes

p) Change of socks

q) Comfortable, warm change of clothing

r) Blanket or sleeping bag

s) Local maps

t) Non-perishable, canned, or packaged foods (e.g., dried fruit, nuts, and high-energy foods)

u) Bottled water

v) Comfort items (e.g. writing materials, cards, teddy bears, and games)

w) Pet care items, such as food, identification, carrier or cage, immunization records, muzzle or leash, and a recent photo

Table 1: Coordinating and Support Agencies ............................................................................................... 4
Table 2: Federal Assets Response Time ........................................................................................................ 21
Table 3: Record of Change ............................................................................................................................ 30
### I. Introduction

#### I.A. Purpose

The Nuclear/Radiological Incident Annex provides an organized and integrated capability for a timely, coordinated response by the State of Wisconsin to incidents involving nuclear or radioactive materials that are not covered in the State of Wisconsin’s emergency support function (ESF) 10. The US DHS is responsible for the overall federal coordination of all actual and potential terrorist incidents, major disasters, and other emergencies involving nuclear materials. The DOE and DOD are responsible for coordinating the federal response to nuclear incidents involving transportation of materials they own in accordance with their respective plans. This annex describes how WEM coordinates the overall response to a nuclear/radiological incidents at nuclear power plants, transportation accidents, and terrorist incidents at nuclear power plants or involving radiological dispersal devices (RDDs) or improvised nuclear devices (INDs) as set forth in 44 CFR Part 350 with criteria and recommendations contained in NUREG-0654/FEMA-REP-1.

This plan’s objectives are to ensure that the state’s response to a radiological incident will, (a) mitigate or reduce, to the extent practical, any radiological risk or consequence as early as
Radiological Nuclear Annex

possible, (b) prevent or reduce adverse health effects, both short term and long term to the
general public, (c) guide and monitor the actions of emergency responders to minimize
radiation exposure, and (d) operate in concert with any simultaneous local, state, or federal
response that may be in progress.

I.B. Scope

This annex applies to nuclear/radiological incidents, including sabotage and terrorist
incidents, involving the release or potential release of radioactive material that poses an actual
or perceived hazard to public health, safety, national security, or the environment. This
includes terrorist use of RDDs or INDs as well as reactor plant accidents, lost radioactive
material sources, and transportation accidents involving nuclear/radioactive material. The
level of the state’s response to a specific incident is based on numerous factors, including the
ability of local and tribal officials to respond; the type and/or amount of radioactive material
involved; the extent of the impact or potential impact on the public and environment; and the
size of the affected area.

This annex:

I.B.1. Describes the response and operational concepts for the state’s response to any
nuclear/radiological incident, including a terrorist incident that has actual, potential,
or perceived radiological consequences within the State of Wisconsin.

I.B.2. Acknowledges the unique nature of a variety of nuclear/radiological incidents and the
responsibilities of state, local, and tribal governments to respond to them.

I.B.3. Specifies the roles and responsibilities of state, local, and tribal agencies for
preventing, preparing for, responding to, and recovering from nuclear/radiological
incidents.

I.B.4. Includes guidelines for notifying the public and state officials of the state’s response
efforts and activities, coordination of public information, and congressional relations.

I.B.5. Provides protocols for requesting state and federal government resources and
expertise to respond to radiological incidents. These resources and expertise include,
but are not limited to:

a) Wisconsin Department of Health Services (WI DHS)/Radiation Protection Section
   (RPS), which provides the technical expertise to WEM on radiological matters;

b) The Federal Radiological Monitoring and Assessment Center (FRMAC), established at
   or near the scene of an incident to coordinate radiological assessment and
   monitoring; and

c) The Federal Advisory Team for Environment, Food, and Health (known as “the
   Advisory Team”), which provides expert recommendations on protective action
guidance.

I.C. Policies

I.C.1. WEM coordinates the overall state response to radiological incidents with WI DHS
   and FEMA, and terrorist incidents with WI DHS, WI DOJ and US DHS.

I.C.2. WEM coordinates their efforts with US DHS, as the overall incident manager for
terrorism incidents at a nuclear power plant.
I.C.3. Support agencies are responsible for supporting the state’s response to nuclear/radiological incidents as requested by WEM and outlined in their respective ESFs.

I.C.4. The State of Wisconsin uses the Multi-agency Coordination System to coordinate its response. It will have at least one representative as part of the Unified Command System (if one is established) to coordinate the overall response to the incident or any other structure consistent with the National Incident Management System (NIMS) that is capable of providing the required support to work with the federal government and the affected local or tribal governments.

I.C.5. The Federal Bureau of Investigation (FBI) has lead responsibility for criminal investigations of terrorist acts or terrorist threats, and for coordinating activities of other members of the law enforcement community to detect, prevent, preempt, investigate, and disrupt terrorist attacks against the United States, including incidents involving nuclear/radioactive materials.

I.C.6. When the concept of operations in this annex is implemented, state agency plans that address nuclear/radiological incident management are incorporated as supporting plans and/or operational supplements.

I.C.7. State agencies are authorized to respond directly to certain incidents affecting public health and safety which are consistent with their legal obligations and authorities, and consistent with their roles in the respective ESFs.

I.C.8. The owner/operator of a nuclear/radiological facility is primarily responsible for providing notification and appropriate protective action recommendations to state, local, or tribal government officials, and minimizing the radiological hazard and consequences of an incident to the public. The owner/operator has primary responsibility for actions within the facility boundary and may also have responsibilities for response and recovery activities outside the facility boundary under applicable legal obligations (e.g. contractual, letter of agreement, Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA)).

I.C.9. State, local, and tribal governments are responsible for determining and implementing measures to protect life, property, and the environment in areas outside the facility boundary or incident location. This does not relieve the nuclear/radiological facility or material owners/operators from any applicable legal obligations.

I.C.10. State, local, and tribal governments and owners/operators of nuclear/radiological facilities or activities may request assistance directly from the appropriate federal agency and/or state governments with which they have pre-existing arrangements or relationships (e.g. the Emergency Management Assistance Compact (EMAC)).

I.C.11. Response to nuclear/radiological incidents affecting land owned by the federal government is coordinated with the agency responsible for managing that land to ensure that incident management activities are consistent with federal statutes governing use and occupancy. Tribal lands are sovereign nations; therefore federal, state, and local governments may have limited or no authority on these lands. Participating state and federal agencies may take appropriate independent emergency actions within the limits of their statutory authority to protect the public, mitigate immediate hazards, and gather information concerning the emergency.

I.C.12. The state, local, and tribal organizations provide their own logistical support consistent with interagency plans. State, local, and tribal governments are encouraged
to coordinate their efforts with the federal government but maintain their own logistical support, consistent with applicable authorities and requirements.

I.C.13. For radiological incidents involving a nuclear weapon, special nuclear material, or classified components, the agency with custody of the material (DOD, DOE, or NASA) may establish a National Defense Area (NDA) or National Security Area (NSA). NDAs and NSAs are established to safeguard classified information or restricted data, or equipment and material, and place non-federal lands under federal control for the duration of the incident. In the event that radioactive contamination occurs, federal officials coordinate with state and local officials to ensure appropriate public health and safety actions are taken outside of these designated areas.

I.D. Planning Assumptions

I.D.1. Radiological incidents may not be immediately recognized as such until the radioactive material is detected or the effects of radiation exposure are manifested in the population.

I.D.2. Acts of terrorism may occur with or without warning and attacks may occur simultaneously at multiple locations. These attacks may not be immediately recognizable as terrorism by emergency responders.

I.D.3. An act of radiological terrorism, particularly an act directed against a large population center within the United States, will have major consequences that can overwhelm the capabilities of the state, local, or tribal governments to respond and may seriously challenge existing federal response capabilities.

I.D.4. A radiological incident may include chemical or biological contaminants, which may require concurrent implementation of the National Contingency Plan (NCP) or other state plans and procedures.

I.D.5. An incident involving the potential release of radioactivity may require implementation of protective measures for the public and emergency workers.

I.D.6. An expeditious state and federal response is required to mitigate the consequences of the nuclear/radiological incident. Significant radiological incidents will likely trigger implementation of the WERP and National Response Framework (NRF) Nuclear/Radiological Incident Annex.

II. Concept of Operations

II.A. General

II.A.1. This concept of operations is applicable to potential and actual radiological incidents requiring state coordination with local and tribal governments as well as federal agencies.

II.A.2. This annex identifies resources and responsibilities for agencies that will respond to incidents involving radioactive materials, including those at the Byron, Point Beach, or Prairie Island nuclear plants. The Zion, Kewaunee, and Genoa plants are no longer operational, but there is still enough radiological material on site to necessitate planning and some protective actions.
II.B. Types of Incidents and Events

II.B.1. Nuclear Power Plant Incidents and Events

a) Wisconsin has planning and response requirements for six nuclear power plants:
   (1) Kewaunee Power Station located in Carlton, WI (non-operational, spent fuel only)
   (2) Point Beach Nuclear Plant located in Two Creeks, WI
   (3) Prairie Island Nuclear Generating Plant located in Welch, MN
   (4) Byron Nuclear Power Station located in Byron, IL (ingestion only)
   (5) La Crosse Boiling Water Reactor located in Genoa, WI (non-operational)
   (6) Zion Nuclear Power Station located in Zion IL (non-operational, spent fuel only)

b) WEM is the lead state agency for off-site planning and response for one nuclear power plant located within its boundaries.
   (1) Both the 10-mile Emergency Planning Zone (EPZ) and the 50-mile Ingestion Planning Zone (IPZ) for Point Beach are entirely within the State of Wisconsin.

c) WEM shares responsibility for planning and response with the States of Minnesota and Illinois for their respective nuclear power plants.
   (1) The Prairie Island EPZ and IPZ extend into Wisconsin.
   (2) A small portion of the Byron IPZ extends into Lafayette, Rock, Green, and Walworth counties.
   (3) During an emergency at either of these two plants, the response would be coordinated with the state emergency management agency in which the plant resides, as outlined in the appropriate memorandum of agreement (MOA).

II.B.2. Nuclear Power Plant Phases

There are typically three common phases with all nuclear power plant incidents. Each phase is based on the actions taken in response to the incident.

a) The Early Phase (also called the Plume or Emergency Phase) occurs at the beginning of a nuclear plant accident involving a release of radioactive material into the atmosphere. Protective actions are taken to reduce possible exposure but doses may accrue in this phase from deposition and inhalation of radioactive material.

b) The Intermediate Phase, which includes the ingestion and relocation phases, begins after the source of the radioactive release has been brought under control and reliable environmental measurements are available. Doses may accrue in this phase from deposition, re-suspension, and ingestion of radioactive material.

c) The Late Phase (also called the Recovery Phase) begins when actions are taken to reduce radiation levels in the environment to acceptable levels that will allow inhabitants unrestricted use of the area.
   (1) During the recovery phase, all responding agencies will support continuing operations with equipment and staff.

II.B.3. Exercise and Drill Policy
Wisconsin Emergency Response Plan
Radiological Nuclear Annex

The State of Wisconsin negotiates a comprehensive exercise schedule (e.g., dates, participation level) for each eight-year cycle with FEMA Region V.

a) The state fully participates in an exercise with at least one of its nuclear power plants each year and conducts a full-participation ingestion exercise in each eight-year cycle.

b) Counties fully participate in each exercise.

c) The state, counties, and utilities select the criteria that will be evaluated and create exercise scenarios that meet FEMA’s published demonstration requirements.

d) Monthly drills test communications between the nuclear facility and state and county EOCs.

e) Other drills and training events are submitted to FEMA Region V via the Annual Letter of Certification.

II.B.4. Potassium Iodide (KI) Policy

This policy covers the acquisition, distribution, and use of KI in the plume EPZ (10 radial miles surrounding each plant) for the Point Beach and Prairie Island nuclear power plants.

1) KI is a stable form of iodine that can be used to saturate the thyroid gland and block the uptake of radioactive iodine.

2) KI is used when an exposure to radioactive iodine is thought likely to occur or radioactive iodine has been positively identified in the environment.

3) The state radiological coordinator (SRC) has the legal authority to authorize and direct the timely and appropriate dispensing and use of KI.

a) General Public

(i) The primary means of protecting the general population in the event of a nuclear power plant emergency is evacuation.

(ii) Detailed information and tables on the evacuation of the general public, schools, and persons with disabilities and functional needs are available in each of the utilities’ Evacuation Time Estimates (ETE) studies.

(iii) Current policy does not provide for the statewide stockpiling and distribution of KI to the general population but it does support the limited pre-distribution of KI to the general population within any local jurisdiction within the EPZ which specifically requests that KI be available to its general population.

b) Emergency Workers and Immobile Populations

(i) KI will be made available to emergency workers and immobile populations within the EPZ, in the event of a release of radioactive iodine, upon recommendation from the SRC.

(ii) The SRC will authorize and direct the timely and appropriate dispensing of KI.

(c) The RPS SRC will recommend that county health officials authorize the dispensing of KI to emergency workers and immobile populations.
**Wisconsin Emergency Response Plan**

**Radiological Nuclear Annex**

(i) The primary protection of the general public is anticipated to be by early evacuation or sheltering in place, however, KI may be distributed to immobile populations and other persons with special needs where evacuation is not practical or cannot be done in a timely manner.

(ii) RPS utilizes all appropriate federal guidance regarding appropriate dosage and exposure limits.

(iii) It is recognized that possible side effects may occur from the consumption of KI. When recommended, the consumption of KI shall be voluntary and not mandatory on the part of the individual.

(iv) The state, its legal subdivisions, and the administering physicians or other health professionals shall not be held liable in the event of any adverse physical reaction from the consumption of KI.

(v) All individuals receiving KI shall be requested to sign a release form. County health officials are responsible for maintaining accurate records of KI doses administered to emergency workers.

(vi) Resident physicians or other health professionals are responsible for maintaining dose records for the immobile population and service workers in institutions within the EPZ affected by a radiiodine release.

(d) The state has issued an initial three-day supply of KI to the risk counties for emergency workers.

(i) These supplies are stockpiled in facilities designated in each risk county’s plan.

(ii) The counties develop plans for distribution from the county stockpile.

(iii) Initial re-supply in the event of an extended emergency shall be provided from sources within the county or the state, if available.

(iv) The state will assist by securing additional supplies from other risk counties or from pharmaceutical supply houses to ensure the provision of sufficient additional doses of KI to meet local needs.

II.B.5. Non-nuclear Power Plant Incidents and Events

a) Non-nuclear power plant incidents that involve radiological materials will, as required by state statute, primarily be handled by local responders acting with direction from the RPS staff.

1. **RPS will ensure that the WEM duty officer (DO) is notified of any transportation incidents involving radiological materials.**

2. **If the WEM DO receives the first notification from the local responders, he/she will immediately notify RPS using the standard operating guidelines (SOG) found in the DO Manual, Hazardous Materials and Spills SOG 2-30.**

3. **If the incident response escalates to a level that additional state resources are required, the WEM DO will be advised by RPS or WEM management to elevate the state emergency operations center (SEOC) and make appropriate notifications.**

4. **The DO will work with the WEM Administrator to meet requests via procedures outlined in this appendix and elsewhere in the State Emergency Operations Plan (SEOP).**
**Wisconsin Emergency Response Plan**

**Radiological Nuclear Annex**

b) Radiological Transportation

(1) WEM is the Governor’s designated point of contact for notification of radioactive waste and spent fuel shipments that travel through the state.

(a) The initial shipment notification is received by the WEM Administrator and then forwarded to the REP Section Staff.

(b) The REP Section Staff will then be advised to follow the Wisconsin Radiological Transportation Notification Process.

(c) As part of the Wisconsin Act 137, if a radiological shipment is classified as a Highway Route Controlled Quantity (HRCQ) then it must obtain a radiological transportation permit from WisDOT and an armed escort is required.

(2) In the event of a transportation accident involving one of these shipments, local responders would be the first to respond.

(a) Local responders are trained to recognize placards and labels indicating hazardous or radiological materials.

(b) When these warnings are recognized, local responders will contact their Regional Hazardous Material Response System Team or the WEM DO.

(c) The DO will contact the RPS SRC.

   (i) The RPS may deploy a team to the incident site to survey the shipment to determine if the package was compromised in the incident.

   (ii) They will also survey the people, vehicles, and environment to determine if there has been any contamination.

c) Wisconsin Radiological Nuclear Detection Program

The Wisconsin Radiological/Nuclear Detection (RND) Program is a preventative program that enhances the radiological and nuclear terrorism prevention capacity in the State of Wisconsin by expanding and coordinating radiological detection capabilities to detect and interdict illicit radiological and nuclear materials before harm can be done during steady state operations and at large special events across the state.

(1) During primary screening if a radiation source is detected causing an alarm with the primary detection equipment, basic tactics and techniques are used to adjudicate the situation.

(2) If adjudication is not possible at this level, or the situation seems suspicious, a secondary screening may be requested via the WEM DO, bringing in local assets or the State HAZMAT Team.

(3) In the event the State HAZMAT team cannot adjudicate through secondary screening, or if it is determined that the detection involved is a nefarious agent/isotope of concern, the 54th CST will be requested through the WEM DO.

(4) If adjudication cannot occur at this level, federal support can be requested as laid out in the RND Concept of Operations and the WEM Hazardous Materials and Spills Incident SOG 2-30.

II.B.6. Hostile Actions
Wisconsin Emergency Response Plan
Radiological Nuclear Annex

Terrorist incidents are any violent acts dangerous to human life, in violation of the criminal laws of the United States or of any state, to intimidate or coerce a government, the civilian population, or any segment thereof, in furtherance of political or social objectives. Terrorist activities addressed in this annex are specific to deliberate attacks on a nuclear plant, or the detonation of an RDD.

a) Notifications of these incidents would occur through the communication systems already in place, as described in ESF 2.

b) If the nuclear plant were incapacitated, notification could come from several other sources, local law enforcement, local emergency management, WI DOJ, or the Nuclear Regulatory Commission (NRC).

c) All appropriate ESF’s would be activated in the SEOC, and the WI Homeland Security Council (HSC) and Joint Terrorism Task Force (JTTF) would convene.

d) WEM would deploy regional staff to the affected county EOC’s and request that our Emergency Police Services (EPS) Deputy be positioned at the Incident Command Post (ICP).

e) Response to a radiological terrorist incident would differ from the response to other radiological incidents in the following ways:

1. Wisconsin Department of Justice/Wisconsin Statewide Information Center (WI DOJ/WSIC) would have a more prominent role as they would serve as the state liaison with federal investigative and intelligence agencies. WSIC analyzes suspicious incidents relating to homeland security issues and shares related information with state, local, and tribal governments.

2. The site of any terrorist attack becomes a crime scene as well as an incident site. Law enforcement agencies will need to preserve and collect evidence while emergency responders perform the same types of duties they would perform in other emergency situations.

3. A joint information center (JIC) would be established but with a local and federal law enforcement presence in addition to state and local Public Information staff. The FBI would review all media releases before they are issued.

4. Protective actions for radiological incidents are usually formulated and recommended by the state to the counties. For terrorist incidents, situational information from local law enforcement would be required before any protective actions could be implemented.

III. Responsibilities and Tasks-Response

III.A. Notification and Mobilization

III.A.1. Point Beach Nuclear Plant

a) State and county emergency management agencies use standardized forms to expedite communicating information.

b) EMNet is the primary means for notification and communication during an incident.

1. It is a dedicated system that uses the internet as Primary and Satellite as an automatic backup.
This system provides a secure, dedicated communications between the affected plant, and county and state responders.

The code for each location and call groups is in the State Emergency Operations Plan (EOP) Telephone Directory. User priorities for EMNet are:

(a) Siren activation
(b) Incident Notification/Protective Action Recommendation (PAR) Upgrade
(c) Status Update
(d) General Information/Coordination

III.A.2. Prairie Island Nuclear Generating Plant

a) NXT Communicator is the notification system used by Prairie Island to notify Wisconsin, Minnesota, and the affected counties of an incident at the facility.

(1) The system sends an email of the standardized notification form to each notification point (i.e. WEM Central Office, Pierce County, and Wisconsin Department of Transportation (WisDOT)/Wisconsin State Patrol (WSP)) and then follows up with a conference call with all notification points.

(2) NXT Communicator is used for notification only and can be transferred to another location if the Emergency Operations Center (EOC) relocates.

(3) The National Warning System (NAWAS) is used by Prairie Island as a backup to the NXT Communicator notification system.

III.A.3. Byron and Zion Nuclear Power Plants

a) The State of Illinois notifies WEM of any incidents via commercial telephone lines.

(1) Byron is an ingestion pathway risk only for Wisconsin.

(2) Zion is not operational and cannot have an incident that exceeds an Alert classification.

III.A.4. La Crosse Boiling Water Reactor (Genoa) and Kewaunee Power Station

a) The plants notify WEM of any incidents via commercial telephone lines.

(1) Genoa and Kewaunee are not operational and are considered a storage facility only. The plants cannot have an incident that exceeds an Alert.

III.A.5. All nuclear power plants affecting Wisconsin also use commercial telephone lines, cellular, and facsimile machines as back-up communications.

a) During business hours the REP Section receives notification and subsequently notifies the DO and SRC.

b) During non-business hours and holidays State Patrol receives notification and subsequently notifies the DO and SRC. The DO and SRC will respond per the procedures in the WEM Duty Officer Manual, SOG 2-20.

c) Telephone numbers are updated quarterly, by the REP Section Operations Program Associate (OPA), via the State’s incident management software alert groups. The OPA position is responsible for maintaining and updating REP related contact information.
Wisconsin Emergency Response Plan
Radiological Nuclear Annex

d) The state will partially or fully elevate its EOC as directed by the WEM Administrator or Senior Duty Officer (SDO) based on information supplied by the nuclear power plant and the SRC, who are continually assessing the situation and the potential for escalating to a higher emergency classification level (ECL).

(1) Unusual Event

(a) WEM Administrator/SDO and SRC are notified; the DO monitors the situation.

(b) State Public Information staff may be dispatched to the EOC or JIC.

(c) For an Unusual Event, the SEOC is NOT elevated unless the SRC specifically recommends it.

(2) Alert

(a) WEM Administrator/SDO, SRC and FEMA Region V are notified.

(b) The SEOC is automatically elevated at the ALERT and the WEM Administrator/SDO determines to what level (partial or full).

(c) The SRC determines if radiological monitoring teams are to be activated and dispatched to the scene.

(d) State Public Information staff may be dispatched to the JIC.

(3) Site Area Emergency

(a) The WEM Administrator/SDO, SRC and FEMA Region V are notified.

(b) The SEOC is fully elevated.

(c) State Public Information staff is dispatched to the JIC; the Radiological Monitoring Teams are activated and dispatched to the affected county(s).

(4) General Emergency

(a) The WEM Administrator/SDO, SRC, and FEMA Region V are notified.

(b) The SEOC is fully elevated.

(c) State Public Information staff is dispatched to the JIC.

(d) The Radiological Monitoring Teams are activated and dispatched to the affected county(s).

III.A.6. The WEM Administrator or designee coordinates the state’s response to a nuclear power plant incident from the SEOC with other state, federal, local, and tribal agencies.

a) SEOC activities are outlined in the SEOC Position Manuals.

b) If the SEOC is not yet operational and circumstances at the plant require an immediate Protective Action (i.e., evacuation or shelter in place) of the population in all or part of the EPZ, the sheriff, incident commander, or other designated county official may implement either the utility PAR or the default PAR (whichever is most conservative) without coordination with the state or other affected county.

III.A.7. If adjacent states are affected and it is mutually agreeable:

a) The state may send a liaison to the other affected state's EOC.
b) An SRC liaison may be sent to the affected plant’s Emergency Operations Facility (EOF).

III.A.8. ECL’s are determined by plant personnel, transmitted to the WEM DO or to the SEOC, verified by callback by the SRC, and then become the basis for state, local, and tribal government offsite response.

III.A.9. The state reserves the discretion to initiate offsite response, regardless of ECL, based on its independent assessment of data provided by plant authorities, offsite field conditions, meteorological data, and state and local emergency response capabilities.

III.A.10. Offsite response decisions and PARs are based on the EAL, which is the basis for the ECL declaration. Based on the EAL and off-site conditions, the SEOC Manager, SRC, and counties concur on the off-site response or PAR.

a) The response can be all or any combination of response activities for the ECL.

b) Protective actions or assistance needed for evacuation routes and/or transportation for onsite individuals at Point Beach Nuclear Plant are supported by Manitowoc County.

c) Prairie Island Nuclear Generating Plant is provided assistance for evacuation routes and/or transportation by Minnesota.

III.B. Emergency Public Information

III.B.1. During an emergency, priority information is released to the public via media advisories and pre-scripted Emergency Alert System (EAS) messages.

a) Radio and television broadcasts are prepared and initiated by the counties.

b) The following pre-scripted messages are contained in the EAS Message Manual:

1) Media advisories include "First Notice" of the NPP incident, a “Livestock Advisory,” and “School Evacuations”.

2) EAS messages and Special News Bulletins provide instructions to the public about Protective Action Decisions (PADs) and how to implement them.

   (a) The appropriate EAS message is broadcast to the public by the counties using their Public Alert and Notification Systems.

   (b) The information contained in the EAS messages and any additional information needed by the public is disseminated via media releases and media briefings.

III.B.2. Protective Action Recommendation (PAR) Procedure:

a) Point Beach Nuclear Power Plant

   1) Upon official notification of the utility PAR, the state agrees to implement the utility PAR unless either of the following occurs:

   (a) The SRC determines that the utility PAR is inconsistent with data provided by the utility or with current meteorological data and can develop an alternate PAR within five minutes. The SRC then recommends the utility PAR or the alternate PAR to the Officer in Charge (OIC).
Wisconsin Emergency Response Plan
Radiological Nuclear Annex

(b) At the time the OIC/Ops is seeking concurrence from the affected counties, one of the counties has extenuating circumstances and wishes to implement a more conservative PAR. Any changes of the SRC recommended PAR will be coordinated by WEM Operations staff.

Note: The initial minimum PAR for the Point Beach plant is evacuation in all sectors out to five miles.

(2) Once the PAR is agreed upon by both the state and the affected counties and is approved by the WI Governor’s Designee, the OIC acknowledges that the PAR is now a Protective Action Decision (PAD).

(3) WEM Operations coordinates with the affected counties to select the appropriate EAS message and set the time to sound the sirens.

(4) The counties send the pre-scripted EAS message and Special News Bulletin to the EAS station(s).

(5) The stations broadcast the messages immediately after the sirens are sounded.

(6) The same procedure is followed for changes and updates to PARs.

b) Prairie Island Nuclear Generating Plant

(1) Upon official notification of the utility Protective Action Recommendation (PAR), both states agree to implement the utility PAR unless either of the following occurs:

(a) The SRC or Minnesota Planning Assessment Chief (PAC) determine that the utility PAR is inconsistent with data provided by the utility or with current meteorological data and can develop an alternate PAR within five minutes. The SRC and PAC then recommend the utility PAR or the alternate PAR to the OIC and the State of Minnesota’s State Incident Manager (SIM) respectively.

(b) At the time the OIC or SIM is seeking concurrence from the affected counties, one of the counties has extenuating circumstances and wishes to implement a more conservative PAR. Coordination of any change of the SRC/PAC recommended PAR will be handled by WEM Operations and the State of Minnesota’s Homeland Security and Emergency Management (HSEM) Operations.

(i) Wind speed less than five miles per hour:

Evacuate all areas five miles, 360 degrees.

(ii) Wind speed greater than or equal to five (5) miles per hour:

Evacuate all areas two miles, 360 degrees and the five downwind sectors out to five miles.

(2) Once the PAR is agreed upon by both states and the affected counties, and approved by the Minnesota Governor’s Authorized Representative and Wisconsin Governor’s Designee, the SIM and OIC acknowledge that the PAR is now a Protective Action Decision (PAD) and set the time for the sounding of the sirens.

(3) The State of Minnesota will initiate siren coordination and broadcast EAS messages for the area surrounding the 10 mile EPZ on behalf of Dakota and Goodhue Counties in Minnesota and Pierce County, Wisconsin.
III.B.3. JIC

a) JIC locations and contact information for NPP incidents can be found in the telephone list of the State EOP.

b) Public information and JIC operations are detailed in ESF 15 – External Affairs.

c) Public information officers (PIOs) and support staff have access to the entire JIC and security is the responsibility of the hosting entity.

d) The state’s JIC staffing for a NPP incident may include a lead PIO, assistant PIO, Emergency Management and Radiological Health Technical Advisors and one or more support staff.

e) The JIC locations are:

   (1) Prairie Island Joint Information Center
       The State of Minnesota
       Homeland Security and Emergency Management
       State Emergency Operations Center
       Town Square
       444 Cedar Street
       St. Paul, MN
       JIC Suite 223
       Media Briefing Room Suite 155

   (2) Point Beach Joint Information Center
       3060 Voyager Drive
       Green Bay, WI

III.B.4. The public will be provided via press release with a public inquiry “hotline” phone number, at a time deemed appropriate, and will be instructed to use this number for all questions regarding incidents at NPPs.

a) Phone numbers used for public inquiry are pre-established and published in the annual Emergency Planning Calendars and Guides.

b) Identified rumors will be logged and passed onto the appropriate agency for response.

   (1) Rumors may be addressed through media releases, briefings, or by individual contact.

   (2) Rumors will not be addressed through EAS broadcasts unless the rumor(s) interferes with protective actions.

III.B.5. The state works with the utilities and counties to conduct a coordinated yearly program to acquaint the media with their emergency plans, information concerning radiation, and points of contact for release of public information.

a) The program includes the annual mailing to the media in the form of a media packet which includes the locations of the JIC for that plant, names and contact information for the plant, county and state PIOs, public inquiry numbers, a description of each organization’s duties and responsibilities, and general information about radiation.

b) The packet also includes the yearly emergency planning calendar and visitor/transient brochure which are distributed to residents, businesses, and recreational areas in the EPZ.
Although not required, the Point Beach calendars are also translated in Spanish and Hmong.

c) Additional mailings to local media occur throughout the year as special mailings, inviting the media to participate/observe in exercises or training events.

III.B.6. Ingestion Information

The state publishes and distributes information for protecting the public and livestock from ingesting contaminated food, feed, and water within a 50-mile radius (the IPZ) of each nuclear power plant.

a) This information is included in the plants’ annual Emergency Planning Information Calendar and in the state’s ingestion brochure titled “Wisconsin Radiological Emergency Information for Farmers, Food Processors, and Distributors.”

b) These documents are distributed, as appropriate, throughout the IPZ.

(1) A number of these brochures are placed with the county emergency management director and UW Extension Agents in each affected county for distribution to county and local agencies.

(2) The ingestion brochures are also available to view on the Wisconsin Emergency Management website.

(3) In the event of an incident, an adequate number of copies for county-wide distribution could be printed using the following procedure:

(a) A camera-ready copy of the ingestion brochure is maintained by WEM.

(b) Arrangements have been made for emergency printing of brochures for the affected counties at state printing facilities in Madison.

(c) Affected counties will be contacted and asked for the number of brochures they need.

(d) WEM arranges for delivering copies of the brochure to the EOC in each affected county via WSP or other means.

(e) The counties are responsible for distributing brochures to the food producers, processors, and distributors in the affected risk and ingestion counties.

III.C. Radiation Control and Sampling

III.C.1. Radiation Control

a) RPS/SRC will:

(1) Direct and coordinate the assessment of the radiological impact of the incident, perform dose assessment calculations and recommend or revise protective actions made to the Governor or designee.

(2) Advise county decision makers regarding stay times, turn back values, ingestion of KI, and monitoring the exposure of emergency workers.

(3) Receive and give periodic status updates, coordinate activities or negotiate protective action recommendations with the Forward Operating Center/Mobile Radiological Laboratory, other state agencies (e.g., WEM, DATCP, and DNR), federal agencies, neighboring states, county radiological officer and the utility.
Wisconsin Emergency Response Plan

Radiological Nuclear Annex

(4) Identify the need for additional field monitoring, sample collection, and sample analysis resources and establish liaisons with federal response centers. Coordinate requests for federal or other state assistance with WEM.

(5) Assist with the public information effort by providing technical information to the JIC, assisting PIOs with resolving incorrect information or rumors, working with WEM to provide technical information to elected officials and developing information regarding long-term response efforts.

b) WI DHS has lead responsibility for 24-hr/day capability monitoring and assessing individuals contaminated with radioactive material, emergency workers, and vehicles that arrive at reception centers.

(1) WI DHS health monitoring personnel at the reception centers are supplemented by trained local Auxiliary Health Monitors who operate under WI DHS supervision.

(2) WI DHS has a roster of trained state and local government personnel who serve on state radiological emergency response teams that perform both field and health monitoring.

(3) State team members are responsible for supervising health monitoring activities at the reception center.

(4) WI DHS will maintain and calibrate the designated equipment.

(5) The county ensures that the appropriate equipment is at the reception center at the time of activation.

(6) Wisconsin DHS is responsible for all radiological monitoring equipment.

(7) The type, number, and locations of equipment can be found in the RIRP.

c) The oversight of care and treatment of radioactively contaminated, injured, or exposed emergency workers and the general public is a state responsibility.

(1) Under the provisions of the REP Program Manual, RPS has worked with the utilities and counties to identify nearby hospitals to be responsible for this function.

d) The transportation of radioactively contaminated, injured, or exposed emergency workers and the general public is a county responsibility.

(1) Under the provisions of the REP Program Manual, RPS has worked with the utilities and counties to identify nearby transportation providers to be responsible for this function.

III.C.2. Food, Animal, and Plant Services

a) State government has the primary responsibility for protecting the public from ingesting contaminated food and water resulting from an incident at a NPP. This responsibility is shared by four state agencies:

(1) WEM

(2) RPS

(3) DNR

(4) DATCP

b) Other state and federal agencies that may assist include:
The Cooperative Extension Service

State and County Food and Agriculture Councils (FACs)

These agencies may serve as coordinators for the USDA local-level response. DATCP is also responsible for keeping these agencies informed of the situation status and for coordinating all agencies’ resources.

c) The SRC manages all field monitoring and sampling activities in Wisconsin using staff from:

(1) RPS
(2) The University of Wisconsin
(3) Local health departments, and
(4) Federal sampling teams
(5) Staff from DATCP is used to collect food-related and water samples in areas outside the 10-mile EPZ.

d) In coordination with local officials, actions to protect the public from the ingestion of radioactively contaminated food or water (e.g. agricultural holds, disposal of contaminated food or animals, shutting down surface water intakes for public water supply systems, curtailment of hunting or fishing) will be reviewed and determined jointly by WEM, WI DHS, DATCP and DNR staff in the SEOC. They are implemented through state agency rules by state agency personnel and are announced to the public through the media.

e) PARs are based on the analysis of sampling conducted at predetermined locations within the 10-mile EPZs.

(1) Environmental sampling outside the 10-mile EPZ will be directed at determining the limits of the area of radiological impact (i.e. the “plume”) and determining the level of contamination of food and water within and adjacent to the plume area.

(2) The state has maps for use describing the EPZ and IPZ for each plant, in addition to evacuation routes, reception and congregate care centers, traffic control points, and radiological sampling points.

(a) The maps are stored in the SEOC and the SRC work area.

(b) They are also available on CD (located in the back of the plan binder) and can be printed as needed.

f) DATCP is responsible for developing procedures to utilize this information system to inform affected food producers, processors, and distributors about protective action recommendations and required post-incident response actions.

(1) DATCP maintains up-to-date computer records of food producers, processors, and distributors within the IPZs of all NPPs affecting Wisconsin.

(2) Maps for recording information on the status of the emergency and for monitoring key land-use and other ingestion-related data are developed and maintained by county agricultural or extension agents and the USDA office located in Wisconsin.

(3) During an incident, SEOC receives data from RPS field teams and develops maps tracking dose rates in the affected areas, which DATCP may use to determine the
impact on food producers and processors. FRMAC also assists the state in developing these maps.

III.D. Request for Federal Assistance

III.D.1. Local resources will provide the primary response for incidents within their jurisdiction.
   a) The state provides additional resources upon local request, to include requesting federal assistance resources.
   b) The Governor of Wisconsin or designee is authorized to request federal assistance in the event of a nuclear power plant incident (Wisconsin Statute § 323.12(4)(b)).
   c) When requesting federal resources, the state will identify the type and quantity of resources needed from federal agencies.

III.D.2. Coordination with the federal government for the direction of offsite emergency response is secured under the provisions of the appropriate federal plans (e.g. National Response Framework (NRF) and the Nuclear/Radiological Incident Annex).
   a) The Nuclear Regulatory Commission (NRC) is the Lead Federal Agency (LFA) for NPP incidents.
   b) Primary coordination occurs through WEM and the NRC for radiological issues, FEMA for non-radiological issues, and DOE for monitoring and assessment issues.
   c) Communications with federal agencies occurs with “home office” staff and with field locations when they are established.
   d) WEM is also kept informed of contacts regarding the incident between state agencies and their federal agency counterparts through EOC briefings and shared event logs.

III.D.3. At a Site Area Emergency ECL, the OIC or SRC will advise the LFA or DOE to alert the Region V Radiological Assistance Program (RAP) Team and the FRMAC (including the Advisory Team) of the incident. If the incident escalates and the OIC and SRC determine they and other federal agencies and assets are necessary, they will request them from the LFA or DOE.

III.D.4. Federal assets, such as the Consequence Management Home Team (FRMAC support), are available via phone and computer to provide support until the first Consequence Management Response Team (CMRT) arrives and becomes operational.

Table 2: Federal Assets Response Time
III.D.5. The state has a Letter of Agreement (LOA) with Austin-Straubel Airport (Green Bay) and Brown County (for the Point Beach NPP) to provide landing capability, operations and storage space, lodging, facilities, and logistics support for the various federal assets and personnel requested.

III.D.6. The State of Minnesota maintains LOAs with the Minneapolis airport and Minnesota counties for the Prairie Island NGP.

IV. Responsibilities and Tasks-Recovery

IV.A. Wisconsin Recovery Task Force

IV.A.1. The State Recovery Task Force will consist of the WEM Administrator (or designee) and representatives from the following agencies/organizations, as needed:

a) WI DHS – Divisions of Public Health, Disability and Elderly Services, and Health Care Financing
b) WI Department of Children & Families (DCF)
c) WisDOT – Divisions of Transportation System Development and Wisconsin State Patrol
d) DNR – Divisions of Enforcement, Environmental Quality & Resource Management
e) DATCP – Divisions of Food, Animal Health and Agricultural Resource Management
f) DMA – The Adjutant General
g) PSC Chairperson
h) ARC Director of Disaster Services
i) Other state agencies as deemed appropriate

IV.A.2. The task force will also include appropriate representation from the risk and ingestion counties, the utility, and affected adjacent states.

IV.A.3. Federal representation should include liaisons from the Federal Advisory Team for Environment, Food and Health and may include some or all of the agencies identified in the NRF and the Nuclear/Radiological Incident Annex.

IV.B. Recovery Operations

State recovery operations are a natural extension of the Governor’s responsibilities as delegated to WEM under Chapter 323 Wis. Stats.

IV.B.1. When the administrator determines that the response phase has been completed:
Wisconsin Emergency Response Plan
Radiological Nuclear Annex

a) The WEM Administrator, after consultation with other federal, state, local, and tribal officials and agencies, coordinates with the Governor to transition from the response phase to the recovery phase.

b) The transition time is announced to all responders at the federal, state, local levels and that a State Recovery Task Force has been established.

IV.B.2. The Task Force will manage the recovery efforts for offsite areas affected by an incident at a NPP.

a) The WEM Administrator, acting on behalf of the Governor, will create and chair the State Recovery Task Force, identifying which agencies and organizations will compose it.

b) The Task Force will guide recovery efforts in those areas affected by the incident at the NPP and shall create a recovery plan to address responsibilities including, but not limited to:

(1) Developing a long-term radiological monitoring and assessment plan.

(2) Developing a plan for the decontamination and restoration activities of both ingestion areas and restricted zones as closely as possible to their pre-incident condition.

(3) Determining priorities for and scheduling restoration activities.

(4) Determining which agencies and organizations can provide the personnel, equipment, and resources necessary to complete restoration activities and securing this assistance.

(5) Determining which areas must remain restricted on a long-term or permanent basis due to radiological or economic considerations.

(6) Arranging for services to the evacuated population.

(7) Assisting evacuated individuals, businesses, and industries with return or resettlement activities.

(8) Creating a process for identifying losses caused by or resulting from the incident and for negotiating reimbursement of those losses from the utility and its insurers (e.g., American Nuclear Insurers).

(9) Provide continuing public information about recovery actions, activities, and timetables through the media.

V. Exercise Cycle/Exercise Participation Levels

V.A. State Exercise Frequency

V.A.1. Exercises and drills are conducted in accordance with NRC and FEMA rules and policy, based on simulated incidents at nuclear power plants, to test and evaluate state and local offsite radiological emergency response capabilities and to develop and maintain key skills in emergency responders.

V.A.2. WEM conducts required exercises with two nuclear plants, which have all or part of their plume or ingestion exposure pathway EPZs in Wisconsin. These are:
Wisconsin Emergency Response Plan
Radiological Nuclear Annex

a) Point Beach, and
b) Prairie Island (plume and ingestion)

V.A.3. Each exercise cycle covers a period of eight years.

V.A.4. Scenarios for exercises will be varied from exercise to exercise and will include all required scenario variations during the exercise cycle, including but not limited to:

a) Ingestion pathway, and
b) Hostile action based

V.A.5. Counties are required to fully participate in all exercises.

V.A.6. The state will fully participate in exercises (this includes all affected state agencies), but may partially participate if state objectives were successfully demonstrated in an exercise with the same counties during the exercise cycle.

V.A.7. It is Wisconsin’s policy to fully staff the SEOC with state agency liaisons, but not conduct field operations for partial participation exercises.

V.A.8. If it is determined that a partial participation exercise is appropriate then the state will send a letter requesting exemption from full participation to the FEMA Regional Office.

a) If approval is granted, partial participation will be clearly described in the extent of play agreement.

b) FEMA will provide an evaluator for any unevaluated activities and the state and/or counties will be subject to the same issues, level 1 findings, etc, as they would during full participation in an exercise.

V.A.9. The REP Program Manual requires that states exercise, at least biennially, with each of their “plume EPZ” nuclear power plants.

a) The State of Wisconsin has a policy of exercising with the Prairie Island NPP in even-numbered years and with the Point Beach NPP in odd-numbered years.

b) The REP Program Manual further requires that a state fully participate in an exercise with each of its “plume EPZ” nuclear power plants at least once during the eight-year-cycle.

V.A.10. Each state and “risk” county must demonstrate the ability to carry out emergency response functions (i.e., elevate EOCs, mobilize staff that report to the EOCs, establish communications linkages, complete notifications).

V.A.11. Exercises are scheduled eight years into the future.

a) Dates for exercises are negotiated and finalized for all of FEMA Region V states at a regional exercise scheduling conference held each year.

V.B. County Exercise Frequency

V.B.1. The REP Program Manual requires that each “risk” county fully participate, at least biennially, in an exercise with its respective nuclear power plant (or plants).

a) Pierce County, Kewaunee County, and Manitowoc County all follow this schedule.
V.C. Exercise Planning

V.C.1. Exercise Objectives

a) State, county, and utility planners at a pre-exercise planning meeting (or meetings) jointly agree upon exercise objectives.

b) Exercise objectives are reviewed with the FEMA regional office and then discussed at an Extent of Play meeting which is held at least 100 days prior to the exercise date.

c) The Extent of Play describes the logistics to demonstrate criteria, any special circumstances for demonstrating the objectives, and any deviation from current plans and procedures.

d) This meeting is attended by representatives from FEMA, WEM, RPS, the counties, and the utility.

V.C.2. Exercise Scenarios

a) Exercise scenarios shall simulate an emergency at a nuclear power plant that results in an offsite radiological release which will require the mobilization of sufficient state and county resources to verify the effectiveness of the emergency response plans and response capability of these agencies/organizations.

(1) Onsite scenarios are developed jointly by the utility and the state to meet the exercise objectives identified in the pre-exercise meeting and which have been approved by FEMA.

(2) Offsite scenarios are then developed by the state, based on the onsite scenario.

(3) The state will provide to FEMA a separate timeline for the utility activities in the exercise and one for the offsite response organization (ORO) response activities.

(4) The state will also develop a timeline integrating the utility and ORO timelines.

(5) The timelines will be provided to FEMA for review and approval, at least 60 days in advance of the exercise date.

(6) Scenarios will be varied from year-to-year to ensure that all major elements of plans and preparedness are tested within an eight-year period.

b) Exercise scenarios are to have only very limited exposure, prior to the exercise, to ensure the spontaneity of state and county response.

c) The scenarios are to be developed in response to a time schedule of real and simulated incidents initiated at the NPP and will provide a narrative summary which may include such events and simulated casualties, offsite fire department assistance, rescue of personnel, use of protective clothing, deployment of radiological monitoring teams, simulation of road blocks along evacuation routes, test evacuations, opening of reception and congregate care centers, radiation monitoring of evacuees, and public information activities.

V.D. State Observation/Assessment of Exercises

V.D.1. WEM personnel and personnel from other state agencies, other states, volunteer organizations, and the private sector will at various times request an opportunity to observe the exercise, visiting various field locations, and during off-shift periods, also observe operations in the SEOC.
V.D.2. WEM regional directors, serving as liaisons at the county EOCs, will also observe local response activities.

V.D.3. Observers will be provided, at a minimum, the exercise timeline for all activities, exercise staffing list, and the Extent of Play.

V.D.4. At the end of the exercise, observers will be asked to participate in a critique of the response organizations operations during the exercise and can suggest changes to procedures to improve response operations.
   a) An exercise controller will note all comments and include them as part of the complete exercise critique package.
   b) If needed, debriefing sessions will be held following the exercise to discuss both successes and functional areas in need of improvement.

V.E. Federal Evaluation/Critique of Exercises

V.E.1. Federal officials will observe each exercise and will comment on the effectiveness of state and county response, in accordance with FEMA radiological emergency planning (REP) exercise methodology, at a post-exercise critique.

V.E.2. Problems with state and county performance are categorized as:
   a) Level 1 finding, formally known as deficiencies (e.g. those which directly affect the capability to protect the health and safety of the public in the vicinity of the NPP) or
   b) Level 2 finding, formally known as areas requiring corrective action (ARCA) (e.g. those not putting public health and safety at risk, but which must be corrected during or before the next scheduled biennial exercise).

V.F. Response to the Federal Evaluation

V.F.1. Within 30 days following the exercise, FEMA will send a draft exercise report to the state, which includes the above evaluation.

V.F.2. A final formal report will be sent 90-days after the exercise.

V.F.3. State REP staff will share the report with affected state agencies and the county (or counties) and request those agencies to respond with a schedule of corrective actions.

V.F.4. State staff will then develop an appropriate response to the FEMA Region V office.

V.F.5. This response will indicate plans for and timing of proposed corrective actions, including changes in state and county emergency response plans and exercise procedures.

V.F.6. WEM REP staff will monitor state and county progress in implementing these actions.

V.G. State Exercise Assistance

V.G.1. WEM REP staff will work with state agencies and the affected county (or counties), to assist in preparations for the exercise. Exercise preparation may include, but not be limited to:
   a) Briefings of state and county personnel
b) Table-top practice exercises

V.G.2. Federal observers will be briefed prior to each exercise regarding any recent changes in state or county plans and any special features or specific locations of exercise activities.

V.H. Communication Drills

V.H.1. Communications between the nuclear facility, the SEOC, Field Assessment Teams, and county EOCs are tested annually (or more frequently), through the use of:
   a) Communications drills, and
   b) Monthly through recorded communications tests that include message content checks.

V.H.2. The Operations Program Associate position is responsible for quarterly updates to each procedure that contains telephone numbers.

V.I. Other Drills and Training Events

V.I.1. NUREG-0654 and the REP Program Manual direct that annual drills be conducted with at least one hospital and transportation provider in the vicinity of each NPP.

V.I.2. In Wisconsin, these drills are sometimes conducted in conjunction with the NPP exercises and are separately conducted at other times.

V.I.3. In response to NUREG-0654, radiological monitoring and health physics drills are also jointly conducted in conjunction with NPP exercises.

V.I.4. Health physics drills are conducted at least semi-annually.
   a) These drills include collection and analysis of all types of sample media and provisions for communications and record keeping.
   b) State and county personnel will participate.
   c) Additional training in the collection and evaluation of samples, and response to and analysis of simulated elevated airborne and liquid samples, as well as direct radiation measurements in the environment will be conducted by the RPS, at annual training events for state and local personnel.
   d) These sessions will be conducted at various locations throughout the state in proximity to the NPPs and will include familiarizing the participants with established locations of offsite field monitoring points.

VI. Radiological Incident Response Training

Emergency management training for local and tribal government officials is provided by WEM through its training program and through FEMA resident and non-resident training courses. Specific training is provided to the “risk” counties through pre-exercise briefings, “table-top” practice exercises, and the annual radiological emergency response exercises and drills.
VI.A. "In-house" training

“In-house” training for accident assessment is provided by the RPS who conducts an annual two-day radiological field-monitoring seminar to train state response teams.

VI.A.1. Police, security, and fire-fighting personnel receive training from the utilities and are tested with simulated emergencies during their participation in nuclear power plant exercises.

VI.A.2. All WEM employees are expected to complete a set of training courses. The core courses provide a foundation for performing WEM operational support responsibilities in the State Emergency Operations Center (SEOC). At WEM the core courses are expected to be taken within the first six months of employment, with additional required courses within three years. To see the complete list of training courses visit the WEM training portal or contact the WEM Training Supervisor.

VI.A.3. In addition, the REP section conducts an annual SEOC training as well as position specific training for state agency staff.

VI.A.4. First aid, rescue, and support service personnel are tested in drills and exercises conducted jointly by the utilities and affected local and tribal governments. Medical support personnel are tested in annual exercises conducted between the utilities and local hospitals designated to receive, decontaminate, and treat radiation-exposed personnel.

VI.A.5. Individuals responsible for transmission of emergency information and instructions are trained during the simulated emergency situations in nuclear plant drills and exercises. In addition, WEM sponsors training courses in the operation and use of the EAS and responsibilities of local PIOs.

EXECUTIVE ORDER # ___

Relating to a Proclamation Declaring a State of Emergency in Response to a Radiological Disaster

WHEREAS, a radiological disaster caused by an accident at _________________ has affected the State of Wisconsin; and

WHEREAS, such a radiological disaster creates emergencies of concern to the State of Wisconsin; and

WHEREAS, the counties of _________________ have been affected as a result of the radiological disaster on _________________.

NOW, THEREFORE, I, Scott Walker, Governor of the State of Wisconsin, by the authority vested in me by the Constitution and laws of this State, and specifically by Sections 321.39(1)(a) and 323.10 of the Wisconsin Statutes, do hereby:

1. Proclaim that a State of Emergency exists throughout the State of Wisconsin; and

2. Designate the WEM Administrator as the State Coordinating Officer to coordinate all state agencies of the State of Wisconsin to assist the in the response and recovery efforts to this situation; and

3. Call to state active duty such elements of the Wisconsin National Guard as the Adjutant General deems necessary to assist civil authorities for purposes of assisting in response and recovery efforts as well as providing security and other essential services; and

4. Authorize the Adjutant General to utilize personnel called to state active duty pursuant to this order in emergency status.

IN TESTIMONY WHEREOF, I have hereunto set my hand and caused the Great seal of the State of Wisconsin to be affixed. Done at the Capitol in the City of Madison this ___ day of ______________ in the year ______.

List of Tables

Table 1: JIC Position Functions ................................................................................................................................. 7
I. Introduction

I.A. Purpose

This attachment provides guidance to individuals staffing a Joint Information Center (JIC) specifically for an incident at one of the nuclear power plants. The term “utility” will refer to one of the three nuclear plants for which Wisconsin is required to plan. It does not refer to any other nuclear power plant or facility outside of Wisconsin’s planning jurisdiction.

The intent of forming a JIC is to provide the media and the public with a single location from which to gain timely and accurate information about a particular incident. The staffing of the JIC will be comprised of representatives from the affected utility, the State of Wisconsin, and counties within ten miles of the affected plant. Additional representation at the JIC may consist of various federal agencies, local, or tribal governments directly impacted by the incident.

Information compiled by the agencies participating in the JIC is shared prior to media briefings. To ensure that accurate information is being given to the public and news media, rumors and trends are monitored from a variety of sources. These sources include calls received by the telephone hotline operators, news broadcasts, social media, and information received from the state emergency operations center (SEOC) and county emergency operations centers (EOCs). Rumors and incomplete, inaccurate, or ambiguous information related to the emergency are addressed in press releases or at media briefings.

I.B. Location

There are two JICs for which the State of Wisconsin will staff in the event of a nuclear power plant incident. Procedures specific to each location appear separately within this document.

I.B.1. For incidents at NextEra Energy Point Beach Nuclear Plant (PBNP):

3060 Voyager Drive
Green Bay, WI 54311-8304

I.B.2. For incidents at Prairie Island Nuclear Plant (PINGP):

State of Minnesota
Homeland Security and Emergency Management
444 Cedar St., Suite 223
St. Paul, MN 55101

II. Policies

II.A. Activation

II.A.1. The SEOC is elevated and the JIC is activated when a utility declares an “Alert” Emergency Classification Level (ECL) or a higher classification.

a) For a “Notification of Unusual Event” (NUE) or a non-classifiable event, the SEOC may be elevated at the discretion of the WEM Administrator, Senior Duty Officer (SDO), or upon recommendation by the State Radiological Coordinator (SRC).

b) Generally, a JIC is not activated at a NUE.
II.A.2. As both JICs are a considerable distance from the SEOC, Public Information Officers (PIOs) representing the State of Wisconsin may be dispatched from other state departments that have regional offices located near the JICs. These PIOs will represent the State of Wisconsin, to include Department of Military Affairs (DMA)/Wisconsin Emergency Management (WEM).

II.A.3. Prior to JIC activation, or arrival of state representatives to the JIC, the lead PIO from WEM may issue press releases from the SEOC. Copies of any media releases issued prior to the JIC being staffed will be provided to other agencies at the JIC.

II.B. Procedures

II.B.1. The SEOC is staffed by the lead PIO and one or more assistant PIOs, who generate press releases.

II.B.2. Once written, press releases are approved by the Officer in Charge (OIC), who directs the activities in the SEOC.

   a) Upon approval, the press release is sent to state PIOs at the JIC for release to the media.

   b) Methods of conveyance of the press release (to the JIC) may be in the form of a fax, e-mail, or posting the document on a secured website.

   c) To facilitate rapid media notification, some press releases may be pre-scripted, and released from the SEOC prior to JIC activation or arrival of state representatives.

II.B.3. Detailed procedural checklists appear separately within a position binder that travels with the State of Wisconsin staff upon deployment to a JIC.

II.B.4. All members of the SEOC, JIC, telephone hotline, reception center, and shelter facilities have the responsibility for noting rumors or incomplete, inaccurate, or ambiguous information related to the emergency.

   a) Upon recognition of such information, the issue should be brought to the attention of the Lead Spokesperson at the JIC and the lead PIO at the SEOC.

   b) Action will be taken to address the rumor or trend through a media briefing, press release, or information provided to the hotline operators.

III. ESF Activities

The WERP Basic Plan defines standardized tasks that constitute the prevention, protection, mitigation, response, and recovery responsibilities of any agency that serves a role in emergency management. This section defines those activities that are unique to this annex, and is intended to be used in conjunction with the common tasks outlined in the Basic Plan.

III.A. Roles and Responsibilities

The State of Wisconsin will have a delegation to fulfill duties at the JIC. The roles of each position are described below. Depending upon the level of staffing, state representatives may assume one or more of these roles.

It is recognized that each JIC is owned and managed by entities other than the state, and that the operational activities of each may be slightly different. Regardless of location, the roles and
Responsibilities of staff from the State of Wisconsin will remain consistent. The positions described below reflect only the duties of state JIC staff.

### Table 1: JIC Position Functions

<table>
<thead>
<tr>
<th>Position</th>
<th>Functions</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Lead Spokesperson/PIO</strong></td>
<td>• This position serves as the overall coordinator/supervisor for State of Wisconsin staff located at the JIC.</td>
</tr>
<tr>
<td></td>
<td>• Contact will be maintained with the SEOC PIO throughout the duration of the elevation.</td>
</tr>
<tr>
<td></td>
<td>• S/he will coordinate messages with the utility, federal government, local, tribal government and adjacent states (if applicable) to emphasize joint agency decision-making.</td>
</tr>
<tr>
<td></td>
<td>• This individual will represent the state at media briefings held at the JIC.</td>
</tr>
<tr>
<td><strong>Assistant JIC PIO</strong></td>
<td>• This position will assist the Lead Spokesperson in carrying out his/her duties at the JIC.</td>
</tr>
<tr>
<td></td>
<td>• S/he will assist in maintaining contact with the PIOs at the SEOC and with the county PIOs at the JIC and media monitoring.</td>
</tr>
<tr>
<td></td>
<td>• There may be more than one assistant PIO serving at the JIC.</td>
</tr>
<tr>
<td></td>
<td>• Upon delegation by the Lead Spokesperson, s/he may be asked to represent the state at media briefings.</td>
</tr>
<tr>
<td><strong>Wisconsin Emergency Management Technical Advisor</strong></td>
<td>• This position assists the Lead Spokesperson and assistant JIC PIOs by providing technical information on the WERP, as well as general emergency management practices, procedures, and laws within the State of Wisconsin.</td>
</tr>
<tr>
<td></td>
<td>• S/he may also be called upon to assist with various administrative tasks, if necessary.</td>
</tr>
<tr>
<td><strong>Radiological Health Technical Advisor</strong></td>
<td>• This position assists the lead and assistant JIC PIOs by serving as a technical expert for public health matters as they relate to radiation exposure.</td>
</tr>
<tr>
<td></td>
<td>• S/he should have a working knowledge of the Wisconsin Department of Health Services’ (WI DHS) Radiological Incident Response Plan.</td>
</tr>
<tr>
<td></td>
<td>• This position also maintains contact with staff in the SRC room throughout the duration of the incident to obtain information on dose assessment, field monitoring, health monitoring and decontamination activities.</td>
</tr>
<tr>
<td></td>
<td>• This individual may participate in news conferences, at the request of the lead Spokesperson, to address media questions of a technical nature.</td>
</tr>
<tr>
<td><strong>Administrative Support</strong></td>
<td>• This position performs a variety of functions to assist the PIOs and technical advisors in carrying out their tasks.</td>
</tr>
<tr>
<td><strong>(working under various titles)</strong></td>
<td>• There may be various sub-categories of administrative support to include: Media Line Operator, Incident Management Support, and Administrative Support.</td>
</tr>
<tr>
<td></td>
<td>• Job duties may include clerical work, maintaining contact with the SEOC, ensuring distribution of state and county press releases, monitoring, and contributing to the Wisconsin emergency management software event site, working with Utility personnel at the JIC to assure good communications, or maintaining various call and message logs.</td>
</tr>
<tr>
<td><strong>WI Hotline Liaison at JIC</strong></td>
<td>• This position is responsible for communication and information flow between the JIC and the WI Hotline.</td>
</tr>
<tr>
<td></td>
<td>• This position must maintain contact with the designated JIC contacts and the WI Hotline Supervisor in order to facilitate accurate and timely communications and information exchange between the two facilities.</td>
</tr>
</tbody>

IV. Supporting Documents

IV.A. Attachments

IV.A.1. Appendix 1

Joint Information Center Policies and Procedures Specific to: NextEra Energy Point Beach

IV.A.2. Appendix 2

Joint Information Center Policies and Procedures Specific to: Prairie Island Nuclear Generating Plant
Joint Information Center Policies and Procedures Specific to:
NextEra Energy Point Beach
I. Concepts of Operations

Operations and procedures specific to incidents at NextEra Energy Point Beach (PBNP) are defined below. Position descriptions defined earlier in this document are in effect unless specifically noted.

I.A. Joint Information Center

The joint information center (JIC) for incidents at PBNP will be located at:

3060 Voyager Drive
Green Bay, WI 54311-8304

I.B. Activation

I.B.1. Employees from PBNP are responsible for activating the JIC.
I.B.2. PBNP will be responsible for providing the other participating federal, state, tribal, and local agencies with adequate work space, equipment, and communications capabilities to meet their needs.

I.C. Roles and Responsibilities

I.C.1. JIC Management Committee

a) Direction and decision-making regarding JIC operations are the responsibility of the JIC Management Committee.
b) The Committee will be a small group consisting of one representative from each of the following agencies:
   (1) State of Wisconsin
   (2) PBNP
   (3) Kewaunee County
   (4) Manitowoc County
   (5) Federal government (likely to be represented by the Nuclear Regulatory Commission (NRC) and Federal Emergency Management Agency (FEMA))
c) The Committee may expand its membership if a majority of the participating agencies agree.
d) The JIC Management Committee will:
   (1) Schedule media and pre-conference briefings
   (2) Determine briefing agendas and sequence of agenda items
   (3) Designate a moderator for each briefing (or electing a permanent moderator)
   (4) Identify any technical or subject-matter expert personnel who will participate in the briefing

I.C.2. Administrative Support
a) The State of Wisconsin will provide an administrative support position to answer the Media Hotline.

(1) This is a number designated for the media to contact, separate from the public hotline.

(2) Media calls of a generic nature will be answered by the operator with messages taken for calls that are specific to an agency or of a technical nature.

I.C.3. Utility Staff

a) Utility staff is responsible for liaison with the Public Inquiry Hotline.

b) Rumors or trends identified by hotline staff are passed on to the Utility Assistant Telephone Response Director, who then passes them to the state and county public information officers (PIOs) in the JIC.

c) Any resolution of trends or rumors by state and county PIOs are covered at media briefings, passed on to the appropriate emergency operations center (EOC), and shared with the Utility Assistant Telephone Response Director, to be passed on to the hotline operators.

I.D. Sequence of Events

I.D.1. Once media has arrived at the JIC, the first media briefing will be held.

a) Due to proximity, utility personnel will likely arrive before government personnel, and therefore the Lead PIO at the state emergency operations center (SEOC) will issue an initial notice (aka “First Advisory”) to the media of the incident.

b) This notice will be shared with all agencies represented at the JIC.

I.D.2. Once the JIC is fully staffed and prior to the media briefing, the Pre-conference briefing is held to determine the issues that spokespersons will address at the next media briefing.

a) The agenda and order of presentation for the media briefing should be established at this time.

I.D.3. During the media briefing, a moderator will introduce the presenters and establish a format.

a) Each presenter should speak for his/her allotted time with the most crucial information being presented first (i.e. any protective actions).

b) Media briefings should be held once an hour unless conditions warrant a more frequent interval.

I.D.4. Utility personnel are responsible for setting up media monitoring facilities.

a) Various media will be monitored, to include local and national television, radio, as well as social media (Twitter, Facebook, etc.).

b) Upon recognizing inaccurate or incomplete information in the media, monitoring personnel should notify the JIC Management Committee so that steps may be taken to address the issues at the next media briefing.
Joint Information Center Policies and Procedures Specific to:

Prairie Island Nuclear Generating Plant
Intentionally left blank
I. Concepts of Operations

Operations and procedures specific to incidents at the Prairie Island Nuclear Generating Plant (PINPG) are defined below. Position descriptions defined earlier in this document are in effect unless specifically noted.

A. Joint Information Center

The joint information center (JIC) for incidents at PINGP will be located at:

State of Minnesota
Homeland Security and Emergency Management (HSEM)
444 Cedar St., Suite 223
St. Paul, MN 55101

B. Activation

B.1. HSEM is responsible for activation and maintenance of the JIC.
B.2. Adequate work space, internet connectivity (wireless and wired), and landline telephones will be provided to staff from the State of Wisconsin.
B.3. The State of Wisconsin will supply its public information officers (PIOs) and support staff with laptops, cell phones, reference material, and stand-alone printers (if desired).
B.4. A public hotline center, also managed by HSEM, is located in close proximity to the JIC.
B.5. To assist in the response, the State of Wisconsin will provide a minimum of two telephone hotline operators, and provide information for all operators that briefly describe plans and procedures that are specific to Wisconsin.

C. Roles and Responsibilities

C.1. State of Minnesota
   a) In order to facilitate an efficient JIC and telephone hotline, the State of Minnesota provides training to all staff, including Wisconsin PIOs, support staff and hotline operators.
   b) Attendance at the biennial training (even years) by State of Wisconsin JIC personnel is mandatory.

C.2. JIC Coordinator
   a) The State of Minnesota’s JIC Coordinator is responsible for maintaining the JIC facilities.
   b) Minnesota’s Lead PIO is responsible for organizing JIC team meetings, which includes participation from the State of Wisconsin PIOs.
   c) Direction and decision-making regarding JIC operations are the responsibility of the JIC Management Committee. Membership of the committee includes “adjacent states involved in the disaster,” as defined in the State of Minnesota’s plan.
d) Spokespersons participating in the Minnesota JIC are expected to speak on behalf of the agency they represent and to confine their remarks to the specific actions being taken by that agency.

C.3. Wisconsin Lead PIO
   a) The Wisconsin Lead PIO at the JIC is responsible for the overall coordination and efforts by the State of Wisconsin staff at the Minnesota JIC, which includes arranging for 24-hour PIO coverage of the incident.
   b) She/he will represent Wisconsin at the JIC management meetings.
   c) Upon awareness of rumors or trends, she/he will work with the Minnesota Lead PIO and the Minnesota Assistant Operations Chief to ensure that rumor and trends are properly evaluated and resolved.

C.4. The Department of Military Affairs (DMA)/Wisconsin Emergency Management (WEM) Technical Advisor may be utilized by the State of Minnesota’s Operations Chief for the purposes of tracking down information specific to Wisconsin.

C.5. Detailed procedural checklists for each Wisconsin JIC staff member appear separately within a position binder that travels with the staff upon deployment to a JIC.
Letters of Agreement
I. Letters of Agreement

State Letters of Agreement (LOAs) are reviewed annually to verify their validity. The LOAs include details on what services will be provided and how the agreements will be activated and can be found in the Annual Letter of Certification (ALC).

I.A. Annual Letter of Certification

I. Introduction

I.A. General

I.A.1 Relationship to the Wisconsin Emergency Response Plan (WERP)

a) Severe Weather Incidents is an annex to the WERP.

b) This annex refers to Chapter 323 of the Wisconsin Statutes, Emergency Management, and:

(1) ESF 1, Transportation
(2) ESF 2, Communications and Warning
(3) ESF 3, Public Works and Engineering
(4) ESF 5, Emergency Management
(5) ESF 6, Mass Care, Emergency Assistance, Housing, and Human Services
(6) ESF 7, Resource Support
(7) ESF 9, Search and Rescue
(8) ESF 13, Public Safety and Security
(9) ESF 15, External Affairs
(10) WEM Duty Officer’s Manual
I.B. Strategy

This annex:

I.B.1 Is an element of a comprehensive planning strategy including local, county, and tribal emergency plans.

I.B.2 Creates a standardized state level response to severe weather incidents.

I.B.3 Complements existing local, county, tribal, and state emergency plans.

I.B.4 Establishes a flexible and scalable foundation for responding to events that overwhelm local capabilities.

I.B.5 Outlines the organization, responsibilities, operational concepts, and procedures specific to a state level response to a severe weather incident.

I.C. Scope

I.C.1 This plan applies to all municipalities, counties, and tribal areas in Wisconsin.

I.C.2 For the purposes of this plan:

a) A “severe weather incident” refers to a weather related incident that threatens, or causes disruptions to one or more of the following:

   (1) Public safety
   (2) State or regional economy
   (3) Governmental functions

b) “Localized” is used to describe an incident with the following characteristics:

   (1) Of short duration
   (2) Adversely affecting a small number of municipalities, tribes, or counties
   (3) That may cause:

       (a) Power outages
       (b) Evacuations
       (c) Transportation system disruptions that temporarily isolate an affected area and immobilize a population or limit the ability of the population to evacuate, or both
       (d) Other adverse consequences within a limited geographical area

c) Weather incidents that exceed these limits are covered by the WERP Catastrophic Incident Annex.

II. Assumptions

II.A. Severe Weather Types

The Wisconsin Threat and Hazard Identification and Risk Assessment (THIRA) an adjunct to the WERP and Appendix to the Wisconsin Hazard Mitigation Plan (WHMP), identifies 13 hazards that could plausibly occur in the state and would have a significant effect on the state.
Wisconsin Emergency Response Plan
Severe Weather Incidents

The THIRA includes an in-depth analysis for each of the identified threats and hazards. Severe weather types include:

II.A.1 Severe Weather
   Including tornadoes and high winds, hail, and lightning.

II.A.2 Flooding
   Including dam failure, landslide, and land subsidence.

II.A.3 Drought and extreme heat

II.A.4 Winter storms and extreme cold

II.B. Severe Weather Impacts

Severe weather may, in a relatively short period of time, create circumstances that threaten public safety by:

II.B.1 Overwhelming local, county, and tribal highway crews.

II.B.2 Overwhelming storm sewer and wastewater treatment facilities.

II.B.3 Impairing or make impassable ingress and egress routes from affected areas.

II.B.4 Displacing populations.
   a) Transportation resources such as roadways and bridges impairing or making impossible evacuation from, or emergency responder access to, affected areas.

II.C. Planning Assumptions

II.C.1 Severe weather events can occur during any season.

II.C.2 Severe weather usually occurs with some advance warning, however some incidents such as flash flooding may occur with very little or no warning.

II.C.3 Severe weather incidents may create significant numbers of people who are temporarily homeless and who require short-term sheltering or moderate-term temporary housing.

II.C.4 During a severe weather incident:
   a) A detailed and credible common operating picture may not be immediately available.
   b) Initial response activities may begin without complete situational awareness and before the full impact of the incident can be appreciated.
   c) Responding agencies must be flexible and scale their activities as the situation warrants.

II.C.5 ESF 5 governs coordination of state support to local jurisdictions during a severe weather incident.

II.C.6 Severe weather incidents involve responders from multiple public safety disciplines. In order to maintain situational awareness and a common operating picture, all responding units should have interoperable communications with the incident command post (ICP) in accordance with ESF 2.
II.C.7 The areas of the state most vulnerable to severe weather are places where people have insufficient shelter and may be difficult to reach with warning messages. Such areas include highways and outdoor places of assembly, such as:

a) Rural areas
b) Fairgrounds
c) Outdoor concert venues
d) Exhibit areas
e) Stadiums, amphitheaters, and other large sports and recreation facilities

II.C.8 Severe weather may directly impact populations in the short or long-term by damaging or destroying:

a) Homes
b) Businesses
c) Public facilities
d) Emergency response equipment and facilities

II.C.9 Severe weather may also indirectly impact populations by damaging or destroying critical infrastructure and key resources assets such as:

a) Hospitals and health care facilities
b) Energy generation or distribution facilities and equipment
c) Water and wastewater treatment facilities and equipment
d) Landline and wireless telecommunications facilities.
e) Internet and data hubs and facilities

III. Concept of Operations

III.A. Mitigation and Preparedness

III.A.1 Wisconsin Emergency Management conducts public weather awareness programs (e.g., Severe Weather Awareness Week, Winter Weather Awareness Week, Flooding Awareness Week, Excessive Heat Awareness campaign) through the following websites:

b) ReadyWisconsin website [http://ready.wi.gov]

III.A.2 WEM’s ReadyWisconsin initiative provides a website [http://ready.wi.gov] along with multiple modes of social media and printed, audio, and video materials containing information on public severe weather awareness throughout the year.

III.A.3 WEM can send weather-related public messages through ESF 2 via:

a) Radio and television stations through the Emergency Alert System (EAS).
III.B. Monitoring

III.B.1 The WEM Duty Officer (DO) monitors weather conditions across Wisconsin.

   a) The NWS offices serving Wisconsin provide WEM with early warning of potential, pending, or occurring severe weather.

   b) Emergency managers, volunteer SkyWarn weather observers, and the public report severe weather to the WEM duty officer (DO) through:

      (1) County, local, and tribal emergency managers or WEM regional directors

      (2) The 24-hour WEM 800.943.0003 telephone number.

III.B.2 The WEM DO Manual provides the WEM DO with standard operating guidelines and procedures to follow when severe weather occurs, threatens, or is predicted. They include:

   a) Procedures for webinars, conference calls, and other collaborative meetings intended to apprise state leadership, state agencies, and municipal, county, and tribal emergency managers of potential severe weather.

      (1) These collaborations are conducted by WEM, in partnership with NWS.

   b) Define the means of state agency notification of severe weather incidents in conjunction with individual agency plans unless the SEOC is mobilized.

III.C. Annex Activation

III.C.1 This annex can be activated by WEM management following:

   a) A county or tribal emergency manager who requests state level assistance because local resources are either overwhelmed or are threatened with becoming overwhelmed by current or developing severe weather conditions.

   b) A request by a WEM regional director who requests state level assistance because resources within his/her region are either overwhelmed or are threatened with becoming overwhelmed by current or developing severe weather conditions.

   c) Observed or predicted severe weather conditions in the state.

III.C.2 This annex can also be activated:

   a) At the direction of the WEM senior duty officer (SDO) who then notifies the WEM administrator, the adjutant general, and the governor’s office.

   b) At the direction of the WEM administrator who then notifies the adjutant general, and the governor’s office.

   c) At the direction of the adjutant general who then notifies the governor’s office.

   d) At the direction of the governor through a declaration of a state of emergency.

      (1) A governor’s declaration of a state of emergency (§ 323.10 of the Wisconsin Statutes) may mobilize members of the Department of Military Affairs (DMA)/Wisconsin National Guard (WING) to assist with response or help with damage assessment resulting from a severe weather incident.

III.C.3 Legal issues arising from activation or execution of this plan are referred to the DMA general counsel.
III.D. SEOC Elevation

III.D.1 WEM management may direct that the SEOC mobilize in response to severe weather that results in:
   a) Evacuations in three or more counties.
   b) Shelters opening in three or more counties.
   c) Closure of state or federal highways.
   d) Potential or actual impacts to critical infrastructure.
   e) Requests for significant quantities of response resources.
   f) Involvement of two or more state agencies.
   g) Potential or actual extensive or prolonged utility outages.

III.D.2 The SEOC communicates with the public through ESF 15.
   a) The DMA Public Affairs Office (PAO) produces information for print and broadcast media, social media, and direct outreach to non-government organization partners who can support communications to individuals with functional needs.

IV. Agency Activities

IV.A. Wisconsin Department of Transportation

WisDOT has overall responsibility for maintenance of state and federal highways in Wisconsin.

IV.A.1 WisDOT contracts with counties and tribes for highway maintenance equipment and personnel resources for the maintenance of state and federal highways.
   a) WisDOT does not maintain significant highway maintenance equipment and personnel resources.

IV.A.2 The Traffic Management Center (TMC) monitors the condition of state highways throughout Wisconsin using:
   a) A network of traffic cameras, and
   b) Field reports from WSP, various municipal, county, and tribal agencies and reports from the public.

IV.A.3 The TMC analyzes data from these inputs to produce reports on highway impairments which are distributed through:
   a) Email bulletins, and
   b) Interactive map available to the public through the 511 website (http://www.511wi.gov).

IV.B. Municipal, County, and Tribal Jurisdictions

IV.B.1 Wisconsin is a home rule state.
   a) As required by § 323.14(1) of the Wisconsin Statutes, counties, cities, villages, and towns are required to develop emergency management plans compatible with state plans. These emergency management plans should:
(1) Include planning to preposition highway maintenance resources when a severe weather event is imminent. Prepositioning resources decreases the time necessary to deploy when conditions warrant. Note: A “highway” means any public way or thoroughfare.

(2) Establish trigger points at which, even with mutual aid resources, highways cannot be kept in safe operational condition. When these trigger points are reached, plans should authorize one or more county officials to:

(a) Contact the appropriate WEM regional director to request assistance in keeping highways in a safe condition.

(b) Contact the TMC to request additional assistance or to declare a road, highway, or a portion of a highway closed. Note: A county sheriff can close roads in his/her respective county including that portion of the interstate in the county.

(3) Meet the standards of the Americans with Disabilities Act (ADA) (42 U.S.C. §§12101-12213) and other disability rights laws for physical, programmatic, and communications access (e.g. preparedness, warnings/notifications, evacuations, sheltering, temporary/interim housing).

b) Pursuant to §323.14(4) of the Wisconsin statutes, counties, cities, villages, and towns have the authority and the responsibility to preserve public safety. Counties and local units of governments are required to have plans, compatible with this plan, to:

(1) Rescue persons imperiled by a severe weather incident and move them to a place of safety. Such plans must take into account the needs of persons who are not capable of self-rescue in accordance with ESF 1, ESF 13, and ESF 9.

(c) Provide appropriate shelter and/or temporary housing as necessary until such time as the emergency has passed and normal conditions are restored in accordance with ESF 6. Such shelters and/or temporary housing must take into account the needs of persons with access and functional needs (see glossary) impairing their use of shelter and/or temporary housing facilities. Federally recognized tribes are considered sovereign nations who have the authority and the responsibility to preserve public safety on tribal land

IV.B.2 Municipal, County, and Tribal highway department mutual aid:

a) Jurisdictions are encouraged to enter into mutual aid compacts with adjoining jurisdictions to share highway maintenance resources to increase capability to maintain highways in a safe operational condition.

b) Jurisdictions can reasonably determine mutual aid trigger points based on the number of trucks, drivers, maintenance personnel, and maintenance facilities, at which they may not be able to maintain highways in a safe operational condition because resources will be exhausted or overwhelmed.

c) Consistent with standard mutual aid plans, mutual aid resources respond only upon request.

(1) When requested, all mutual aid resources operate under the direction of the incident commander through the incident command system.

IV.B.3 Incident responders of all disciplines should have common communications means in accordance with ESF 2.
Wisconsin Emergency Response Plan
Severe Weather Incidents

a) Interoperable communications should allow all responders to communicate with each other, with incident command posts, jurisdictional EOCs, or responsible public safety communications centers.

b) Interoperable communications is a matter of responder safety, maintenance of situational awareness, and a common operating picture.

IV.B.4 Declaration of Emergency

a) County or municipal declaration of a state of emergency. § 323.110 of the Wisconsin statutes allows any local unit of government to declare an emergency for a disaster or the imminent threat of a disaster that impairs transportation, food or fuel supplies, medical care, fire, health, or police protection or other critical governmental systems for the duration of the emergency.

b) Tribes have the authority to declare an emergency as sovereign nations.

I.H. Winter Weather Related Products
Intentionally left blank
I. National Weather Service Products

Each National Weather Service (NWS) Forecast Office issues some or all of the following weather related products as conditions warrant. NWS local offices often collaborate with local partners to determine when an alert should be issued for a local area. Products may be issued as a statement, advisory, watch, or warning.

I.A. General Weather Products

The following are descriptions of commonly used general weather products.

Hazardous Weather Outlook
The Hazardous Weather Outlook is a single source of information regarding expected hazardous weather through seven days. It can include information on severe storms, heavy rain, flooding, tropical storms, winter weather, high winds, fire weather, and marine hazards.

Special Weather Statement
Special Weather Statements provide the public with information concerning ongoing or imminent weather hazards, which require a heightened level of awareness or action, but do not rise to the level of watch, warning, or advisory.

I.B. Extreme Cold Related Products

The following are descriptions of commonly used extreme cold related products.

Frost Advisory
A frost advisory means areas of frost are expected or occurring, posing a threat to sensitive vegetation.

Freeze Watch
Issued when there is a potential for significant, widespread freezing temperatures within the next 24-36 hours. A freeze watch is issued in the autumn until the end of the growing season and in the spring at the start of the growing season.

Freeze Warning
Issued when temperatures are forecasted to go below 32°F for a long period of time. This temperature threshold kills some types of commercial crops and residential plants.

Hard Freeze Warning
Issued when temperatures are expected to drop below 28°F for an extended period of time, killing most types of commercial crops and residential plants.

Wind Chill Advisory
Issued when seasonably cold wind chill values but not extremely cold values are expected or occurring.

Wind Chill Watch
Issued when dangerously cold wind chill values are possible.

Wind Chill Warning
Issued when dangerously cold wind chill values are expected or occurring.

I.C. Flood Related Products

The following are descriptions of commonly used flood related products.
Hydrologic Outlook
Two Types:

1. Short-term (1 to 7 days) Hydrological Outlooks can be issued to alert the public of the potential for flooding in the near-term such as when heavy rainfall is forecast that could result in flooding or aggravate an existing flood if it occurs.

2. Long-term (weeks to months) Hydrological Outlooks may also provide river or reservoir level and/or flow information. This information could be used for water supply concerns or projection of snowmelt flooding.

Coastal/Lakeshore Hazardous Message
Coastal/Lakeshore Hazard Message products provide the public with detailed information on significant coastal/lakeshore events. Coastal/Lakeshore events impact land-based and near shore interests along much of the United States coastline. This product can be issued as a watch, warning, or advisory and follows the same “Be Aware, Be Prepared, Take Action” definitions as with other NWS watch, warning, or advisory products.

A Watch is issued when flooding with significant impacts is possible.

Warnings are issued when flooding posing a serious threat to life and property is occurring, imminent, or highly likely.

Flood Watch
A Flood Watch is issued to indicate current or developing conditions that are favorable for flooding. The occurrence is neither certain nor imminent. A watch is typically issued within several hours to days ahead of the onset of possible flooding. In situations where a river or stream is expected to be the main source of the flooding, forecast confidence may allow for a Flood Watch to be issued several days in advance.

Flash Flood Watch
A Flash Flood Watch is issued to indicate current or developing conditions that are favorable for flash flooding. The occurrence is neither certain nor imminent. A watch is typically issued within several hours to days ahead of the onset of possible flash flooding.

Flood Advisory
A Flood Advisory is issued when a flood event warrants notification but is less urgent than a warning. Advisories are issued for conditions that could cause a significant inconvenience, and if caution is not exercised, could lead to situations that may threaten life, property, or both.

Flood Warning
A Flood Warning is issued to inform the public of flooding that poses a serious threat to life, property, or both. A Flood Warning may be issued hours to days in advance of the onset of flooding based on forecast conditions. Floods occurring along a river usually contain river stage (level) forecasts.

Flash Flood Warning
A Flash Flood Warning is issued to inform the public, emergency management, and other cooperating agencies that flash flooding is in progress, imminent, or highly likely. Flash Flood Warnings are urgent messages as dangerous flooding can develop very rapidly, with serious threat to life, property, or both. Flash Flood Warnings are usually issued minutes to hours in advance of the onset of flooding.

I.D. Heat Related Products
The following are descriptions of commonly used heat related products.
**Wisconsin Emergency Response Plan**

**Emergency Conditions/Action Levels**

Excessive Heat Outlook
Issued when the potential exists for an excessive heat event in the next three to seven days. An Outlook provides information to those who need considerable lead-time to prepare for the event.

Excessive Heat Watches
Heat Watches are issued when conditions are favorable for an excessive heat event in the next 24 to 72 hours. A Heat Watch is used when the risk of a heat wave has increase but its occurrence and timing is still uncertain.

Heat Advisory
A Heat Advisory is issued within 12 hours of the onset of extremely dangerous heat conditions. The general rule of thumb for a Heat Advisory is when the maximum heat index temperature is expected to be 100 degrees or higher for at least two days, and night time air temperatures will not drop below 75 degrees; however, these criteria vary across the country, especially for areas that are not used to dangerous heat conditions.

Excessive Heat Warning
An Excessive Heat Warning is issued with 12 hours of the onset of extremely dangerous heat conditions. The general rule of thumb for an Excessive Heat Warning is when the maximum heat index temperature is expected to be 105 degrees or higher for at least two days and night time air temperatures will not drop below 75 degrees; however, these criteria vary across the country, especially for areas not used to extreme heat conditions.

I.E. Marine Related Products
The following are descriptions of commonly used marine related products.

Marine Watch
Issued when conditions are favorable for a specific hazardous weather event to occur.

Marine Warning
Issued when dangerous conditions are imminent or occurring.

I.F. Severe Thunderstorm Related Products
The following are descriptions of commonly used severe thunderstorm related products.

Severe Thunderstorm Watch
Severe thunderstorms are possible in and near the watch area. Winds 58 mph or higher or hail 1 inch or larger, or both, are possible. A Severe Thunderstorm watch area is typically large, covering numerous counties or even states.

Severe Thunderstorm Warning
Severe weather has been reported by spotters or indicated by radar or is imminent in the warning area. Warnings indicate imminent danger to life and property. Severe thunderstorms have winds 58 mph or higher or hail 1 inch or larger, or both. Warnings typically encompass a much smaller area (around the size of a city or small county) that may be impacted by a large hail or damaging wind identified by an NWS forecaster on radar or by a trained spotter/law enforcement who is watching the storm.

I.G. Tornado Related Products
The following are descriptions of commonly used tornado related products.

Tornado Watch
Tornadoes are possible in and near the watch area. Watches are issued by the Storm Prediction Center for counties where tornadoes may occur. The watch area is typically large, covering numerous counties or even states.

**Tornado Warning**  
A tornado has been sighted or indicated by weather radar. There is imminent danger to life and property. Warnings typically encompass a much smaller area (around the size of a city or small county) that may be impacted by a tornado identified by a forecaster on Radar or by a trained spotter/law enforcement who is watching the storm.

**I.H. Winter Weather Related Products**
The following are descriptions of commonly used winter weather related products.

**Blizzard Watches**  
Issued when there is a potential for falling or blowing snow, or both, with strong winds and extremely poor visibilities. This can lead to whiteout conditions and make travel very dangerous.

**Lake Effect Snow Watches**  
Issued when conditions are favorable for a lake effect snow event. A potential exists for heavy accumulation of lake effect snow. Travel and commerce may be significantly affected.

**Wind Chill Watches**  
Issued when there is the potential for a combination of extremely cold air and strong winds to create dangerously low wind chill values. See the NWS Wind Chill Chart.

**Winter Storm Watches**  
Issued when conditions are favorable for a significant winter storm event (i.e., heavy sleet, heavy snow, ice storm, heavy snow and blowing snow or a combination of events).

**Freezing Rain Advisories**  
Issued when light ice accumulation (freezing rain and/or freezing drizzle) is expected but will not reach warning criteria. Expect a glaze on roads resulting in hazardous travel.

**Lake Effect Snow Advisory**  
Issued for widespread or localized lake effect snowfall accumulation (and blowing snow) remaining below warning criteria. Expects lake effect snow showers and assume travel will be difficult in some areas. Some localized snow bands will be intense enough to produce several inches in a few areas with sudden restrictions in visibility.

**Wind Chill Advisories**  
Issued when low wind chill temperatures are expected but will not reach local warning criteria. Extremely cold air and strong winds will combine to generate low wind chill readings. Take precautions against frostbite and hypothermia. See the NWS Wind Chill Chart.

**Winter Weather Advisories**  
Issued when snow, blowing snow, ice, sleet, or a combination of these wintry elements are expected but conditions should not be hazardous enough to meet warning criteria. Be prepared for winter driving conditions and possible travel difficulties. Use caution when driving.

**Blizzard Warnings**  
Issued for frequent gusts greater than or equal to 35 mph accompanied by falling and/or blowing snow, frequently reducing visibility to less than 1/4 mile for three hours or more. A Blizzard Warning means severe winter weather conditions are expected or occurring. Falling
and blowing snow with strong winds and poor visibilities are likely, leading to whiteout conditions making travel extremely difficult. Do not travel. If you must travel, have a winter survival kit with you. If you get stranded, stay with your vehicle and wait for help to arrive.

**Ice Storm Warnings**

Usually issued for ice accumulation of around 1/4 inch or more. This amount of ice accumulation will make travel dangerous or impossible and likely lead to snapped power lines and falling tree branches. Travel is strongly discouraged.

**Lake Effect Snow Warnings**

Issued when widespread or localized lake induced snow squalls or heavy showers are expected to produce significant snowfall accumulation. Lake effect snow usually develops in narrow bands and impacts a limited area. These bands can produce very heavy snow with sudden restrictions in visibility. Driving conditions may become hazardous at times.

**Wind Chill Warning**

Issued for a combination of very cold air and strong winds that will create dangerously low wind chill values. This level of wind chill will result in frostbite and lead to hypothermia if precautions are not taken. Avoid going outdoors and wear warm protective clothing if you must venture outside. See the NWS Wind Chill Chart.

**Winter Storm Warnings**

Issued for a significant winter weather event including snow, ice, sleet or blowing snow or a combination of these hazards. Travel will become difficult or impossible in some situations. Delay your travel plans until conditions improve.

WisDOT Roadway Condition Terminology

Wisconsin Emergency Response Plan
WisDOT Roadway Condition Terminology

Attachment 2

Severe Weather
Intentionally left blank
I. WisDOT Winter Weather Roadway Definitions

18-Hour Service Roadways
When conditions warrant, coverage should be provided up to 18 hours per day during the storm. The gap in coverage is necessary to provide for operator recovery time. The operator recovery time should typically be between the hours of 10:00 p.m. and 4:00 a.m., but will vary with specific storm conditions. Some minimal ability to respond to emergencies should be provided during the hours that full coverage is not provided. Typically, a plow operator’s time should not exceed a continuous 18-hour shift. Cycle times for each route should generally not exceed 2 ½ to 3 hours.

24-Hour Service Roadways
The county has a presence on the highway for 24 hours per day during a winter storm event unless passable roadway conditions have been achieved. This would only happen during winter storm events of long duration and when conditions warrant. When this does occur it may mean further reducing the coverage on routes in the “all other” classification to assure available manpower, or extending the winter operation section lengths on the high volume routes. However, continuous coverage does not mean that the county runs three shifts or that there are patrol trucks on the highway 24 hours per day throughout the winter irrespective of the weather conditions.

All Other Highway Classification
Include all those highways not identified as high volume. When conditions warrant, coverage should be provided up to 18 hours per day during the storm.

High Volume Highway Classification
Typically include highways with four or more lanes for through traffic and selected two-lane highways. When determining the need for providing high volume coverage on two-lane highways, the following should be considered:

- Functional classification
- High traffic volumes
- Special service factors
- Planned conversion from two-lane to multi-lane facility

When conditions warrant, 24-hour coverage should be provided during a winter storm.

Passable Roadway
A roadway surface that is free from drifts, snow ridges, and as much ice and snow pack as is practical and can be traveled safely at reasonable speeds. A passable roadway should not be confused with "dry pavement" or "bare pavement", which is essentially free of all ice, snow, and any free moisture from shoulder to shoulder. This "dry/bare pavement" condition may not exist until the weather conditions improve to the point where this pavement condition can be provided.

Reasonable Speed
Is considered a speed that a vehicle can travel without losing traction. During and immediately after a winter storm event, a reasonable speed will most likely be lower than the posted speed limit. Motorists can expect some inconvenience and will be expected to modify their driving practices to suit road conditions.

I. Introduction

I.A. Purpose

An act of terrorism in the State of Wisconsin or the region, either foreign or domestic, may produce consequences that will quickly overwhelm the capabilities of local governmental units or the state and present a unique set of circumstances not found in other disasters. This annex is to support an effective, systematic, timely, and coordinated response by state agencies, in particular, as well as law enforcement and criminal justice agencies, in terrorist incidents and threats.

This annex presents an overview of the terrorism-related hazards that could occur in the state. It provides an outline of the concept of operations that may be used and the assignment of responsibilities for a terrorism incident.

I.B. Scope

This annex provides planning guidance and outlines operational concepts for the law enforcement and investigative response to a threatened or actual terrorism incident within the state.
Specific capabilities unique to the *Terrorism Incident Law Enforcement and Investigation Annex* are:

I.B.1. It acknowledges and outlines the unique nature of each threat or incident along with the capabilities and responsibilities of the various state agencies as well as the local and tribal units of government, primarily regarding the law enforcement and investigative activities.

I.B.2. A terrorism incident may occur at any time, with little or no warning, affecting single or multiple geographic areas and may result in mass casualties.

I.B.3. Response to a terrorism incident will have the following operational priorities in the following:
   a) Protection of life
   b) Stabilization of the incident
   c) Security of critical infrastructure
   d) Restoration of property and the environment

I.B.4. Establish the necessary command and control organization involving all necessary agencies working under a unified command structure.

I.B.5. Responding to an act of terrorism requires an extraordinary level of coordination of the law enforcement response, criminal investigation, on-going security, emergency management, and technical expertise across all levels of government.

I.B.6. Intelligence information sharing and dissemination is to facilitate the distribution of relevant, actionable, timely information related to terrorism or other major criminal activities to the necessary parties. This is commonly done through the fusion centers in the state.

I.B.7. Recognize the indicators and warnings within the gathered data of potential trends, indications, or warnings of criminal or terrorist activities against U.S. citizens, government entities, and critical infrastructure.

I.B.8. Specialized resources may be required to deal with incidents involving weapons of mass destruction (WMD).

I.C. Policies

I.C.1. The HSC, with the assistance of the fusion centers, develops goals and strategies for Wisconsin’s protection. Implementation of these goals and strategies is accomplished through the local, tribal, state, and federal agencies in Wisconsin.

I.C.2. Homeland Security Presidential Directive 5 (HSPD-5) gives the lead responsibility for criminal investigation of terrorist acts or threats to the U.S. attorney general. The attorney general has designated the FBI as the lead agency in the investigation of terrorist acts or threats.

I.C.3. The policies used in a terrorism incident and this annex are found in the Wisconsin Emergency Response Plan (WERP), Basic Plan, Section III – Policies.
II. Planning Assumptions

II.A. Assumptions

II.A.1. All communities are vulnerable to a terrorism threat or incident, which may occur at any time with little or no warning. It may involve single or multiple geographic areas and result in mass casualties.

II.A.2. A large-scale terrorism incident that requires a significant state and federal response may not be supported in the first few hours. It may take from 12 to 72 hours to deploy federal and other large-scale resources.

II.A.3. A major terrorism incident may create such a large-scale disaster that federal assistance is needed and the activation of the National Response Framework (NRF) by the president.

II.A.4. Depending upon the incident type or WMD, there may be specialized medical treatment needed requiring transportation to distant medical facilities or establishment of temporary medical facilities in the field. Injuries may be both physical and psychological.

II.A.5. Issues will involve the preservation of evidence and the possible contamination of victims.

II.A.6. If there are mass fatalities, special mortuary arrangements are likely to be necessary.

II.A.7. In a terrorism incident, secondary or subsequent attacks are likely and must be considered by all responders as they may be targeted. Terrorists may use diversionary tactics to draw first responders away from or slow the response to the main target.

II.A.8. Law enforcement officials will evaluate all threats to determine the validity or credibility of the threat.

II.A.9. Terrorism incidents may involve damage or disruption to computer and communications systems. The incident may also involve attacks to critical infrastructure and key resources (CIKR) facilities, utilities, and transportation systems that will limit the emergency response operations.

II.A.10. If the terrorism incident is a biological or WMD attack, the agent or device may be geographically dispersed without a defined incident site. The response will involve personnel with the appropriate personal protective equipment and specialized equipment. The agent used in the attack may be contagious or require quarantine by health officials. The symptoms from exposure to such an attack may not exhibit for some time.

II.A.11. The suspected or actual involvement of terrorists may complicate the incident management. Therefore, the establishment of a traditional incident command system (ICS) and its components may not be feasible.

III. Concept of Operations

III.A. General

The WERP provides a template for state incident operations. Local agencies provide the initial response to an incident. Certain federal agencies will automatically deploy to a terrorism
incident while state agencies respond at the request of the local unit of government and assist with the local response through the Incident Command System (ICS).

Local units of government, county, tribal, state, and federal agencies will use established procedures for managing the incident. The response operation will give consideration and be guided by the following:

III.A.1. Preserving life, health, and safety of victims and responders

III.A.2. Prevention of further injury or damage including providing accurate public information and crisis communications

III.A.3. Preventing the terrorism threat from being carried out or an existing terrorism incident from expanding

III.A.4. Law enforcement activities including, but not limited to, crime scene management, incident investigation, the collection and preservation of evidence, maintenance of public order, patrolling dangerous areas, guarding property and directing traffic

III.A.5. Locating and rendering safe any WMD including their containment, recovery, and disposal

III.A.6. A large-scale rescue, fire suppression, and hazardous materials (Hazmat) response

III.A.7. Evacuation and any necessary sheltering along with the procurement and distribution of necessities for victims

III.A.8. Restoration and maintenance of essential community services (e.g. CIKR)

III.A.9. Protection of the environment

During the recovery phase, all agencies are expected to support continuing operations with equipment and staff.

III.B. Definitions

III.B.1. International Terrorism

Defined in Title 18 U.S.C., Chapter 113B, Section 2331 as activities that:

a) Involve violent acts or acts dangerous to human life that are a violation of the criminal laws of the United States or of any State, or that would be a criminal violation if committed within the jurisdiction of the United States or of any State;

b) Appear to be intended:

   (1) To intimidate or coerce a civilian population;

   (2) To influence the policy of a government by intimidation or coercion; or

   (3) To affect the conduct of a government by mass destruction, assassination, or kidnapping; and

   c) Occur primarily outside the territorial jurisdiction of the United States, or transcend national boundaries in terms of the means by which they are accomplished, the persons they appear intended to intimidate or coerce, or the locale in which their perpetrators operate or seek asylum.

III.B.2. Domestic Terrorism

Defined in Title 18 U.S.C., Chapter 113B, Section 2331 as activities that:
a) Involve acts dangerous to human life that are a violation of the criminal laws of the United States or of any State;

b) Appear to be intended:

   (1) To intimidate or coerce a civilian population;
   (2) To influence the policy of a government by intimidation or coercion; or
   (3) To affect the conduct of a government by mass destruction, assassination, or kidnapping; and

c) Occur primarily within the territorial jurisdiction of the United States.

III.B.3. Weapon of Mass Destruction

Defined in Title 18 U.S.C., Chapter 113B, Section 2332a as:

a) Any destructive device as defined in section 921 of this title (i.e. explosive devices);

b) Any weapon that is designed or intended to cause death or serious bodily injury through the release, dissemination, or impact of toxic or poisonous chemicals, or their precursors;

c) Any weapon involving a biological agent, toxin, or vector; or

d) Any weapon that is designed to release radiation or radioactivity at a level dangerous to human life.

III.C. National Terrorism Advisory System (NTAS)

In 2011 the U.S. Department of of Homeland Security (U.S. DHS) established the National Terrorism Advisory System (NTAS). The NTAS replaced the color-coded Homeland Security Advisory System (HSAS) and is designed to more effectively communicate information about terrorist threats by providing timely, detailed information to the American public.
The NTAS consists of two types of advisories:

III.C.1. Bulletins

NTAS Bulletins communicate current developments or general trends regarding threats of terrorism.

a) Permit the U.S. DHS Secretary to communicate critical terrorism information that, while not necessarily indicative of a specific threat against the United States, can reach homeland security partners or the public quickly, thereby allowing recipients to implement necessary protective measures.

b) Provide the U.S. DHS Secretary with greater flexibility to provide timely information to stakeholders and members of the public.

III.C.2. Alert

NTAS Alerts share specific, credible information about a terrorist threat against the United States with the American public when circumstances warrant doing so. Alerts may take one of two forms:

a) Elevated

If there is credible threat information, but only general information about timing and target such that it is reasonable to recommend implementation of protective measures to thwart or mitigate against an attack.

b) Imminent

If the threat is credible, specific, and impending in the very near term.
U.S. DHS will announce advisories publicly. All advisories will be simultaneously posted on DHS.gov, and released to the media for distribution. U.S. DHS will also distribute advisories across its social media channels, including Twitter and Facebook.

NTAS advisories (Bulletins or Alerts) encourage individuals to follow the guidance provided by local and state officials and to report suspicious activity. Where possible and applicable, NTAS advisories will include steps that individuals and communities can take to protect themselves from the threat as well as help detect or prevent an attack before it happens.

III.D. Situations

III.D.1. Local units of government have the primary authority to respond to and recover from the consequences of terrorism. State government will respond in support of local and tribal units of government agencies. Incidents on state, tribal, and federal property will be coordinated between local, tribal, state, and federal agencies, as appropriate.

III.D.2. There are five categories of WMD incidents. These are: chemical, biological, radiological, nuclear, and high-yield explosives (CBRNE) with injury coming from inhalation, absorption, ingestion, or injection of contaminants. The impact to the public is intensified by the inability to quickly identify or contain the effects of a biological or chemical agent.

III.E. Intelligence Management

III.E.1. An important and unique capability in the terrorism annex is the collection, analysis, archiving, and dissemination of intelligence related to a terrorist threat, special event, or incident.

III.E.2. Multidiscipline intelligence units will most likely need to be organized. This unit will disseminate information between the various operations centers and coordination groups.

III.E.3. The unit is responsible to prepare briefings and reports concerning the status of the incident.

III.E.4. It is understood that intelligence received regarding terrorism may not be able to be released to all of the emergency management and response individuals involved in the incident.

III.F. Mobilization Triggers

III.F.1. The size or complexity of the incident exceeds the capabilities that are brought to bear with available resources.

III.F.2. The local authorities request state assistance or are unable to provide an adequate response nor have the resources for an incident of such magnitude within their jurisdiction.

III.F.3. An Imminent Threat advisory is issued by U.S. DHS for Wisconsin or the immediate region.

III.F.4. A terrorism incident of significance has occurred in a neighboring state or another area of the United States that may have the potential to involve the State of Wisconsin.

III.F.5. Readiness levels for the state and the state emergency operations center (SEOC) are decided based on the terrorism threat. The readiness level will correspond to the
current SEOC operational levels. Operational levels range from the lowest (Level 5), described as steady-state operation of DMA/WEM, to the highest (Level 1), representing full-scale operation of the SEOC.

III.G. Organization

III.G.1. The HSPD-5 which is the management of domestic incidents states, “The attorney general has lead responsibility for criminal investigations of terrorist acts or terrorist threats by individuals or groups inside the United States, or directed at U.S. citizens or institutions abroad...Generally acting through the Federal Bureau of Investigation, the attorney general, in cooperation with other federal departments and agencies engaged in activities to protect our national security, shall also coordinate the activities of the other members of the law enforcement community to detect, prevent, preempt, and disrupt terrorist attacks against the United States.”

III.G.2. WI DOJ is the lead coordinating agency for the State of Wisconsin in a terrorism incident and will establish a command structure in cooperation with the federal response agencies.

III.G.3. The federal command structures are found in the National Response Framework, Terrorism Incident Law Enforcement and Investigation Annex. They include:
   a) FBI command post
   b) Federal or FEMA joint operations center
   c) On-scene coordination and unified command

III.H. Consequence Management

III.H.1. There may be established a consequence management group from the joint operations center (JOC) that consists of representatives of agencies that will provide focused expertise in support of law enforcement agencies responsible for response and recovery efforts.

III.H.2. It may be necessary to restrict the dissemination of some of the information due to the sensitivity, sources, and methods to obtain the information to certain emergency management and other agencies. Information will be released to those who have a “need to know.”

III.H.3. Consequence management activities and those involved will participate in the incident command or SEOC operations.

III.H.4. A joint information center (JIC) will be staffed by the necessary agency representatives so that information that is collected, validated, and approved can be released to the public.

III.I. Annex Activities

A terrorism incident may be of such a large scale as to be considered a catastrophic incident. A catastrophic incident is usually of such a large scale that all ESFs found in both the WERP and the NRF ESFs will be referred to in the incident. ESF and agency responsibilities in a catastrophic incident are found in the WERP, Catastrophic Incident Annex, Section III., III.F. Annex activities.
IV. Agency Responsibilities

The WERP Basic Plan defines standardized tasks that constitute the prevention, protection, mitigation, response, and recovery responsibilities of any agency that serves a role in emergency management. The following defines those responsibilities that are unique to terrorism incidents, and is intended to be used in conjunction with the common tasks outlined in the Basic Plan.

IV.A. Local Role

<table>

<th>Agency</th>
<th>Functions</th>
</tr>
</thead>
</table>
| Wisconsin Department of Justice (Lead Agency) | **Response**  
Agency functions as found in ESFs 2, 3, 5, 10, and 13. Specifically:  
- The FBI investigates crimes that are statewide in nature or importance. Agents work closely with local and federal officials to investigate and prosecute crimes involving homicide, arson, financial crimes, illegal gaming, computer crimes, drug trafficking, government corruption, and terrorism.  
- State crime labs and evidence technicians for response and technical assistance  
- The state designated primary intelligence fusion center, WSIC is owned and operated by the Wisconsin Department of Justice (WI DOJ)/Division of Criminal Investigation (DCI).  
  - Tasked as the primary intelligence and information gathering and sharing entity for the state in dealing with matters of national security, terrorism, crime, as well as natural, technological, and human-caused threats or disasters.  
  - Works with integrated partners and the US DHS to coordinate the handling of national security information for briefings to the governor, attorney general, adjutant general (homeland security advisor), and other key officials.  
  - Coordinates the deployment of the mobile support unit (MSU), to support local, tribal, and state operations at major incidents, crime scenes, as well as natural, technological, and human-caused disasters.  
- Gather evidence, intelligence, information, and assist with the investigation of crime scenes, as needed.  
- Provide major case support in the form of telephone and recorded call analysis, computer analysis, and installation of sophisticated electronic devices used in criminal investigations.  
- Provide staff for the JIC and field operations as requested.  
- Provide legal resources to establish quarantine authority, if necessary. |
|        | **Resources**  
- Coordination between WSIC, STAC, and JTTF  
- DCI investigative personnel and staff to assist in investigative matters.  
- Crime lab and field response team: provides technical support and services for the inspection of evidence recovered during a criminal investigation.  
- DCI tactical response team  
- State fire marshals if required  
- Wisconsin TIME System: provides communications and support to law enforcement personnel.  
- Assistant attorney generals: provide support to county corporation counsel and related legal issues.  
- Criminal analysts to assist investigators, managers, and command staff on scene or remotely with information and intelligence analysis and dissemination  
- MSU to support local and state operations at major incidents, crime scenes, as well as natural, technological, and human-caused disasters  
- Wisconsin Crime Alert Network  
- Threat/fusion officers relationship with nearly 800 trained “first preventers” throughout the state |
IV.C. Wisconsin Governmental Support Agencies

The WERP Basic Plan outlines other state agency responsibilities. Each agency has the responsibility of implementing their individual agency plan and standard operating procedures.

The following state agencies have a specific role and responsibility in a terrorism incident. This listing also identifies some of the WMD resources available through the agency. However, the level and extent of the response may depend upon a declaration of a state of emergency by the governor. All state agencies will continue supporting local efforts to the extent possible during the recovery phase of the incident.

Table 4: State Government Support Agencies Functions

| **Department of Natural Resources** | **Response**
Agency functions as found in ESFs 2, 3, 4, 5, 7, 8, 9, 10, 11, 12, 13, 14, and 15. Specifically:
- Assist with determining priorities for initial response to terrorism incidents that involve WMD.
- Provide technical advice to first responders and emergency management personnel.
- Air, water, and waste treatment monitoring.
- Participate on the federal regional response team (RRT) for hazardous substance response and CBRNE.
- Assist with the assessment and coordination of debris and waste disposal.
- Activate additional resources as needed.
- Provide air and water monitoring as well as soil sampling.
- Provide support to local law enforcement as requested:
  - Security at public sites by request of executive order or assist at request of local law enforcement (e.g. shelters, hospitals, temporary morgue, JIC)

**Resources**
- Wardens and certified law enforcement officers
- Spill coordinators
- Dam safety specialists
- Air and water quality operators
- Fire specialists
- Specialized vehicles and equipment
- Emergency response and IMT teams

| **Department of Transportation** | Response Agency functions as found in ESFs 1, 2, 3, 5, 7, 9, 10, 11, 12, 13, 14, and 15. Specifically:  
  - Provide evacuation routes and control points in addition to re-routing traffic as the incident progresses.  
  - Perform damage assessment of highways and bridges.  
  - Assist in debris removal from main roadways for the critical movement of response personnel.  |
| **Resources**                 | Information and support to the SEOC from the Wisconsin Department of Transportation (WisDOT)/Traffic Management Center (TMC), staffed 24/7/365  
  - Freeway Service Teams (FST).  
  - Engineering services for highways, streets, bridges, and other components to assist in the movement of traffic  
  - Specialized equipment such as front-end loaders, backhoes, and traffic control devices  
  - Monitoring  
    - Closed-circuit television cameras (CCTV)  
    - Roadway detectors and congestion maps  
    - Road weather information systems  
  - Traffic flow management  
    - Ramp control, meters, and gates  
    - Traffic signal systems  
  - Traffic information systems/programs  
    - 511  
    - Twitter  
    - Traffic incident alerts (TIAs)  
    - Dynamic message signs (DMS)  
    - Portable changeable message signs (PCMS)  
    - Highway advisory radio (HAR)  |
| **Public Service Commission** | **Response** Agency functions as found in ESFs 3, 12, and 14. Specifically:  
  - Liaison with energy suppliers to assist in restoring services as soon as possible.  
  - Liaison with tele-communications providers to provide emergency communications and restore services.  
  - Liaison with water and sewer system utilities along with other state agencies in the restoration of these utilities.  
  - Assist utilities with:  
    - Determining the extent of the damages and outages  
    - Restoration of services  
  - Collect/report damage assessment as appropriate.  |
| **Resources**                 | Staff to assist in the liaison between the utility companies and the SEOC  
  - Staff with specialized knowledge in power or energy, or both, systems  |
### Wisconsin Emergency Response Plan

</table>
| **University of Wisconsin & System Police Departments** | **Response**  
Agency functions as found in ESF 13. Specifically:  
- Provides complete laboratory services for appropriate state agencies and local health departments in the areas of water quality, air quality, public health, and contagious disease  
- Performs laboratory tests and consultations with health officers and local agencies to prevent and control diseases and environmental hazards  
- Provide coordination with other state laboratories as appropriate.  
- Provide law enforcement support as needed.  
**Resources**  
- Wisconsin State Laboratory of Hygiene  
- University System certified police officers and security staff |

| **Department of Military Affairs: Wisconsin Emergency Management** | **Response**  
Agency functions as found in the WERP, ESFs, and related annexes. Specifically:  
- Coordinate and support the mission of prevention, protection, mitigation, response, and recovery in such an incident to local jurisdictions and tribal governments.  
- Operation of the SEOC.  
- Coordinate the response of state agencies, federal assistance, and Voluntary Organizations Active in Disaster (VOAD).  
- Coordinate the federal and state assistance to local governments. Provide crisis communications, damage assessment reporting, and emergency police services (EPS) (including the WEM mobile command post.)  
- Receive information regarding a potential or actual terrorist threat or incident, including those involving WMD, through the WEM duty officer (DO).  
- Advise the HSC, the governor, state legislature, state agencies, local, and tribal units of government, as may be appropriate, of the nature, magnitude, and impacts of the terrorism incident.  
- Provide or assist in obtaining needed products and services from state contracted vendors or other outside vendors for emergency equipment and supplies.  
- Request and administer federal assistance as appropriate.  
- Provide support for SNS activities.  
  - In coordination with WI DHS, assist the governor when requesting assets from the SNS.  
  - Through the EPS deputy director, provide the security function lead for SNS.  
  - Through the EPS, provide back-up security for RSS warehouse.  
  - Coordinate with the WING, WisDOT/Wisconsin State Patrol (WSP) and local law enforcement to plan for route selection, security, traffic control, and other pertinent issues. Explore alternate means of transportation (e.g. helicopters, trains) as resources allow.  
- Provide support to local law enforcement through EPS.  
- Ensure that prisons and jails are notified of the potential threat and determine whether proper safety and security procedures are being taken using EPS procedures.  
- Request activation of Search and Rescue (SAR) teams as needed.  
- Collect and evaluate disaster assessment information.  
- Provide assistance with business continuity. |

| - SEOC. The SEOC is the primary location for coordinating the state’s emergency response and recovery activities.  
- EPS coordinates the deployment of the mobile command center and hand-held radios that augment county, tribal, or municipal communications capabilities in an emergency/disaster situation.  
- Wisconsin Hazardous Materials Response System  
- Inter-state mutual aid system  
  - The Emergency Management Assistance Compact (EMAC) is an interstate mutual aid agreement that allows states to assist one another in responding to all kinds of natural and man-made disasters.  
  - All states, the District of Columbia, and three territories participate in the EMAC System.  
- Secure Video Teleconference System (SVTS)  
- An Integrated System Digital Network (ISDN) phone line that uses signal encryption to provide a secure system for the delivery of sensitive information. |
| **Department of Military Affairs: Wisconsin National Guard** | **Response** |
| Agency functions as found in all 15 ESFs. Specifically:  
- Liaison with other military support units providing specialized services according to each unit’s capabilities.  
- As may be necessary and approved, provide support to local law enforcement as requested for:  
  - Crowd and traffic control  
  - Scene containment  
  - Quarantine reinforcement  
  - Crime scene integrity  
  - Security at incident command sites (e.g. EOC, command post, disaster site, jail)  
  - Security at public sites (e.g. shelters, hospitals, temporary morgue, joint information center)  
- Coordinate the request for a full time civil support team (CST) from a neighboring state through the EMAC system.  
- Provide support for SNS activities.  
  - Through the military support officer for the Wisconsin Department of Military Affairs (DMA), serve as the lead person for arranging use of WING assets in an incident involving SNS assets.  
  - Serve as the primary designee for airport and RSS warehouse security.  
  - Provide back-up vehicles (i.e. trucks) to transport SNS materials from the RSS warehouse to the distribution and dispensing site(s).  
  - Work with WEM EPS, WSP, and local law enforcement to plan for route selection, security, traffic control, and other pertinent issues. Explore alternate means of transportation (e.g. helicopters, trains), as resources allow.  
- Provide limited public information, transportation, and medical personnel.  
- Assist with the coordination and facilitation of state and federal military assets. |
### Wisconsin Emergency Response Plan

#### Terrorism Incident Annex

**Agency**

**Functions**

**Resources**
- The 115th Fighter Wing (115th FW), WING, maintains a military ordinance disposal team at its base in Madison. In the event of an incident involving military explosives, the 115th FW Explosive Operational Device (EOD) team may respond. Requests for the 115th FW EOD team are made through the WEM DO.
- Provides numerous support services referred to as specialized units and force packages as listed in the various ESFs and WING Domestic Operations and Civil Support resource guide.

**Department of Transportation:**

**Wisconsin State Patrol**

**Response**

Agency functions as found in ESFs 10, 12, and 13. Specifically:
- Provide staff for traffic control and law enforcement support activities.
- Coordinate traffic evacuation routes with WisDOT.
- Assist with SAR.
- Provide requested support to local law enforcement for:
  - Crowd and traffic control
  - Scene containment
  - Quarantine enforcement
  - Crime scene integrity
  - Security at incident command sites (e.g. EOC, command post, disaster site, jail)
  - Security at public sites (e.g. shelters, hospitals, temporary morgue, joint information center)
- Provide information, assistance, and notification support.
- Provide security for the transportation of cultures, laboratory specimens, or other materials that could support evidence of a terrorism incident.
- Provide escort to SNS trucks from the RSS to points of dispensing.
- Work with WEM EPS, WING, Federal Highway Administration, and local and tribal law enforcement to plan for route selection, security, traffic control, and other pertinent issues. Explore alternate means of transportation (e.g. helicopters, trains), as resources allow.
- Assist in dignitary protection.

**Resources**

- State troopers and truck inspectors
- Aerial support

---

**IV.D. Federal Role**

The National Response Framework (NRF), Terrorism Incident Law Enforcement and Investigation Annex outline the procedures to request federal assistance and details the responsibilities assigned to the federal agencies that could be involved in a terrorism incident. The activation and extent of involvement of these agencies is dependent upon the specific situation and various other factors including whether or not local and state resources have been exhausted, state emergency declaration(s), federal declaration(s), etc. Federal agencies will continue supporting local efforts as necessary during the recovery phase of the incident.
## Table 5: Federal Agencies Functions

| Federal Emergency Management Agency | **Response**  
US DHS coordinates the implementation of a comprehensive national strategy to secure the United States from terrorist threats or attacks as well as natural and man-made disasters. The HSC advisor (the Adjutant General) posts any threat or security level changes in coordination with WI DOJ. FEMA Consequence Management role in WMD response is to:  
- Coordinate federal consequence management efforts.  
- Coordinate federal offsite activities for functions other than radiological monitoring and assessment.  
- Promote the effective response by federal agencies at the national level and at the scene of the accident. Keep the president informed of all aspects of an emergency not covered by the lead federal agency reports.  
- Coordinate 28 urban search and rescue (USAR) task force teams.  
- Respond to natural, technological, and human-caused disasters to locate and rescue victims of structural collapse.  
- Provide mobile telecommunications, operational support and life support, and power generation assets for the on-site management of disaster and all-hazard activities.  
- **USAR teams**: Provide trained and equipped USAR teams and coordinate with FEMA for the utilization of civilian USAR teams. |
<p>| <strong>Resources</strong>                  | - Nuclear Emergency Search Team (NEST) provides specialized technical expertise to federal response agencies involved with radiological incidents.                                                                   |</p>
<table>
<thead>
<tr>
<th>Agency</th>
<th>Functions</th>

</thead>
</table>
| U.S. Department of Justice  | **Response: Federal Bureau of Investigation (FBI)**  
  - Briefs the U.S. attorney general, who notifies the president and the National Security Council groups that a federal crisis management response is required.  
  - Activates multi-agency crisis management structures at the FBI headquarters, the FBI field office, and the incident scene.  
  - The JOC will be composed of four main groups: Command, operations, consequence management, and support.  
    - The command group is comprised of senior officials from various levels of government who coordinate and decide on incident matters pertaining to the federal response and in support of state and local initiatives.  
    - The operations group consists of the following components:  
      - **Information intake (or control):** Central point for receiving information. Ensures that phone calls, emails, faxes, and other information are assessed for relevance to the threat, incident, or special event and relevant information is disseminated to the JOC.  
      - **Intelligence:** Collect, process, analyze, and disseminate current and valid intelligence data. Provide situation briefings to the individuals/groups designated by the command group.  
      - **Investigative:** Initiate and perpetuate the investigative activity. Document crisis response and develop, assign, and ensure completion of investigative leads.  
      - **Tactical:** Direct and coordinate all tactical personnel at the crisis site. Make recommendations and provide situational briefings to the command group.  
      - **Technical:** Direct and coordinate all technical personnel at the crisis site. Make recommendations and provide situational briefings to the command group.  
      - **Surveillance:** Direct and coordinate both ground and air surveillance units. Determine feasible options, make recommendations, and provide situational briefings to the command group.  
      - **Negotiations:** Direct and coordinate all negotiations personnel at the crisis site. Develop appropriate negotiation options and make recommendations to the command group.  
    - Consequence management group: Manage the additional assets that will respond to the incident.  
    - The support group supports the operations group as it pertains to logistical, legal, media, administrative, and liaison matters.  
    - Request that federal agencies deploy a representative to the FBI Headquarters Strategic Information and Operations Center (SIOC) and take other actions as necessary and appropriate to support crisis management. |
|                             | **Response: U.S. Marshals Service**  
  - Provide security to the federal judiciary and courts.  
  - Provide detection and confiscation of weapons. |
|                             | **Resources: FBI**  
  - Domestic Emergency Support Team (DEST): As the lead federal agency for crisis management, the FBI manages the crisis, bringing the necessary assets to respond and resolve the threat. These activities operate within a unified command structure.  
    - During an incident, the FBI Critical Incident Response Group will coordinate the composition of the DEST.  
    - The WMD Operations Unit will coordinate all incidents where WMD is used. |
**Agency** | **Functions**
--- | ---
**Department of Defense** | **Response**<br>Upon activation, provide resources for the incident to state and local units of government, as appropriate.<br><br>**Resources**<br>Regional WMD Civil Support Team (CST): Regional full-time, fully equipped teams are the 55th Civil Support Team located in St. Paul, MN and the 5th Civil Support Team in Bartonville, IL.<br>**Military Support to Civilian Agencies (MSCA):** Provide active duty military support to supplement the efforts of civilian agencies after the state, local, and private resources are exhausted or deemed totally inadequate for the situation.

**Department of Health & Human Services** | **Response**<br>Upon activation, provide resources for the incident to state and local governments, as appropriate.<br><br>**Response: Center for Disease Control and Prevention (CDC)**<br>Establish guidelines and procedures for safe response, evidentiary collection, exposure assessment, and laboratory involvement for sample analysis and the determination of threat validity.<br>Upon request from WI DHS, medically assess and evaluate people with potential exposure to determine if post-exposure treatment is warranted.<br><br>**Resources: CDC Public Health Surveillance Program**<br>Assist state and local planning and preparedness efforts to enhance outbreak detection and reporting and to improve laboratory and epidemiological capacity at the local, tribal, state, and CDC levels.<br><br>**Strategic National Stockpile (SNS) Program**<br>Provides pre-packaged response supplies and antibiotics that are flown into the site of an incident. The intent of SNS is to ensure the availability of life-saving pharmaceuticals, vaccines, antidotes and other medical supplies and equipment for prompt delivery to the site of a biological or chemical incident anywhere in the United States.<br><br>**Resources: Assistant Secretary for Preparedness and Response**<br>National Medical Response Teams (NDMS) is the first component of the NDMS medical response. This includes personnel, teams and individuals, supplies, and equipment. The NDMS Response Teams can include:<br>- Disaster Medical Assistance Teams (DMATs). These teams can be deployed in 12 hours or less and are self-sufficient for at least 72 hours.<br>- Disaster Mortuary Teams (DMORTs). DMORTs assist with the identification of bodies and all other aspects of mortuary services.<br>- Veterinary Medical Assistance Teams (VMAT)<br>- Metro Medical Response Systems (MMRS) - Milwaukee area<br>Local health and medical first response teams are designed to integrate existing assets into a coordinated response to the health and medical aspects of a WMD incident.<br>The MMRS teams can detect and identify NBC agents, triage, extract, treat and decontaminate patients, and forward patients to definitive care facilities.<br><br**Department of Energy** | **Response**<br>Upon activation, provide resources as appropriate for the incident to state, tribal, and local governments.
Agency | Functions
--- | ---
Radiological Assistance Program (RAP) | Resources
- Provides resources and expertise to agencies that respond to incidents involving radioactive materials. There are eight RAP regions and each region has one or more response teams. If the incident involves DOE-owned material, the RAP team will automatically respond or can be requested for general assistance for non-DOE owned materials.

Environmental Protection Agency | Response
- Coordinate all federal containment, removal and disposal efforts and resources during an incident using the National Oil and Hazardous Substances Pollution Contingency Plan (NCP).

Chemical Emergency Response Team | Resources
- Provides special decontamination equipment for chemical releases and advises the on-scene coordinator (OSC) in hazard evaluation, risk assessment, multimedia sampling and analysis, and on-site safety.

U.S. Postal Inspection Service | Response
- Investigate threats or acts of terrorism related to the use of the U.S. Postal Service, destruction of postal property, or threats or acts of violence against postal employees.

Postal investigators | Resources

General Services Administration: Federal Protective Services | Response
- Complete risk analysis and assess the security needs of federal buildings.

Officers for armed security protection | Resources

Other federal agencies – upon activation, provide resources as appropriate for the incident to state and local governments. See the National Response Framework for details.

IV.E. Non-Governmental Support Organizations

Table 6: Non-Governmental Support Organizations Functions

Agency | Functions
--- | ---
American Red Cross | Response
- Agency functions as found in ESFs 6, 7, 8, 11, and 14.
- The American Red Cross has developed a WMD/Terrorism (WMD/T) Annex that provides guidance for state and local chapters to respond to terrorism incidents. This annex details the American Red Cross response and recovery activities. Specifically:
  - Congregate care (e.g. temporary shelter, food, clothing, etc.)
  - Long-term support for first responders
  - Crisis counseling
  - Volunteer management
  - Service for access and functional needs populations (with the exception of access and functional needs sheltering)

Resources
- Support disaster relief operations by providing shelter, food, health and mental services, and emergency supplies to those affected.
## Functions

**Salvation Army**

**Response**

Agency functions as found in ESFs 6 and 14. Specifically:

- Assistance in providing necessities to survivors and relief workers.
- Provide distribution services or be a center for receiving and distributing donated items.
- Food
- Emotional and spiritual care

**Resources**

- Mobile feeding units
- Basic needs supplies for survivors

**Wisconsin Voluntary Organizations Active in Disaster**

**Response**

Agency functions as found in ESFs 6 and 14. Specifically:

- Coordination of disaster volunteer services.
- Assist in long-term recovery efforts, working in partnership with the American Red Cross and the Salvation Army.

**Resources**

See ESF 6, Attachment 3. Specifically:

- Debris removal, sheltering services, water/food, and basic needs

Depending upon the nature and scale of the incident, there may be the need for additional assistance and resources. Information on other supporting agencies along with their related response and resources can be found in the Catastrophic Incident Annex of the WERP.

I. Radiological Incident

I.A. Overview

A radiological incident, in the context of terrorism, can be described as the intentional release of radioactive material in sufficient quantity to constitute a threat to public health and safety. A radiological incident could involve airborne radioactive material or radioactive contamination of the environment, or both. The degree and area of a radiological incident could vary greatly depending on the type and amount of the release as well as current and future weather conditions. Response to a radiological incident requires specialized personnel who have been properly trained and equipped.

A radiological incident would likely result in massive social and economic disruptions in the affected areas. Access to and from an affected areas would need to be appropriately managed. Those individuals that received a high dose of radiation would require transportation, hospitalization, and lengthy supportive care. The number of fatalities would likely be low. However, special arrangements would be needed to handle and transport contaminated bodies. A decontamination of the affected area would be required. The cascading effects associated with a radiological release could cause major disruptions in transportation and other services nationwide.

Social and economic disruptions would be more widespread if a radiological incident was located in a densely populated area or if radioactive material is carried downwind or downstream, or both, to a densely populated area. A radiological incident affecting a densely populated area would quickly exceed local, state, and regional response capabilities. The rapid deployment of national assets such as Hazardous Material Teams, Emergency Medical Teams, and National Guard Weapons of Mass Destruction (WMD) Civil Support Team (CST) would be critical to response.

I.B. General Indicators

Radiation cannot be detected by the human senses, only by radiation detection instruments. However, radiological exposure can result in observable effects such as radiation sickness or death. The severity of the exposure effects depend on the amount of radiation dose. Acute radiation sickness occurs when an individual is exposed to a large amount of radiation within a short period.

I.B.1 Symptoms of acute radiation sickness include:
   a) Changes in blood cells and blood vessels
   b) Skin irritation (similar to sunburn but lasting three weeks)
   c) Gastrointestinal system effects
   d) Nausea and vomiting
   e) Diarrhea
   f) High fever
   g) Hair loss
   h) Dermal burns
   i) Severe injury to internal organs
j) Long-term physiological effects
Symptoms may appear shortly after exposure, then disappear for a few days, and reappear in a much more serious form in a week or so.

I.B.2 Later symptoms may include:
   a) Malaise, fatigue, and drowsiness
   b) Weight loss
   c) Fever
   d) Abdominal pain
   e) Insomnia and restlessness
   f) Blisters
   g) Large acute exposures can also cause long-term delayed effects such as cancer.

Chronic exposure is continuous or repetitive exposure, such as occurs from natural background radiation.

I.C. Types of Radiation

I.C.1 Alpha radiation
   a) Alpha particles are the heaviest and most highly-charged of the nuclear radiations.
   b) Alpha particles cannot travel more than a few inches in air and are completely stopped by an ordinary sheet of paper.
   c) Exposure to alpha radiation outside the body is not a serious hazard.
   d) If ingested through eating, drinking, or breathing contaminated materials, they can become an internal hazard, causing damage to internal organs.

I.C.2 Beta radiation
   a) Beta particles are smaller and travel much faster than alpha particles.
   b) Exposure to beta particles from outside the body is normally thought of as a slight hazard.
   c) If the skin is exposed to large amounts of beta radiation for long periods, skin burns may result.
   d) If removed from the skin shortly after exposure, beta-emitting materials will not cause serious burns.
   e) Like alpha particles, beta particles may damage internal organs if ingested.
   f) Beta-emitting contamination also can enter the body through unprotected open wounds or the lens of the eye.

I.C.3 Gamma radiation
   a) Gamma rays are a type of electromagnetic radiation transmitted through space in the form of waves that travel at the speed of light.
   b) Gamma rays are pure energy and therefore are the most penetrating type of radiation.
c) They can travel great distances and can penetrate most materials.

d) This creates a problem for humans, because gamma rays can attack all tissues and organs.

e) Large acute exposures to gamma radiation (approximately 100 rem) cause very distinctive, short-term symptoms.

I.D. Methods of Delivery

I.D.1 Improvised Nuclear Device (IND)

An IND is a crude, yield-producing nuclear weapon fabricated from diverted fissile material\(^1\). Another definition is an illicit nuclear weapon bought, stolen, or otherwise originating from a nuclear State, or a weapon fabricated by a terrorist group from illegally obtained fissile nuclear weapons material that produces a nuclear explosion\(^2\).

a) Suitcase bomb

It is possible to create a nuclear bomb small enough to be transported by one person using small amounts of nuclear material such as enriched uranium. Russia allegedly has an arsenal of suitcase-size nuclear bombs that could deliver a one-kiloton explosion capable of killing 100,000 people. As many as 84 such bombs were reported missing from Russia's arsenal in 1997. It is conceivable that a suitcase-size bomb could be brought into the U.S. hidden inside containerized imported cargo.

b) Attaché case bomb

Even smaller and lighter weight, atomic bombs the size of an attaché case were built by the United States in the 1970s and it is possible that they have also been produced in other countries. Bombs of this size would be easier to smuggle into the country.

I.D.2 Radiological Dispersal Device (RDD)

A RDD is a device or mechanism that is intended to spread radioactive material from the detonation of conventional explosives or other means\(^3\). Another definition is a device that poses a threat to public health and safety through the malicious spread of radioactive material by some means of dispersion. The mode of dispersion typically conceived as an RDD is an explosive device coupled with radioactive material\(^4\).

\(^4\) Planning Guidance for Protection and Recovery Following Radiological Dispersal Device (RDD) and Improvised Nuclear Device (IND) Incidents, FEMA, Federal Register 73, no. 149 (August 1, 2008).
II. Biological Incident

II.A. Overview

A biological incident, in the context of terrorism, can be described as the use of a biological toxin or infectious agent (e.g., bacteria, viruses, fungi) with the intention to threaten public health and safety. Incidents that focus on animal, plant, or food health and safety are specifically addressed in Section 7 Agroterrorism. The nature of a biological incident will vary based on the toxin or agent that is used, the method of delivery, and the manner of exposure.

A biological incident has the potential to expand beyond the initial point of attack through contagion or movement of the toxin or agent. A biological incident spread through contagion may be indistinguishable from a naturally occurring outbreak (e.g., seasonal influenza). It is possible that several days could pass before public health and medical authorities suspect that a biological incident may be the cause.

The time it takes for symptoms to appear after exposure can vary from almost immediate to days or weeks. The effects of exposure to a biological incident can range from somewhat debilitating to lethal. These differences have important implications that affect response planning including: treatment of mass casualties, appropriate treatment measures, measures to control the spread of disease, worker protections, decontamination measures, and handling of mass fatalities.

II.B. General Indicators

The initial indication of a biological incident may be the recognition by public health and medical authorities that a significantly increased number of people are becoming ill and presenting to local healthcare providers. General indicators may include:

II.B.1 Large epidemic, with an unusual number of ill or dying
II.B.2 Particularly high volumes of victims complaining primarily of respiratory symptoms which are severe, and are associated with an unprecedented mortality rate
II.B.3 The cause of the infection is unusual for the region
II.B.4 Multiple and simultaneous epidemics of animals and humans with the same illness
II.B.5 The epidemic is caused by a multi-resistant pathogen that has never been discovered
II.B.6 Dead animals of multiple types are encountered
II.B.7 The delivery vehicle for the agent is identified
II.B.8 Prior intelligence reports or claims by terrorists of an attack
II.B.9 Symptoms vary with the type of biological agent, including:
   a) Febrile symptoms (e.g., fever, headache, confusion, blurred vision, brain swelling)
   b) Respiratory symptoms (e.g., coughing, flu-like symptoms, shortness of breath)
   c) Digestive and intestinal symptoms (e.g., vomiting, nausea, diarrhea)
   d) Skin symptoms (e.g., rash, sores, pain, itching, discoloration, painful skin lesions)
   e) Generalized symptoms (e.g., general malaise, muscular weakness, fatigue, numbness, paralysis, chills, shock)
II.C. Types of Biological Toxins or Infectious Agents

II.C.1 Biological Toxins

Biological toxins refer to poisons derived from plants, animals, or microorganisms (e.g., plants, shellfish, sponges, corals).

a) Biological toxins do not grow, reproduce, or die after they have been dispersed.

b) Relatively few are suitable for use as weapons. Examples include botulism, ricin, Staphylococcus enterotoxin B (SEB), and saxitoxin.

c) In most cases, biological toxins are difficult to synthesize in the laboratory and are obtained from the organisms that create them usually in very small quantities. An exception is ricin, which comes from the castor bean and is easy to prepare in large quantities.

II.C.2 Infectious Agents

Infectious agents refer to disease-causing living organisms also referred to as pathogens.

a) Pathogens have life cycles in which they grow, reproduce, age, and die.

b) Pathogens usually depend on another living organism, known as a host, to survive and grow.

c) Pathogens fall into several major groups, which differ in how they grow and spread:

1. Bacteria (including mycoplasma and rickettsia)
2. Viruses
3. Protozoa
4. Fungi (including yeasts and molds)

II.D. Methods of Delivery

A biological incident may be disseminated through air, water, or food. Once released, the biological toxins or infectious agents may be spread by vectors (i.e., infected animals or insects that serve as hosts to the organism), vehicles (i.e., inanimate carriers such as food and water), and carriers (i.e., infected humans can transmit to other humans).

Common mediums and methods of delivery include:

II.D.1 Air

The toxin or agent is suspended in a liquid droplet or dry particles released into the air. An aerosol of liquid droplets or dry particles is more likely to be inhaled. A spray of liquid droplets or dry particles is more likely to contaminate surfaces. Potential delivery devices include:

a) Spray cans
b) Commercial sprayers
c) Aerosol generators
d) Systems designed to distribute pesticides from air or ground (e.g., crop duster airplanes, truck sprayers)

e) Heating/ventilating/air conditioning (HVAC) systems

f) Fans

II.D.2 Water

The toxin or agent is used to contaminate a potable water supply. Examples include contamination of a municipal water supply system or bottled water-processing plants.

II.D.3 Food supply

See Agroterrorism.

III. Chemical Incident

III.A. Overview

A chemical incident, in the context of terrorism, can be described as the use of a toxic chemical agent with the intention to threaten public health and safety. Incidents that focus on animal, plant, or food health and safety are specifically addressed in Section 7 Agroterrorism. The nature of a chemical incident will vary based on the chemical agent that is used, the method of delivery, and the concentration of exposure.

A chemical incident may involve the use of any toxic chemical agent. This includes those chemical agents developed or produced for commercial, industrial, and military uses. The concentration of a chemical agent can be affected by a number of variables including the volatility of chemical and wind speed. A release in a closed space (e.g., subway station, airport terminal, theater) could result in concentrations high enough to injure or kill a large number of people. The release of a toxic chemical agent in an open area would likely result in lower concentrations with fewer injuries or fatalities. In general, a chemical agent in liquid or vapor form results in greater exposure than a chemical agent in solid form.

A chemical incident is likely to be identified from the overt terrorist act or the diagnosis of the resultant casualties. However, some chemical agents have an immediate effect (i.e. symptoms in a few seconds to a few minutes) and some have a delayed effect (i.e. 2 to 48 hours). It is possible that considerable damage may occur by the time the incident is detected and the cause identified.

III.B. General Indicators

A chemical incident could occur without warning. Some chemical agents may be odorless and tasteless. However, many chemicals at high concentrations can be detected by properly equipped and trained emergency responders. Some general indicators of a chemical incident include:

III.B.1 Explosion

III.B.2 Unexplained bomb or munitions-like material, especially if it contains a liquid

III.B.3 Abandoned spraying devices

III.B.4 Unusual number of sick or dying people with symptoms such as:

a) Nausea
b) Disorientation
   c) Difficulty breathing
   d) Convulsions
   e) Localized sweating
   f) Red eyes
   g) Red or blistered skin

III.B.5 Pattern of casualties such as;
   a) Outdoors, distributed downwind
   b) Indoors, grouped within a confined area (e.g., shared HVAC system).

III.B.6 Unexplained odors or unusual smells that are out of character with the surroundings such as:
   a) Fruity
   b) Flowery
   c) Sharp or pungent
   d) Garlic or horseradish-like
   e) Bitter almonds or peach kernels
   f) New mown hay

III.B.7 Unusual fogs, clouds, mists, and liquids or surfaces with oily droplets or film, when there has been no recent rain. Low-lying cloud or fog-like condition inconsistent with surroundings.

III.B.8 Unexplained number of dead animals in the same area (including wild, domestic, small, large, birds, and fish)

III.B.9 Unexplained absence of normal insect activity (including ground, air, or water)

III.B.10 Trees, shrubs, bushes, food crops, or lawns that are dead, discolored, or withered, in the absence of drought conditions.

III.C. Chemical Agents

III.C.1 Categories
Chemical agents can be broadly grouped into three categories:
   a) Harassing agents
      Include substances that are sensory irritants and are not intended to kill or injure. In general, harassing agents have fleeting concentration dependent effects that resolve within minutes after removal. The casualty effects are not anticipated to exceed 24-hours nor require medical attention. Harassing agents are often referred to as Riot Control Agents (RCAs). They include:
      (1) Tear agents
      (2) Vomiting agents
      (3) Malodorants
b) Incapacitating agents

Include substances that produce debilitating effects with limited probability of permanent injury or loss of life. The casualty effects typically last over 24 hours and medical attention is recommended. They include:

(1) Psychological agents
(2) Other incapacitating agents

c) Lethal agents

Include substances intended to produce chemical casualties without regard to long-term consequences or loss of life. The casualty effects require medical treatment. They include:

(1) Blister agents
(2) Blood agents
(3) Choking agents
(4) Nerve agents

III.C.2 Physical Forms

a) Vapor or gas

(1) An agent in the gaseous state at normal temperatures and pressures.

(2) An agent in the gaseous state at a temperature where the same substance can exist in the liquid or solid state. For example, evaporating liquids or sublimating solids produce vapors. The agent would resume their liquid or solid state under pressure at ordinary temperatures.

b) Aerosols and sprays

Aerosols and sprays refer to liquid droplets or dry particles suspended in air that are released into the air. The difference is in the size of the droplets or particles released by the device nozzle.

(1) Aerosols have droplets or particles small enough to remain suspended and be inhaled.

(2) Sprays have bigger droplets or particles, which fall to the ground more quickly and are more likely to contaminate surfaces and be absorbed through the skin or ingested.

c) Liquid

(1) An agent in the liquid state at normal temperatures and pressures.

(2) Solutions of solids or of viscous liquids. They are dissolved to improve flow characteristics and make them easier to disseminate.

d) Solid

(1) An agent in the solid state at normal temperatures and pressures.

(2) May take the form of particulates (i.e. powder), which can be inhaled or absorbed through mucous membranes, eyes, or sweat dampened skin. They can be dissolved to form liquid agents.
III.D. Methods of Delivery

Chemical agents can be difficult to deliver in lethal concentrations. Potential delivery methods of chemical agents include:

III.D.1 HVAC system of a building
III.D.2 Misting, aerosolizing device, or sprayer
III.D.3 Passive release (e.g., open container)
III.D.4 Bomb, mine, or other explosive device
  Used to disperse a chemical agent other than that used to create the explosion
III.D.5 Improvised chemical device
  Combination of commonly available chemicals to produce a dangerous chemical
III.D.6 Sabotage of the transportation or storage of chemical agents developed or produced for commercial, industrial, and military uses

IV. Improvised Explosive Device (IED) Incident

IV.A. Overview

An IED incident can be described as the use of a “homemade” bomb or destructive device to destroy, incapacitate, harass, or distract. The primary focus of this subsection is explosive-base IEDs. The use of an IED for the dispersal of radiological material (i.e., Radiological Dispersal Device) is addressed in Subsection 1; dispersal of biological material is addressed in Subsection 2; and, dispersal of chemical material is addressed in Subsection 3.

Due to their improvised nature an IED can take many forms. Examples range from a small pipe bomb to a sophisticated device capable of causing massive damage and loss of life. An IED consists of a variety of components that including initiator, switch, main charge, power source, and a container. An IED may be surrounded by or packed with additional materials such as nails, glass, or metal fragments designed to increase the amount of shrapnel propelled by the explosion. An IED can be initiated by a variety of methods depending on the intended target.

An IED is likely to be placed in a public place or high traffic area to maximize damage and casualties. Generally, explosions within confined buildings will have the greater number of casualties due to confinement of the blast wave and possible structural collapse. The primary injuries involved in bombings involve blunt trauma and multiple penetrating injuries.

The U.S. Department of Health & Human Services (HHS) defines four types of blast injuries:

IV.A.1 Primary
  Unique to High Explosive. Injuries result from the impact of the over-pressurization wave. Injuries include pulmonary damage, hollow viscus injury, and ruptured organs.

IV.A.2 Secondary
  Injuries result from flying debris and bomb fragments. Injuries include penetrating trauma, fragmentation injuries, and blunt trauma.

IV.A.3 Tertiary
Injuries result from individuals being thrown by the blast wind. Injuries include fractures, amputations, and blunt or penetrating trauma.

IV.A.4 Quaternary

All explosion-related injuries, illnesses, or diseases not due to primary, secondary, or tertiary types of injuries. Injuries include burns, asphyxia, toxic exposures, or crushing injuries.

IV.B. Explosive Materials

Many commonly available materials such as fertilizer, gunpowder, and hydrogen peroxide can be used as the explosive materials in IEDs.

Source: Fact Sheet "IED Attack", prepared by the National Academy of Engineering and the National Research Council of the National Academies in cooperation with the U.S. Department of Homeland Security.

IV.C. General Indicators

IV.C.1 IEDs have five basic components.

a) Initiator
b) Switch

The use of cell phones is expanding as a switch or sensor to detonate IEDs.

c) Main charge
d) Power source
e) Container

These components may be very crude or sophisticated depending upon the knowledge and the ability of the bomb maker.

\(^5\) Ammonium nitrate (without fuel oil) is used as fertilizer.
IV.C.2 Protruding wires or fuses
IV.C.3 Containers left in high traffic or specific CIKR locations
IV.C.4 Unusual chemical odors or stains on a container
IV.C.5 Signs of a previous explosion as some bomb makers may test their bomb design prior to the actual attack

**IV.D. Method of Delivery**

An IED can be delivered in a variety of methods including:

IV.D.1 Vehicle

Vehicle-borne improvised explosive device (VBIED), either stationary or moving

IV.D.2 Suicide bomber

Either male or female; may have a partner suicide bomber for a secondary targets such as first responders.

IV.D.3 Concealment options for smaller explosives:

a) Backpacks, suitcases, briefcases, satchels, of various types and sizes looking like everyday items

b) Jars, bottles, and can containers some resembling sports drinks of various sizes

c) Shoes and clothing

IV.D.4 Fragmentation of IEDs has been used to increase the distance bomb fragments travel by including materials such as nails, steel balls, etc. either placed inside the container or wrapping them on the outside of the bomb.

IV.D.5 Diversionary tactics have been used by terrorists to draw first responders away from the primary target. Some indicators of diversionary tactics are:

a) Reports of suspicious activities or bomb threats in multiple locations throughout the jurisdiction

b) Reported multiple incidents that require the response of specialized units

c) Significant increase in minor incidents requiring the response by first responders to investigate

d) Activity increases inconsistent with normal call patterns

**IV.E. Stand-off Distances**

A “stand-off distance” is the distance between the device and those being protected and to safeguard life. There needs to be a stand-off distance for an explosive device or bomb threat with a found unknown object. The following chart is only a general “rule of thumb” for stand-off/evacuation distances.
V. Improvised Incendiary Device (IID) Incident

V.A. Overview
An IID incident can be described as the use of an improvised incendiary device or “firebomb” to destroy, incapacitate, harass, or distract. An IID can be made from everyday items that are purchased from various stores with little or no detection. They can be used against various targets with little detection. They require little or no training to construct or use. They have been used against government facilities, commercial buildings, vehicles, and railroad lines. They may be used in crowded areas with limited evacuation points to cause panic. They are capable of causing mass casualties, fear, and panic.

V.B. General Indicators

V.B.1 Suspicious Fire(s)
Fire(s) that are suspicious in nature with broken glass or melted plastic close to the origin of the fire.

V.B.2 Container(s) of Unknown Liquid
Found container(s) of unknown liquid that appear to have burn residue by the opening, which are found in public places.

V.B.3 Container(s) of Highly Flammable Liquids
Containers with highly flammable liquids, acids, or other unusual chemicals, which normally are not marked.

V.B.4 Fuel Odor
Smell of gasoline or fuels

V.B.5 Tubing, glass jars, bottles, or large number of matches

V.C. Types

V.C.1 Molotov cocktail
Small glass container with gasoline and a cloth that is lit and thrown.

V.C.2 Suitcase

Suitcase with flammable liquids inside with a delayed ignition device.

**V.D. Method of Delivery**

V.D.1 Triggering methods

a) Chemical reactions (e.g. burning fuses)
b) Electronic ignition (e.g. relays, switches, timing device)
c) Mechanical ignition (e.g. wires, pins, pressure plates)

V.D.2 Dissemination systems and devices

a) Thrown by hand
b) Placed in stationary manner
c) Self-propelled
d) Placed in a vehicle driven into a building or crowd

**VI. Cyber Incident**

**VI.A. Overview**

A cyber incident can be described as the hostile use of information technology by individuals or groups for the purpose of financial gain or as an action to further a social or political agenda. This includes the use of information technology to threaten, exchange information, or organize and execute attacks against networks, computer systems, and infrastructure. Familiar cyber incidents include, but are not limited to, unauthorized access to networks, infection of vulnerable systems by computer virus, web site defacing, and denial-of-service attacks.

**VI.B. Types of Cyber Incidents**

In most cases a cyber incident can be characterized as either being carried out for financial gain, directly or as a hired actor, or to further a social or political agenda. Types of cyber incidents include:

VI.B.1 Penetration of a system to modify its output

Embedding code (e.g. Trojan horses or “logic bombs”) to perform unauthorized functions later.

VI.B.2 Theft

System penetration with the goal of stealing information or sensitive data (e.g. password cracking and theft, “packet sniffing”).

VI.B.3 Disabling a system

Disruption of information structures (e.g., using e-mail bombings, spamming, denial-of-service attacks, or viruses) to crash or disable a system.

VI.B.4 Taking control of a system
Taking over a system (e.g. an air traffic system, a manufacturing process control system, a subway or train system, a 911 communications system) to use it as a weapon.

VI.B.5 Website defacement

Hacking into a website and changing its contents to spread misinformation, incite to violence, generate fear, or create chaos.

VI.C. Techniques

The cyber incident hazard is rapidly evolving. The following describes a variety of techniques that have been used:

VI.C.1 Phishing

A malicious attempt to obtain sensitive information by disguising as a trustworthy entity in an electronic communication.

VI.C.2 Spear-phishing

A phishing attempt directed at specific individuals or companies. Attacks may gather personal information about their target to increase their probability of success.

VI.C.3 Social engineering

A psychological manipulation of people into performing actions or divulging confidential information.

VI.C.4 Malware

Any software used to disrupt computer or mobile operations, gather sensitive information, gain access to private computer systems, or display unwanted advertising. Malware is a general term used to refer to a variety of forms of hostile or intrusive software including:

a) Virus

A computer virus is a type of malicious software program that, when executed, replicates by reproducing itself or infecting other computer programs by modifying them. Viruses often perform some type of harmful activity on infected host computers.

b) Worms

A computer worm is a standalone malware computer program that replicates itself in order to spread to other computers. Probably the most common code spread by worms is to install a backdoor allowing the computer to be remotely controlled as a “zombie”. Networks of such machines are often referred to as botnet and are very commonly used for a range of malicious purposes, including sending spam or performing Denial of Service attacks. Other code spread by worms might delete files on a host system, encrypt files in a ransomware attack, or steal confidential data.

c) Trojan

Any malicious computer program used to hack into a computer by misleading users of its true intent. Trojans are generally spread by some form of social engineering. A Trojan allows an attacker to access personal information.

VI.C.5 Botnet
A number of internet-connected devices used by a botnet owner to perform various tasks. Botnets can be used to perform Distributed Denial of Service Attack, steal data, send spam, allow the attacker access to the device and its connection.

VI.C.6 Web Application Security

Websites are often attacked directly. Hackers either seek to compromise the corporate network or the end-users accessing the website. The majority of web application attacks occur through cross-site scripting (XSS) and SQL injection attacks which typically result from flawed coding, and failure to sanitize input to and output from the web application.

VI.C.7 Web Stolen devices

Stolen or lost smartphones, notebook computers, and tablets endanger private and corporate information.

VI.C.8 Malicious insiders

An insider is anyone who has approved access, privilege, or knowledge of information systems, information services and missions. A malicious insider is one motivated to adversely affect an organization’s mission by taking action that compromises information confidentiality, integrity, or availability.  

VI.C.9 Denial of service

Denial-of-service attack (DoS attack) or distributed denial-of-service attack (DDoS attack) is an attempt to make a machine or network resource unavailable to its intended users. Although the means to carry out, motives for, and targets of a DoS attack may vary, it generally consists of the efforts of one or more people to temporarily or indefinitely interrupt or suspend services of a host connected to the Internet.

VI.C.10 High Energy Radio Frequency Weapon (HERF)

A directed-energy weapon used to disrupt digital equipment, such as computers. HERF works by blasting high-intensity radio waves at electronics, disrupting their operation.

VI.C.11 Electromagnetic Pulse (EMP) Weapon

Minor EMP event can cause low levels of electrical noise or interference which can affect the operation of susceptible devices. A large and energetic EMP event can induce high currents and voltages which can temporarily disrupt or permanently damage susceptible devices.

VI.C.12 System intrusion

Unauthorized entry into a computer system or network (hacking).

VI.C.13 Logic bomb

A piece of code intentionally inserted into a software system that will set off a malicious function when specified conditions are met.

---

VI.C.14 Packet sniffing
   A computer program or piece of computer hardware that can intercept and log traffic that passes over a digital network or part of a network

VI.C.15 Spamming
   The use of electronic messaging systems to send an unsolicited message, especially advertising, as well as sending messages repeatedly on the same site.

VI.C.16 Virtual sit-in
   A form of electronic civil disobedience using a distributed denial-of-service attack (DDOS).

VII. Food and Agricultural Incident

VII.A. Overview
   A food and agricultural incident, in the context of terrorism, can be described as any intentional actions that threaten or disrupt the means of production or the quantity, quality, or safety of the state’s food and agricultural products. This includes the introduction and spread of plant and animal pests and diseases. Specifically, diseases that have the potential to spread to humans (zoonotic diseases) such as brucellosis and rabies; that may spread from farm to farm such as foot-and-mouth disease (FMD) or pseudorabies; and diseases that cause other states and nations to close trade doors to our livestock and agricultural products such as avian influenza or tuberculosis.

Agroterrorism has been defined by FBI as; “the deliberate introduction of an animal or plant disease for the purpose of generating fear, causing economic losses, or undermining social stability.”

VII.B. General indicators
   VII.B.1 Thefts or missing anhydrous ammonia or other fertilizer products
   VII.B.2 Thefts or missing livestock
   VII.B.3 Diseased animals in a previously healthy population
   VII.B.4 Suspicious individuals taking photos or asking questions around food processing facilities or farms
   VII.B.5 Individuals renting agriculture-related equipment with no logical reason or purpose
   VII.B.6 Individuals or vehicles that are found to have manuals, biological or chemical agents, or vaccines for no related agricultural or livestock purpose
   VII.B.7 Attempted or break-ins at livestock facilities
   VII.B.8 Altered documents for animals being transported

VII.C. Types
   VII.C.1 Foot and Mouth Disease (FMD) as a Primary Threat
      a) Highly contagious virus in mainly hoofed animals
b) Airborne transmission with a range of 50 miles

c) FMD virus can survive in straw and clothing for a month

d) Generally, people cannot contract the disease but can carry the virus in their lungs and transmit it to animals for up to 48 hours

e) To limit the spread, requires the immediate limitations on the movement of animals

VII.C.2 Food production and distribution contamination

a) Involves the dissemination of such bacteria and toxins as botulism, E. coli, and salmonella

b) Fruit and vegetable packing plants are amount the most vulnerable for attacks

c) Processed foods move within hours to distribution centers which could be before the detection of any contamination

VII.D. Method of Delivery

VII.D.1 There are four categories of agroterrorists involved in various delivery methods:

a) Transnational groups emanating from outside of the United States

b) Economic opportunists that attempt to manipulate the financial markets

c) Domestic terrorists such as a disgruntled employee or an individual with a grudge against the government

d) Militant animal rights or environmental activists against the use of animals for food

VII.D.2 During transportation around truck stops, rest areas, etc.

VII.D.3 Aerial application of chemical agents by rented aircraft

VII.D.4 Direct contamination at processing plants prior to shipment

VII.D.5 Direct contamination at final food distribution sites such as grocery stores and restaurants prior to purchase.

VII.E. Vulnerabilities in Agricultural Areas

VII.E.1 Insufficient security and surveillance at various sites and facilities

VII.E.2 New and larger concentration of livestock limiting attending to animals individually

VII.E.3 Livestock becoming more susceptible to disease

VII.E.4 Lack of effective disease reporting systems as producers lack incentives and fear monetary losses

VII.E.5 Lack of training of veterinarians and others in recognizing foreign livestock diseases

I. Procedure for Unknown Substance

I.A. Package or Letter

Figure 1: Procedure for Unknown Substance

UNKnown SUBSTANCE/PACKAGE/LETTER
DO NOT sniff, touch, or move package/letter. DO NOT change environment, including lights.

Law enforcement will perform a threat/risk assessment
(See reverse for assessment guidelines).

Is there an explicit threat, implicit threat, or risk to persons or the environment?

No

- Advise the persons reporting the incident to wash their hands.
- Item in question can be double-bagged (to avoid additional incidents) and then thrown in trash.
- No laboratory testing is necessary.
- Public health does not need to be notified.

Yes

Law enforcement will secure area and call local public health.

Did it arrive in the US Mail?

No

Local LE calls the FBI
414-276-4684

- Notify Hazmat and/or CST
- Notify medical care if needed

Yes

Local LE calls the USPIS
877-876-2455

- Advise any persons who handled the material to wash their hands and remain at the scene in a separate room.
- Do NOT touch or disturb the item in question until a public health and safety risk assessment is done.
- When there is a risk to the public’s health or safety, the following steps will be taken in this order:

1. Law enforcement will assess if there is a possibility that the item is an explosive device.
2. Hazmat/CST will assess the item for radiologic, chemical, and explosive hazard.
3. NO biologic field testing will be done UNLESS performed by the USPIS inspector, CST, or with an FBI agent present.
4. Digital photographs will be taken of the item and provided to public health, the lab, and law enforcement.
5. Hazmat/CST/USPIS will triple-bag the item in the smallest clear bag possible.
6. Public Health MUST be contacted to arrange for the item to be analyzed at either the WSLH (biological and/or chemical agent testing) or the City of Milwaukee Labs (biological agent testing only).

Department of Health Services Threat Liaison Officer (608) 267-9010 after hours call (608) 258-0099

Wisconsin Procedure for Unknown Substance/Package/Letter
A joint protocol produced by WI Division of Public Health, WI State Laboratory of Hygiene, FBI, US Postal Inspection Service, Capitol Police, WI Emergency Management, and the 54th Civil Support Team WING
I.B. Law Enforcement Threat Assessment

Figure 2: Law Enforcement Threat Assessment

LAW ENFORCEMENT THREAT ASSESSMENT

DO NOT sniff, touch, or move package/letter. DO NOT change environment, including lights.

Is there threatening communication in or on the package?

Yes

No

• An explicit threat has been made.
• An articulated threat is a federal crime, whether or not a suspicious substance is present.
• Law enforcement should secure the area, call the FBI, HazMat and/or CST, and call local public health department.
• Remove those exposed or at risk from the immediate area.
• Notify medical care if needed.

Does the letter/package include any of the following?

- Oily stains, discolorations or odor
- Powder seen on letter/package or felt through wrapping
- Protruding wires or aluminum foil
- Excessive weight
- Taped or uneven envelope
- Unusual sound
- Inappropriate or unusual labeling
- Excess postage
- Marked “Personal,” “Confidential,” “Do not X-Ray,” etc.
- Intended recipient is a judge, government official, political activist, ethnic/religious group leader, abortionist, animal researcher, etc.
- Strange return address or no return address
- Postmarked from city or state not matching return address
- Incorrect titles or title without a name
- Not addressed to a specific person
- Misspellings of names or common words
- Excess packaging material such as masking tape, string
- If addressed to a specific person confirm no volatile business or domestic dispute issues are associated with the intended recipient
• Other suspicious signs

Yes

No

One or more possible threat indicators are present.

Is there a reasonable and defendable explanation for the source/cause of the substance or other abnormality?

- For example, cornstarch and talcum powder are often used in mailers to keep pages from sticking; vitamins may release powders if crushed during mailing.

Yes

No or Unsure

In the absence of an explicit threat or possible threat indicators, the index of suspicion for a threat is decreased. However, law enforcement should make an assessment based on the totality of circumstances.

Yes

No

If there is a reasonable explanation for source/cause, there is a decreased index of suspicion of a threat. However, law enforcement should make an assessment based on the totality of circumstances.

With no reasonable explanation for source/cause, there is an increased index of suspicion of a threat. However, law enforcement should make an assessment based on the totality of circumstances.

If a threat is suspected, secure the area and call local public health department.

Department of Health Services Threat Liaison Officer (608) 267-9010 after hours call (608) 258-0099

Wisconsin Procedure for Unknown Substance/Package/Letter
A joint protocol produced by WI Division of Public Health, WI State Laboratory of Hygiene, FBI, US Postal Inspection Service, Capitol Police, WI Emergency Management, and the 54th Civil Support Team WING

May 7, 2013
I.C. Public Health Exposure Assessment

Figure 3: Public Health Exposure Assessment

PUBLIC HEALTH EXPOSURE ASSESSMENT

Local health department staff will contact the State health department Threat Liaison Officer at (608) 267-5010 after hours call (608) 258-0099. Shut down building’s HVAC system if threatening substance is found indoors.

Has a suspected ingestion, inhalation, or dermal exposure occurred?

No

- Advise the persons reporting to wash their hands.
- No clinical testing or medical evaluation is necessary.
- If law enforcement deems there is a threat arrange for laboratory analysis of substance(s) at either the WSLH (biological and/or chemical agent testing) or the City of Milwaukee Labs (biological agent testing only) in collaboration with law enforcement. Follow appropriate packaging and chain of custody protocols.
- If law enforcement deems there is not a threat and does not need the item as evidence double-bag (to avoid additional incidents or concerns) and dispose of the material.

Yes

- Wash affected areas and remove/bag contaminated clothing as necessary.
- Transport all those suspected to have been exposed to the nearest emergency room for appropriate medical evaluation based on the type of agent and exposure, if known.
- Keep a log of affected/treated individuals.
- In the absence of symptoms, advise potentially exposed individuals to be alert for possible delayed reactions up to 72 hours after the suspected exposure, and to return to an emergency room or their medical provider if symptoms occur.
- Check back 72 - 96 hours post-exposure for further medical evaluation. Document all details of the evaluation, and specify the date and time of onset for any new symptoms.
- Arrange for laboratory analysis of substance(s) at either the WSLH (biological and/or chemical agent testing) or the City of Milwaukee Labs (biological agent testing only) in collaboration with law enforcement. Follow appropriate packaging and chain of custody protocols.

II. Handling Powder-Contaminated Letters or Packages

Figure 4: Handling Powder-Contaminated Letters or Packages

Handling Powder-Contaminated Letters or Packages
Supplement Guidance for Mail Rooms to United States Postal Service Poster 84

Handling contaminated letters or packages can put anyone, including trained professionals, at risk. If you receive suspicious mail, call 911 immediately. For the safety of yourself and others, be sure to avoid:

- Shaking or emptying the contents of the item.
- Showing the item to others or moving it once it has been placed on the nearest stable surface.
- Sniffing, touching, tasting, or inspecting the item or any contents that may have spilled.

If you have opened an envelope or package and you suspect there is a hazardous powder present, call 911 and:

1. Place the envelope or package (item) on the nearest stable surface.
2. The person(s) who handled the item should remain in the room, move slowly away from the item, and then move as little as possible until they receive instructions from law enforcement officials, emergency responders, or public health authorities. This will greatly reduce the risk of exposure to others.
3. The person(s) who handled the item should alert other persons in the area. Person(s) that did not handle the item should leave the room. No objects (e.g., handbags, knapsacks, coats) should be removed from the room.
4. Notify a supervisor or a security officer, and contact your local law enforcement agencies. Only allow law enforcement or first responders to examine the item.
5. People departing should close any doors to prevent others from entering the area. If possible, turn off any fans in the room and close any open windows.
6. People departing should wash hands and other exposed skin with soap and water.
7. People departing should remain in the immediate area outside of the room/building and wait for law enforcement officials, emergency responders, or public health authorities to provide decontamination and further evacuation instructions.
8. The safety officer or supervisor should create a list of persons who were in the room or area when the item was recognized and a list of persons who may have handled the item. Give the list to the local law enforcement officials, emergency responders, or public health authorities responding to the event.

</tbody>
</table>
Agency Representative

A person assigned by a primary, assisting, or cooperating federal, state, local, or tribal government agency or private entity that has been delegated authority to make decisions affecting that agency’s or organization’s participation in incident management activities following appropriate consultation with the leadership of that agency.

Agency

A division of government with a specific function offering a particular kind of assistance. In ICS, agencies are defined either as jurisdictional (having statutory responsibility for incident management) or as assisting or cooperating (providing resources or other assistance).

Area Command (unified area command)

An organization established (1) to oversee the management of multiple incidents that are each being handled by an ICS organization or (2) to oversee the management of large or multiple incidents to which several incident management teams have been assigned. Area Command has the responsibility to set overall strategy and priorities, allocate critical resources according to priorities, ensure that incidents are properly managed, and ensure that objectives are met and strategies followed. Area Command becomes unified area command when incidents are multi-jurisdictional. Area Command may be established at an EOC facility or at some location other than an ICP.

Available Resources

Resources assigned to an incident, checked in, and available for use, normally located in a staging area.

Catastrophic Incident

Any natural or man-made incident, including terrorism that results in extraordinary levels of mass casualties, damage or disruption severely affecting the population, infrastructure, environment, economy, national morale and/or government functions. A catastrophic incident could result in sustained national impacts over a prolonged period of time; almost immediately exceeds resources normally available to state, local, tribal, and private-sector authorities in the impacted area; and significantly interrupts governmental operations and emergency services to such an extent that national security could be threatened.

Chain of Command

A series of command, control, executive, or management positions in hierarchical order of authority.

Command Staff

In an incident management organization, the command staff consists of the incident command and the special staff positions of public information officer, safety officer, liaison officer, and other positions as required, who report directly to the incident commander. They may have an assistant or assistants, as needed.
Community Recovery

In the context of the NRF and its annexes, the process of assessing the effects of presidentially-declared disaster, defining resources, and developing and implementing a course of action restore and revitalize the socioeconomic and physical structure of a community.

Consequence Management

Predominantly an emergency management function that includes measures to protect public health and safety, restore essential government services, and provide emergency relief to governments, businesses, and individuals affected by the consequences of terrorism. The requirements of consequence management and crisis management are combined in the NRF. See also crisis management.

Credible Threat

A potential terrorist threat that, based on a threat assessment, is credible and likely to involve WMD.

Crisis Counseling Grants

Funded by FEMA under the Stafford Act to address the counseling needs of a community following a presidentially-declared disaster in which individual assistance is authorized.

Crisis Management

Predominantly a law enforcement function that includes measures to identify, acquire, and plan the use of resources needed to anticipate, prevent, and/or resolve a threat or act of terrorism. The requirements of consequence management and crisis management are combined in the NRF. See also consequence management.

Critical Infrastructures

Systems and assets, whether physical or virtual, so vital to the United States that incapacity or destruction of such systems and assets would have a debilitating impact on security, nation economic security, national public health or safety, or any combination of those matters.

Cultural Resources

Cultural resources include historic and prehistoric structures, archeological sites, cultural, landscapes, and museum collections.

Cyber

Pertaining to computers and their support systems, such as servers, routers, and switches that support critical infrastructure.

Defense Support of Civil Authorities (DSCA)

Refers to DOD support, including federal military forces, DOD civilians and contractor personnel, and DOD agencies and components, for domestic emergencies and for designated law enforcement and other activities.

Deputy

A fully qualified individual who, in the absence of a superior, could be delegated the authority to manage a functional operation or perform a specific task. In some cases, a deputy could act as relief for a superior and therefore must be fully qualified in the
Deputies can be assigned to the incident commander, general staff, and branch directors.

**Disaster Recovery Center (DRC)**

A facility established in a centralized location within or near the disaster area at which disaster victims (individuals, families, or businesses) apply for disaster aid.

**Disaster**

See major disaster.

**Emergency Operations Center (EOC)**

The physical location at which the coordination of information and resources to support domestic incident management activities normally takes place. An EOC may be a temporary facility or may be located in a more central or permanently established facility, perhaps at a higher level of organization within a jurisdiction. EOCs may be organized by major functional disciplines (e.g., fire, law enforcement, and medical services), by jurisdiction (e.g., federal, state, regional, county, city, tribal), or by some combination thereof.

**Emergency Public Information**

Information that is disseminated primarily in anticipation of an emergency or during an emergency. In addition to providing situational information to the public, it also frequently provides directive actions required to be taken by the general public.

**Emergency Response Plan (ERP)**

The "steady-state" plan maintained by various jurisdictional levels for managing a wide variety of potential hazards.

**Emergency Response Provider**

Includes federal, state, local, and tribal emergency public safety, law enforcement, emergency response, emergency medical (including hospital emergency facilities), and related personnel, agencies, and authorities. (See section 2(6), Homeland Security Act of 2002, Public Law 107-296, 116 Stat. 2135 (2002).) Also known as "emergency responder."

**Emergency Support Function (ESF)**

A grouping of government and certain private-sector capabilities into an organizational structure to provide the support, resources, program implementation, and services that are most likely to be needed to save lives, protect property and the environment, restore essential services and critical infrastructure, and help survivors and communities return to normal, when feasible, following domestic incidents. The ESFs serve as the primary operational-level mechanism to provide assistance to state, local, and tribal governments or to federal departments and agencies conducting missions of primary federal responsibility.

**Emergency**

As defined by the Stafford Act, an emergency is "any occasion or instance for which, in the determination of the president, federal assistance is needed to supplement state and local efforts and capabilities to save lives and to protect property and public health and safety, or to lessen or avert the threat of a catastrophe in any part of the United States."
Emerging Infectious Diseases

New or recurring infectious diseases of people, domestic animals, and/or wildlife, including identification, etiology, pathogenesis, zoonotic potential, and ecological impact.

Environment

Natural and cultural resources and historic properties as those terms are defined in this glossary and in relevant laws.

Environmental Response Team

Established by EPA, the environmental response team includes expertise in biology, chemistry, hydrology, geology and engineering. The environmental response team provides technical advice and assistance to the OSC for both planning and response to discharges and release of oil and hazardous substances into the environment.

Evacuation

Organized, phased, and supervised withdrawal, dispersal, or removal of civilians from dangerous or potentially dangerous areas, and their reception and care in safe areas.

Facility Management

Facility selection and acquisition, building services, information systems, communications, safety and health, and physical security.

Federal Coordinating Officer (FCO)

The federal officer who is appointed to manage federal resource support activities related to Stafford Act disasters and emergencies. The FCO is responsible for coordinating the timely delivery of federal disaster assistance resources and programs to the affected state and local governments, individual victims and the private sector.

Federal On-scene Coordinator (FOSC or OSC)

The federal official pre-designated by the EPA or the USCG to coordinate responses under subpart D of the NCP, or the government official designated to coordinate and direct removal actions under subpart E of the NCP.

First Responder

Local and nongovernmental police, fire, and emergency personnel who in the early stages of an incident are responsible for the protection and preservation of life, property, evidence, and the environment, including emergency response providers as described in section 2 of the Homeland Security Act of 2002 (6 U.S.C. 101), as well as emergency management, public health, clinical care, public works, and other skilled support personnel (such as equipment operators) who provide immediate support services during prevention, response, and recovery operations. First responders may include personnel from federal, state, local, tribal, or nongovernmental organizations.

Access and Functional Needs Populations

People who may have challenges preparing for and responding to disasters can present with a wide variety of needs. Rather than labeling such individuals, Wisconsin’s practice conforms with the NIMS function-based categorization of access and functional needs:
Communication: individuals who have limitations that interfere with the receipt of and response to information, such as people with (1) limited hearing or vision, (2) limited speaking ability, (3) limited English proficiency, (4) cognitive disabilities, or (5) mental health issues.

Maintaining health: individuals who are not self-sufficient or require medical assistance or treatment, such as (1) special diets, (2) durable medical supplies and/or equipment, or (3) medications.

Independence: individuals requiring support to be independence in daily activities, including people who (1) need adaptive facilities, equipment, or supplies, or (2) normally use the services of a personal assistant.

Safety, self-determination, and supervision: individuals who require caregivers in order to adequately cope with unusual situations and are unable to identify themselves or lack cognitive ability to assess a situation and react appropriately.

Transportation: individuals who cannot drive or who do not have a vehicle and individuals who are not ambulatory.

**Functional Needs Support Services (FNSS)**

Services that enable individuals to maintain their independence in a general population shelter. FNSS includes

- reasonable modification to policies, practices, and procedures
- durable medical equipment (DME)
- consumable medical supplies (CMS)
- personal assistance services (PAS)
- other goods and services as needed

**Hazard Mitigation**

Any cost-effective measure which will reduce the potential for damage to a facility from disaster event.

**Hazard**

Something that is potentially dangerous or harmful, often the root cause of an unwanted outcome.

**Hazardous Material**

For the purposes of ESF 1, hazardous material is a substance or material, include a hazardous substance, that has been determined by secretary of the U.S. Department of Transportation to be capable of posing a unreasonable risk to health, safety, and property when transported in commerce, and which has been so designated (see 49 CFR 171.8). For the purposes of ESF 10 the term is intended to mean hazardous substances, pollutants, and contaminants as defined the NCP.

**Hazardous Substance**

As described by the NCP, any substance designated pursuant to section 311 (b)(2) (A) of the Clean Water Act; any element, compound, mixture, solution, or substance designated pursuant section 102 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA); any hazardous waste having the
characteristics identified under or listed pursuant to section 3001 the Solid Waste Disposal Act (but not including any waste the regulation of which under the Solid Waste Disposal Act (42 U.S.C. § 6901 et seq.) has been suspended by act of Congress); any toxic pollutant listed under section 307(a) of the Clean Water Act; hazardous air pollutant listed under section 112 of Clean Air Act (42 U.S.C. § 7521 et seq.); and any imminently hazardous chemical substance or mix with respect to which the EPA administrator has taken action pursuant to section 7 of the Toxic Substances Control Act (15 U.S.C. § 2601 et seq.).

HAZUS

Hazards United States

Historic Property

Any prehistoric or historic district, site, building, structure, or object included in or eligible for inclusion in the National Register of Historic Places, including artifacts, records, and remains which are related to such district, site, building, structure, or object [16 U.S.C. § 470(w) (5)].

Incident Action Plan (IAP)

An oral or written plan containing general objectives reflecting the overall strategy for managing an incident. It may include the identification of operational resources and assignments. It may also include attachments that provide direction and important information for management of the incident during one or more operational periods.

Incident Command Post (ICP)

The field location at which the primary tactical-level, on-scene incident command functions is performed. The ICP may be collocated with the incident base or other incident facilities and is normally identified by a green rotating or flashing light.

Incident Command System (ICS)

A standardized on-scene emergency management construct specifically designed to provide for the adoption of an integrated organizational structure that reflects the complexity and demands of single or multiple incidents, without being hindered by jurisdictional boundaries. ICS is the combination of facilities, equipment, personnel, procedures, and communications operating with a common organizational structure, designed to aid in the management of resources during incidents. ICS is used for all kinds of emergencies and is applicable to small as well as large and complex incidents. ICS is used by various jurisdictions and functional agencies, both public and private, or organized field-level incident management operations.

Incident Commander (IC)

The individual responsible for all incident activities, including the development of strategies and tactics and the ordering and release of resources. The IC has overall authority and responsibility for conducting incident operations and is responsible for the management of all incident operations at the incident site.

Incident Management Team (IMT)

The incident commander and appropriate command and general staff personnel assigned to an incident.
Incident Mitigation

Actions taken during an incident designed to minimize impacts or contain the damages to property or the environment.

Incident

An occurrence or event, natural or human-caused that requires an emergency response to protect life or property. Incidents can, for example, include major disasters, emergencies, terrorist attacks, terrorist threats, wildland and urban fires, floods, hazardous materials spills, nuclear accidents, aircraft accidents, earthquakes, hurricanes, tornadoes, tropical storms, war-related disasters, public health and medical emergencies, and other occurrences requiring an emergency response.

Infrastructure

The manmade physical systems, assets, projects, and structures, publicly and/or privately owned, that are used by or provide benefit to the public. Examples of infrastructure include utilities, bridges, levees, drinking water systems, electrical systems, communications systems, dams, sewage systems, and roads.

Initial Actions

The actions taken by those responders first to arrive at an incident site.

Initial Response

Resources initially committed to an incident.

In-kind Donations

Donations other than cash (usually materials or professional services) for disaster survivors.

Joint Field Office (JFO)

A temporary federal facility established locally to provide a central point for federal, state, local, and tribal executives with responsibility for incident oversight, direction, and/or assistance to effectively coordinate protection, prevention, preparedness, response, and recovery actions. The JFO will combine the traditional functions of the JOC, the FEMA disaster field office (DFO), and the JIC within a single federal facility.

Joint Information Center (JIC)

A facility established to coordinate all incident-related public information activities. It is the central point of contact for all news media at the scene of the incident. Public information officials from all participating agencies should collocate at the JIC.

Joint Information System (JIS)

Integrates incident, information and public affairs into a cohesive organization designed to provide consistent, coordinated, timely information during a crisis or incident operations. The mission of the JIS is to provide a structure and system for developing and delivering coordinated interagency messages; developing, recommending, and executing public information plans and strategies on behalf of the IC advising the IC concerning public affairs issues that could affect a response effort; and controlling rumors and inaccurate information that could undermine public confidence in the emergency response effort.
Joint Operations Center (JOC)

The JOC is the focal point for all federal investigative law enforcement activities during a terrorist or potential terrorist incident or any other significant criminal incident, and is managed by the SFLEO. The JOC becomes a component of the JFO when the NRF is activated.

Jurisdiction

A range or sphere of authority. Public agencies have jurisdiction at an incident related to their legal responsibilities and authorities. Jurisdictional authority at an incident can be political or geographical (e.g., city, county, tribal, state, or federal boundary lines) or functional (e.g., law enforcement, public health).

Liaison Officer

A member of the command staff responsible for coordinating with representatives from cooperating and assisting agencies.

Local Government

A county, municipality, city, town, township, local public authority, school district, special district, intrastate district, council of governments (regardless of whether the council of governments is incorporated as a nonprofit corporation under state law), regional or interstate government entity, or agency or instrumentality of a local government; an Indian tribe or authorized tribal organization; or a rural community, unincorporated town or village, or other public entity. (As defined in section 2(10) of the Homeland Security Act of 2002, Public Law 107-296, 116 Stat. 2135, et seq. (2002).)

Major Disaster

As described by the Stafford Act, any natural catastrophe (including any hurricane, tornado, storm, high water, wind-driven water, tidal wave, tsunami, earthquake, volcanic eruption, landslide, mudslide, snowstorm, or drought) or, regardless of cause, any fire, flood, or explosion, in any part of the United States, which in the determination of the president causes damage of sufficient severity and magnitude to warrant major disaster assistance under this act to supplement the efforts and available resources of states, local governments, and disaster relief organizations in alleviating the damage, loss, hardship, or suffering caused thereby.

Material Management

Requisitioning and sourcing (requirements processing); acquisition, asset visibility (resource tracking), receipt, storage, and handling; security and accountability; inventory, deployment, issue, and distribution; and recovery, reuse, and disposition.

Mitigation

Activities designed to reduce or eliminate risks to persons or property or to lessen the actual or potential effects or consequences of an incident. Mitigation measures may be implemented prior to, during, or after an incident. Mitigation measures are often developed in accordance with lessons learned from prior incidents. Mitigation involves ongoing actions to reduce exposure to, probability of, or potential loss from hazards. Measures may include zoning and building codes, floodplain buyouts, and analysis of hazard-related data to determine where it is safe to build or locate temporary facilities. Mitigation can include efforts to educate governments, businesses, and the public on measures they can take to reduce loss and injury.
Mobilization Center

An off-site temporary facility at which response personnel and equipment are received from the point of arrival and are pre-positioned for deployment to an incident logistics base, to a local staging area, or directly to an incident site, as required. A mobilization center also provides temporary support services, such as food and billeting, for response personnel prior to their assignment, release, or reassignment and serves as a place to out-process following demobilization while awaiting transportation.

Mobilization

The process and procedures used by all organizations – federal, state, local, and tribal – for activating, assembling, and transporting all resources that have been requested to respond to or support an incident.

Multijurisdictional Incident

An incident requiring action from multiple agencies that each have jurisdiction to manage certain aspects of an incident. In ICS, these incidents will be managed under unified command.

Mutual Aid Agreement

Written agreement between agencies, organization, and/or jurisdictions that they will assist one another on request by furnishing personnel, equipment, and/or expertise in a specified manner.

National Disaster Medical System (NDMS)

A coordinated partnership between US DHS, HHS, DOD, and the U.S. Department of Veterans Affairs established for the purpose of responding to the needs of victims of a public health emergency. NDMS provides medical response assets and the movement of patients to health care facilities where definitive medical care is received when required.

National Incident Management System (NIMS)

A system mandated by HSPD-5 that provides a consistent, nationwide approach for federal, state, local, and tribal governments; the private sector; and NGOs to work effectively and efficiently together to prepare for, respond to, and recover from domestic incidents, regardless of cause, size, or complexity. To provide for interoperability and compatibility among federal, state, local, and tribal capabilities, the NIMS includes a core set of concepts, principles, and terminology. HSPD-5 identifies these as the ICS; multiagency coordination systems; training; identification and management of resources (including systems for classifying types of resources); qualification and certification; and the collection, tracking, and reporting of incident information and incident resources.

National Response Center

A national communications center for activities related to oil and hazardous substance response actions. The National Response Center, located at US DHS/USCG Headquarters in Washington, DC, receives and relays notices of oil and hazardous substances releases to the appropriate federal OSC.

National Response System

Pursuant to the NCP, the mechanism for coordinating response actions by all levels of government (40 CFR § 300.21) for oil and hazardous substances spills and releases.
National Response Team (NRT)

The NRT, comprised of the 16 federal agencies with major environmental and public health responsibilities, is the primary vehicle for coordinating federal agency activities under the NCP. The NRT carries out national planning and response coordination and is the head of a highly organized federal oil and hazardous substance emergency response network. EPA serves as the NRT chair, and US DHS/USCG serves as vice chair.

National Security and Emergency Preparedness (NS/EP)

Telecommunications. NS/EP telecommunications services are those used to maintain a state of readiness or to respond to and manage any event or crisis (local, national, or international) that causes or could cause injury or harm to the population or damage to or loss of property, or could degrade or threaten the NS/EP posture of the United States.

National Special Security Event (NSSE)

A designated event that, by virtue of its political, economic, social, or religious significance may be the target of terrorism or other criminal activity.

National Strike Force

The National Strike Force consists of three strike teams established by US DHS/USCG on the Pacific, Atlantic, and Gulf coasts. The strike teams can provide advice and technical assistance for oil and hazardous substances removal, communications support, special equipment, and services.

Natural Resources

Natural resources include land, fish, wildlife, domesticated animals, plants, biota, air, water. Water means salt and fresh water, surface and ground water, including water used for drinking, irrigation, aquaculture, and recreational purposes, as well as in its capacity as fish and wildlife habitat, including coral reef ecosystems as defined in 16 U.S.C. 64501. Land means soil, surface and subsurface minerals, and other terrestrial features.

Nongovernmental Organization (NGO)

A nonprofit entity that is based on interests of its members, individuals, or institutions and that is not created by a government, but may work cooperatively with government. Such organizations serve a public purpose, not a private benefit. Examples of NGOs include faith-based charity organizations and the American Red Cross.

Nuclear Incident Response Team (NIRT)

Created by the Homeland Security Act to provide US DHS with a nuclear/radiological response capability. When activated, the NIRT consists of specialized federal response teams drawn from DOE and/or EPA. These teams may become US DHS operational assets providing technical expertise and equipment when activated during a crisis or in response to a nuclear/radiological incident as part of the US DHS federal response.

On-scene Coordinator (OSC)

See federal on-scene coordinator.
Preparedness

The range of deliberate, critical tasks and activities necessary to build, sustain, and improve the operational capability to prevent, protect against, respond to, and recover from domestic incidents. Preparedness is a continuous process involving efforts at all levels of government and between government and private-sector and nongovernmental organizations to identify threats, determine vulnerabilities, and identify required resources.

Prevention

Actions taken to avoid an incident or to intervene to stop an incident from occurring. Prevention involves actions taken to protect lives and property. It involves applying intelligence and other information to a range of activities that may include such countermeasures as deterrence operations; heightened inspections; improved surveillance and security operations; investigations to determine the full nature and source of the threat; public health and agricultural surveillance and testing processes; immunizations, isolation, or quarantine; and, as appropriate, specific law enforcement operations aimed at deterring, preempting, interdicting, or disrupting illegal activity and apprehending potential perpetrators and bringing them to justice.

Principal Federal Official (PFO)

The federal official designated by the secretary of US DHS to act as his/her representative locally to oversee, coordinate, and execute the secretary's incident management responsibilities under HSPD-5 for presidentially-declared disasters.

Private Sector

Organizations and entities that are not part of any governmental structure, including for-profit and not-for-profit organizations, formal and informal structures, commerce and industry, private emergency response organizations, and private voluntary organizations.

Public Assistance Program

The program administered by FEMA that provides supplemental federal disaster grant assistance for debris removal and disposal, emergency protective measures, and the repair, replacement, or restoration of disaster damaged, publicly owned facilities and the facilities of certain private nonprofit organizations.

Public Health

Protection, safety, improvement, and interconnections of health and disease prevention among people, domestic animals and wildlife.

Public Information Officer (PIO)

A member of the command staff responsible for interfacing with the public and media or with other agencies with incident-related information requirements.

Public Works

Work, construction, physical facilities, and services provided by governments for the benefit and use of the public.

Radiological Emergency Response Teams (RERTs)

Teams provided by EPA's Office of Radiation and Indoor Air to support and respond to incidents or sites containing radiological hazards. These teams provide expertise in
Radiation monitoring, radionuclide analyses, radiation health physics, and risk assessment. RERTs can provide both mobile and fixed laboratory support during a response.

Recovery

The development, coordination, and execution of service and site restoration plans for impacted communities and the reconstitution of government operations and services through individual, private sector, nongovernmental, and public assistance programs that: identify needs and define resources; provide housing and promote restoration; address long term care and treatment of affected persons; implement additional measures for community restoration; incorporate mitigation measures and techniques, as feasible; evaluate the incident to identify lessons learned; and develop initiatives to mitigate the effects of future incidents.

Regional Response Teams (RRTs)

Regional counterparts to the national response team, the RRTs comprise regional representatives of the federal agencies on the NRT and representatives of each state within the region. The RRTs serve as planning and preparedness bodies before a response, and provide coordination and advice to the federal OSC during response actions.

Resources

Personnel and major items of equipment supplies, and facilities available or potentially available for assignment to incident operations and for which status is maintained. Resources are described by kind and type and may be used in operational support or supervisory capacities at an incident or at an EOC.

Rumor

Incomplete, inaccurate, and ambiguous information.

Situation Assessment

The evaluation and interpretation of information gathered from a variety of sources (including weather information and forecasts, computerized models, GIS data mapping, remote sensing sources, ground surveys, etc.) that, when communicated to emergency managers and decision makers, can provide a basis for incident management decision-making.

Special Populations

See “access and functional needs populations.”

State

Any state of the United States, the District of Columbia, the Commonwealth of Puerto Rico, the U.S. Virgin Islands, Guam, American Samoa, the Commonwealth of the Northern Mariana Islands, and any possession of the United States. (As defined in section 2(14) of the Homeland Security Act of 2002, Public Law 107-296, 116 Stat. 2135, et seq. (2002).)

Strategic:

Strategic elements of incident management are characterized by continuous, long-term, high-level planning by organizations headed by elected or other senior officials. These elements involve the adoption of long-range goals and objectives, the setting of
priorities, the establishment of budgets and other fiscal decisions, policy development, and the application of measures of performance or effectiveness.

**Strategic Plan**

A plan that addresses long-term issues such as impact of weather forecasts, time-phased resource requirements, and problems such as permanent housing for displaced disaster victims, environmental pollution, and infrastructure restoration.

**Telecommunications Service Priority (TSP) Program**

The NS/EP TSP Program is the regulatory, administrative, and operational program authorizing and providing for priority treatment (i.e., provisioning and restoration) of NS/EP telecommunications services. As such, it establishes the framework for NS/EP telecommunications service vendors to provide, restore or otherwise act on it priority basis to ensure effective NS/EP telecommunications services.

**Telecommunications**

The transmission, emission, or reception of voice and/or data through any medium by wire, radio, other electrical electromagnetic or optical means. Telecommunications includes all aspects of transmitting information.

**Terrorism**

Any activity that (1) involves an act that (a) is dangerous to human life or potentially destructive of critical infrastructure or key resources; and (b) is a violation of the criminal laws of the United States or of any state or other subdivision of the United States; and (2) appears to be intended (a) to intimidate or coerce a civilian population; (b) to influence the policy of a government by intimidation or coercion; or (c) to affect the conduct of a government by mass destruction, assassination, or kidnapping.

**Threat**

An indication of possible violence, harm, or danger.

**Transportation Management**

Transportation prioritizing, ordering, sourcing, and acquisition; time-phasing plans; fleet management; and movement coordination and tracking.

**Tribe**

Any Indian tribe, band, nation, or other organized group or community, including any Alaskan native village as defined in or established pursuant to the Alaskan Native Claims Settlement Act (85 Stat. 688) [43 U.S.C.A. and 1601 et seq.], that is recognized as eligible for the special programs and services provided by the United States to Indians because of their status as Indians.

**Unaffiliated Volunteer**

An individual who is not formally associated with a recognized voluntary disaster relief organization; also known as a "spontaneous" or "emergent" volunteer.

**Unified Command**

An application of ICS used when there is more than one agency with incident jurisdiction or when incidents cross political jurisdictions. Agencies work together through the designated members of the agency at a single ICP and to establish a common set of objectives and strategies and a single incident action plan.
Uniform Disaster Situation Report (UDSR)

The damage assessment reporting form.

United States

The term "United States," when used in a geographic sense, means any state of the United States, the District of Columbia, the Commonwealth of Puerto Rico, the U.S. Virgin Islands, Guam, American Samoa, the Commonwealth of the Northern Mariana Islands, any possession of the United States, and any waters within the jurisdiction of the United States. (As defined in section 2(16) of the Homeland Security Act of 2002, Public Law 107-296, 116 Stat. 2135, et seq. (2002).)

Unsolicited Goods

Donated items offered by and/or sent to the incident area by the public, the private sector, or other source, that have not been requested by government or nonprofit disaster relief coordinators.

Urban Search and Rescue

Operational activities that include locating, extricating, and providing on-site medical treatment to victims trapped in collapsed structures.

Voluntary Organizations Active in Disaster (VOAD)

A VOAD coordinates planning efforts by the many voluntary organizations responding to disaster.

Volunteer and Donations Coordination Center

Facility from which the volunteer and donations coordination team operates. It is best situated in or close by the SEOC for coordination purposes. Requirements may include space for a phone bank, meeting space, and space for a team of specialists to review and process offers.

Volunteer

Any individual accepted to perform services by an agency that has authority to accept volunteer services when the individual performs services without promise, expectation, or receipt of compensation for services performed. (See, for example, 16 USC § 742f(c) and 29 CFR § 553.101.)

Weapon of Mass Destruction (WMD)

As defined in Title 18, U.S.C § 2332a: (1) any explosive, incendiary; or poison gas, bomb, grenade, rocket having a propellant charge of more than 4 ounces, or missile having an explosive or incendiary charge of more than one-quarter ounce, or mine or similar device; (2) any weapon that is designed or intended to cause death or serious bodily injury through the release, dissemination, or impact of toxic or poisonous chemicals or their precursors; (3) any weapon involving a disease organism; or (4) any weapon that is designed to release radiation or radioactivity at a level dangerous to human life.

Wireless Priority Service (WPS)

WPS allows authorized NS/EP personnel to gain priority access to the next available wireless radio channel to initiate calls during an emergency when carrier channels may be congested.
